FAIR USE AND REPLICATION

No commercial or for-profit use of any part of this work is allowed without the author's permission. Not-for-profit organizations, government agencies, and educational institutions as a part of their educational programs, may extract from this work for interpretive, educational, or administrative purposes. Scholastic or other individual researchers may copy selections for personal reference and may quote from this work, following best practices of academic research.

With the exception of illustrations that are in the Public Domain no illustration in this work may be reproduced without the permission of the author; or, for illustrations credited to sources other than government agencies, without the permission of the indicated source.

Replication of this work in its entirety is permitted to create a conservational copy to mitigate physical or digital decay, or to migrate to different software, or medium not now in existence, when the technology to use the original digital copy is obsolete. A documentary paper copy of this work is permitted for reference use or to preempt the loss of the work due to technological change that no longer permits this work to function in a digital medium. No copy may be reproduced for sale.
THE GRAND CANON
1548 • 2012
"... many of the mountains, plateaus, valleys, cañons, and streams were unknown and unnamed."

— John Wesley Powell
A DIRECTORY TO 48,600 PUBLISHED ITEMS AND NEW CONTENT ON

THE GRAND CANYON & LOWER COLORADO RIVER REGION

Arizona Nevada California Baja California Sonora
SOUTHWESTERN UNITED STATES – NORTHWESTERN MEXICO

by Earle E. Spamer

- Lists more than 48,600 items published worldwide in 55 languages over 464 years
- Uniquely numbered citations in 32 subject areas, cross-listed to standard-reference lists
- Introductory guide, illustrated essays, commentaries, and surveys of comparable bibliographical works
- Special compilations on the term “Grand Canyon” as used in geographical nomenclature, analogy and metaphor
- Complements the Grand Canyon Association field-searchable bibliography online, WWW.GRANDCANYONBIBLIO.ORG
THE GRAND CANON:

A directory to 48,600 published items and new content on the Grand Canyon and lower Colorado River region (Arizona, Nevada, California, Baja California, Sonora), southwestern United States—northwestern Mexico

The Grand Canon — 1st ed.
Computer optical disc: col. ill.; 4 3/4 in.

ABOUT THE FRONTISPIECE: SEE PAGE IV
THE GRAND CANON is a hybrid document, by design as much as by necessity. It is a digital document, searchable, and large enough to warrant the use of embedded bookmarks and hyperlinks. The layout also preserves a booklike appearance even while individual pages host hyperlinks and color that interweave the bookish feel with characteristics of a webpage. Some users with wide, graphics-oriented computer monitors may wish to use the PDF’s “two-up” page-display mode with “show cover page” to place the pages properly side by side onscreen and still be able to read them comfortably (see also Note Regarding Pagination, below). Other users will view the document as single-page displays. The bibliography text is in a reasonable type size for readability. The overall object is to reinstitute the monographic presentation and contiguous feel of the whole bibliography, while incorporating introductory and ancillary material that had originally been envisioned for a website or interactive CD-ROM. The digital format of this work allows users to search within it and extract from it. If this were a financially unrestricted work, it would be presented as multiple printed volumes as well as a digital work. See inside the front cover for statement on Fair Use and replication.

NOTE REGARDING PAGINATION

This document is paginated in book format, in the event that some users may produce on paper double-sided partial reference copies or a double-sided conservational copy of the whole. Individual sections begin on odd-numbered pages, conventionally the right side of a double-page spread.

NOTE REGARDING PDF

The Portable Document Format (PDF) file was created using Adobe Acrobat® 9 Pro. Pages can be enlarged without loss of clarity, a benefit for those with less acute vision, or reduced for those who prefer a more condensed, contiguous apprearance.

The conversion process has introduced occasional minor features that may reduce the aesthetic qualities of colors or the balance or symmetry of some drawn objects like rules and font proportions; these minor variances do not reflect the original design by the author. Not affected are pagination, layout of the bibliography itself, and hyperlink functions. See also Late Note on p. v.

1 The enumerated notes throughout this document are positioned as footnotes rather than endnotes. Many of the footnotes contain hyperlinks to citations within the bibliography, and to other parts of the bibliography, which would be rendered less useful if they were not closely associated with the text that refers to them. Some users may print from these pages, too; thus the appended notes will accompany those selections.
About the Frontispiece

Major Powell led the first geographical and geological exploration of the Green and Colorado Rivers through the canyon lands in 1869. Partly as the result of his accounts of the expedition, embellished for more popular reading, artists sometimes romantically misportrayed the explorers’ river journey through canyon defiles.

Quotation:

LATE NOTE ABOUT THE 1st EDITION

The First Edition of *The Grand Canon* was prepared in PDF format in three sections. This called for the integration of supplementary tables of contents and other lists, which though they are irregular, are necessary and clearly marked. The division and supplementation are needed because, during the final preparation of this edition, an unestablished limit in the size of the original document was unknowingly breached, causing failure to compile new PDF documents. The implementation of three separate sections resolved the immediate problem, but it detached many of the embedded navigational hyperlinks. The work-around restored many of the hyperlinks, but this affected aesthetic presentation in making the arrangement of contents in sections not as seamless to follow as originally intended. Inasmuch as a solution to this technological problem is not forthcoming, the First Edition is distributed with these fixes in place.

Non-working links will be encountered occasionally. Most of them contain visible information that can be used to digitally locate the source within the document by using the computer’s “search” or “find” features. The remainder of non-working links are not consequential for working with the Bibliography. A revised edition may be prepared at such time that the technological problem is resolved.

This document had already been purposely designed in book-page format, thus pagination is recorded in the tables and lists. A consolidated, paginated table of contents for the whole document appears as the “Navigation Page” that begins on page vii. For the *Bibliography* itself, a separately paginated table of contents is on page 358. Likewise, lists of illustrations have manually-recorded paginations. If the user so wishes, these may be relied upon without having to resort to using hyperlinks for navigation. These also will be the means of access for parts of this document that are printed to paper or are in a digital format that does not support bookmarks and hyperlinks.

E.E.S.
April 2012
[The brilliant star Vega seems] to descend in a gentle curve, as though the bright sky in which the stars are set was spread across the cañon, resting on either wall, and swayed down by its own weight. The stars appear to be in the cañon.

... it seems a long way up to the world of sunshine and open sky, and a long way down to the bottom of the cañon glooms.

... you can hardly cast aside the belief that they are works of Titanic art.

John Wesley Powell

"Black Cañon."
[Near the site of present-day Hoover Dam.]
By T.W. Egloffstein, from a sketch by Lieut. Ives.

Joseph C. Ives, Report Upon the Colorado River of the West
(Government Printing Office, Washington, 1861), General Report, Plate V.
F. W. von EGLOFFSTEIN DRAWS THE CANYON, 1858
“It is somewhat unfortunate that there is a prevalent idea that in some way an essential part of the grandeur of the Grand Cañon is the narrowness of its defiles. Much color has been given to this notion by the first illustrations of the cañon from the pencil of Egloffstein in the celebrated report of Lieutenant Ives. Never was a great subject more artistically misrepresented or more charmingly belittled. Nowhere in the Kaibab section is any such extreme narrowness observable, and even in the Uinkaret section the width of the great inner gorge is a little greater than the depth.”

**TOP TO BOTTOM:**

“**Big Cañon from near Hualpais Spring.”** (Panoramic View No. 5)

“**Big Cañon near Diamond River.”** (Panoramic View No. 6)

“**Big Cañon from Colorado Plateau.”** (Panoramic View No. 7)

“**Cañon of Cataract Creek and Flax River.”** (Panoramic View No. 8)

“Surely no other region in the world… can exhibit anything comparable to it.”

— Clarence Edward Dutton

Tertiary History of the Grand Cañon District
Illustration (as above) placed as banners in front-matter sections and as major-section separators in bibliography:

Photo of Grand Canyon–Colorado River on cover, and main title-page (page i):
View southwestward from Clear Creek Trail toward Colorado River. The scene overlooks the confluence of Bright Angel Creek (right side of river), and South Kaibab Trail and River Trail (on opposite side of river). The Colorado is seen flowing in its natural, namesake color, the result now only of storm-delivered sediments of tributaries downstream from Glen Canyon Dam.

**Jeannette Spamer, Grand Canyon, 1984.** [Earle Spamer’s mother.]
“The marvellous story of Cardinas [Cardéñas], that had formed for so long a time the only record concerning this rather mythical locality, was rather magnified than detracted from by the accounts of one or two trappers, who professed to have seen the cañon, and propagated among their prairie companions incredible accounts of the stupendous character of the formation, and it became a matter of interest to have this region explored, and to lay down the positions of the Colorado and its tributaries along the unknown belt of country north of the 35th parallel.”

Joseph C. Ives

*Report Upon the Colorado River of the West . . . .*  
“The conditions necessary to the formation of cañons are exceptional in the world’s history.”

John Wesley Powell

The mostly horizontal strata of the Grand Canyon produce an appealing symmetry to its eroded forms, well illustrated on maps.

“As they will describe it back home.”

“The Grand Cañon is fortunately indescribable . . . .”

Raising the Flag

Hoover Dam

1 May 1996

The world’s largest flag, commissioned by “Ski” Demski (died 2002) and sewn in Pennsylvania, has been displayed in numerous venues. It was hoisted on Hoover Dam to commemorate the crossing of the dam by the Olympic relay torch.

The flag measures $505 \times 255$ feet; weighs 3000 pounds. Each star is 17 feet.

(Photos U.S. Bureau of Reclamation)
Looking Down on the Grand Canyon — Then and Now

(BELOW) False-color satellite imagery of the greater Grand Canyon region, on the Colorado River between a point several miles downstream from Lees Ferry (*upper right*) to the Grand Wash Cliffs and eastern Lake Mead (*left*). Dark-green areas indicate heavier vegetation; Kaibab Plateau is prominent. (U.S. Geological Survey)
THE GRAND CANON begins a new series for this bibliography. In published formats under other titles it has appeared in several editions from 1981 to the frequently-updated Internet Edition begun in 2000. The Internet Edition was posted on the Grand Canyon Association website in January 2000 implementing files that had been completed in September 1999. Updates to that online bibliography have been made at frequent, unscheduled intervals. Preparations for THE GRAND CANON began during 2010, to restore the monographic presentation of the entire bibliography. It is updated concurrently but with improvements over the Internet- and previously-published print editions. See also the section herein, “History and Methodology”.
Predecessors to the First Edition of *The Grand Canon*

Earle E. Spamer, compiler (*with* George H. Billingsley, William J. Breed, Robert C. Euler, and Grace Keroher)

Arranged in 10 parts. Print format only, paper wraps, perfect-bound.

[See Appendix A to Part 1 in the present bibliography for contents and arrangement of this edition.]

Grand Canyon, Arizona: Grand Canyon Natural History Association, *Monograph 8*, 12 separately paginated parts, with separately paginated front matter, in one volume, [370 pp.]

Arranged in 12 parts with additional special sections. Distributed in print format (loose-leaf, with binder and separator tabs, 1,000 copies), on microfiche (25 copies), and digitally on five ASCII-format 5.25-inch disks (25 copies). Contributors added introductory essays for parts of the bibliography or citations, or both.

[See Appendix B to Part 1 in the present bibliography for collated pagination sequence and tab placements for this edition and Supplement 1.]

Earle E. Spamer, compiler (*with* Daniel F. Cassidy and John Irwin)

Distributed in print format (loose-leaf, 1,000 copies), on microfiche (25 copies), and digitally on two ASCII-format 5.25-inch disks (25 copies). No more supplements prepared.

[See Appendix B to Part 1 in the present bibliography for collated pagination sequence and tab placements for 1990 edition and Supplement 1.]

XLVI

Internet Edition.
Earle E. Spamer, compiler and editor (with contributors Richard D. Quartaroli and Daniel F. Cassidy)

Arranged in 34 parts; later reduced to 32 parts. Online only as a searchable database. First posted January 2000, and continuously updated thereafter. [N.B.: Two printed copies of the first state of the online edition were made by Spamer, 1,453 pp. One was given to the Special Collections and Archives, Cline Library, Northern Arizona University, Flagstaff (call no. F788.S636 2000); the other, bound, is in the author’s possession.]

[See Appendix C to Part 1 in the present bibliography for contents and arrangement of the Internet Edition.]

First Edition.
Earle E. Spamer

Philadelphia: Earle E. Spamer (A Raven’s Perch Digital Production)

Digital product—Portable Document Format (PDF).

Updated bibliographical listing of items published worldwide in 55 languages. Enumerated and cross-listed to previous bibliographies and standard-reference lists. Extra features include introduction, commentaries, surveys of comparable works, and a nomenclatural appendix on the term “Grand Canyon” as used in geographical nomenclature, analogy and metaphor. Expanded and improved layout. [The subtitle published-item count will increase as the bibliography grows.]

Monographic version in 32 parts, periodically updated and concurrent with the Internet Edition. Updated and distributed periodically as searchable PDF (Portable Document Format) digital documents with hyperlinks. Separately dated versions, some with variant subtitles that update descriptive elements of subtitles. First formal publication on CD-ROM April 2012.

[See Navigation Page in the present bibliography for contents and arrangement.]

[Note: An informal, test release was prepared in February 2011 as the “Comprehensive Edition” and privately distributed on CD-ROM to a few users. It is not one of the sequence of formal editions.]
The artificial stocking of trout into perennial streams of the Grand Canyon was an early effort to establish and promote fisheries. This view shows a park ranger on the Clear Creek Trail with canisters of trout fry. The effort was repeated when flash floods swept populations away. Today, the trout of side streams of the canyon are considered an invasive species not naturally belonging in the national park. In the mainstem Colorado River, however, trout populations survive from individuals that are stocked in the “Lees Ferry” reach of the river between Glen Canyon Dam and Lees Ferry, within the Glen Canyon National Recreation Area, where a recreational fishery is widely promoted.
... and Now

The humpback chub is an endangered fish that once was widespread in the Colorado River. Since the building of Glen Canyon Dam, the physical conditions favored by the chubs have reduced their populations in Grand Canyon, where now it is chiefly resident in the perennial portion of the Little Colorado River. Recent efforts have been underway to translocate chubs to favorable locales elsewhere in Grand Canyon; particularly Shinumo and Havasu Creeks. This photo was taken on 23 June 2010 when a second spawning group was taken to Shinumo Creek. The photo description notes further, “Prior to the translocation, a 13-person crew led by [Grand Canyon National Park] fisheries biologist Brian Healy spent six days surveying the translocation reaches of Shinumo Creek to get population estimates of [previously placed] humpback chub and other native fish, and removing nonnative rainbow trout.”
The Grand Canon

In Perspective

“I should be exceding glad, Sir, if you could be prevaild on to furnish me with a Catalogue of your Publications. Those of them that I am posses’d of are some of the most Ageeable Ornaments of my Library.”

—Mather Byles to Benjamin Franklin, [1775–1776]

The Papers of Benjamin Franklin, www.franklinpapers.org, sponsored by The American Philosophical Society and Yale University, digital edition by the Packard Humanities Institute

(Original document in New England Historic Genealogical Society, Boston)

“. . . all is there that ought to be, it matters little how much is there that ought not: the excess may help, but cannot hurt . . .”

“The grand canon of composition and construction” in law proceedings.

—Encyclopaedia Britannica (1842), Volume 2, p. 545

“Seems rather pointless to write this to you. I have no reason other than it might fit into some one’s story some time.”

—Robert N. Atmore

Letter to the Editor
The Desert Magazine, Vol. 9, no. 3 (January 1946), p. 31. [Item no. 17.1151]

“. . . the conscientious bibliographer must record impartially both treasures and trash, the enduring and the ephemeral.”

—Louise M. Hinchliffe
Librarian, Grand Canyon National Park Research Library (retired)

A Directory to 48,600 Published Items
and New Content on

The Grand Canyon & lower Colorado River region

Arizona  Nevada  California  Baja California  Sonora

Southwestern United States–Northwestern Mexico
With Appreciation To

LOUISE M. HINCHLIFFE

Grand Canyon National Park Research Library
(retired 1985)

Her commitment to the National Park Service for nearly forty years greatly enhanced the community of Grand Canyon, enriched visitor experiences, met administrative needs of the national park, and widened scholastic perspectives of the greater Grand Canyon region. Her diligence benefited an international roster of researchers, from established scholars to passing inquirers. How many footnotes, citations and facts are attributable to her are inestimable.
THE GRAND CANON is an accounting of publications that relate wholly or in part to the Grand Canyon of the Colorado River in Arizona, and to the lower Colorado River region of Arizona, Nevada, and California (southwestern United States) and Baja California and Sonora (northwestern Mexico). It lists in 32 subject areas more than 48,600 items published worldwide since 1548 (454 years), in 55 languages. They embrace the humanities; social, natural, physical, and environmental sciences; health and safety; engineering and technology; administrative oversight; legislative and judicial affairs; concerns of public-interest and advocacy organizations; interests and activities of indigenous peoples; and works for and by youth. Listed publications are in inkprint, special media for the visually impaired, and audio, audio-visual and some digital media. They have been published privately and in popular, academic, commercial and official venues. This is the evidentiary record of elective, creative, sponsored and officially authorized activities of individuals, organizations, institutions and government agencies. In scope and content no comparable directory exists for other historical, natural, recreational, or utilitarian areas overseen by federal and state agencies. New content herein comprises overviews, essays, surveys of comparative bibliography, and comprehensive compendia on geographical and literary applications of the appellation “Grand Canyon”.

This is also a unique reference tool for resource managers who work within federal, state and other jurisdictions covered by this work, and for professionals in public-advocacy and not-for-profit organizations that have concerns in this region. The citations document for agency decision-makers sources that record resources and the utilization of the lands under their purview. Trends in personal, professional and official interests may be detected in analyzing citations spanning decades and centuries. Subsets of citations may serve as foundations for specialized and applied uses, scholarly studies, and administrative record.

See map in the section on Geographical Coverage.
This work began with compilations made in 1974. Since then it has migrated through numerous informal revisions and private distributions, and through ever larger re-edited formal publications in inkprint, microfiche, and digital media during 1981–1993. In 2000 a greatly revised Internet Edition was posted to the World Wide Web; it is a field-searchable database (www.grandcanyonbiblio.org) sponsored by the Grand Canyon Association, publisher of the previous editions. In 2010 the author began work on reinstituting a monographic format, the size of which now pragmatically mandates its production in digital format. THE GRAND CANON offers a complete bibliography, browsable and readable by users who require such contiguous access. Although it is a wholly new work, it complements the online Internet Edition that speedily filters user-specified queries.

THE GRAND CANON’s principal strategy is to offer users a wide platform of working positions. In many cases, such as when users are new to a field, only a perfunctory review of everything that is available can provide a picture of what has been done. It lists everything that may be acquired through libraries or commercial and web-based sources, for any purpose the user has in mind. THE GRAND CANON is divided into many topical sections that anticipate diverse fields of interest that users will want to examine. Users with specific agendas may wish to cull from it subsets of publication data that meet criteria of special projects or needs. Certain inquiries will of course be expediently answered in the Internet Edition; for example, lists for specific ranges of publication dates, or everything by a certain author whether they are listed as a first or subsequent author among many. But the overall purpose of THE GRAND CANON is to offer a definitive, comprehensive, contiguous list that holds its best uses as a browsing or “reading” bibliography; the documentary it is designed to be. There are decided advantages to speedily answered inquires through the online database, yet very focused lines of inquiry by those who are afforded the time for more meticulous research will be answered by using the bibliography in its contiguous whole. Complementing the power of the Internet Edition, THE GRAND CANON provides the unobscured “big picture” that is not seen online.

THE GRAND CANON serves as a comprehensive register of publications about the Grand Canyon–lower Colorado River region, and as a categorized reading list with which users may identify the items that will be of value to their work. The appended texts of commentary and informational compilations, including detailed cross-listings to earlier bibliographies and standard-reference lists, provide added value for historians, researchers and other readers across a broad spectrum of activities. Together the components of THE GRAND CANON view in fine historical, cultural, and administrative detail an immense body of work published by thousands of writers, artists, officials, institutions and businesses, rooted now in six centuries.
THE GRAND CANON

A “FOREWORD”
IN PICTURES AND SCRAPS

by Miss Gardner?

Introduced by Earle E. Spamer

One of the thrills in searching for Grandcanyoniana is finding something — anything, actually — from the early days of travel here. Some people recorded their experiences and impressions; fewer still photographed them.

A thin remnant of scrapbook that I acquired some years ago preserves views from one group of travelers in 1903. It is a representative slice of THE GRAND CANON, comprising a first-person record of experiences. It is a snippet of Grand Canyon history, one hitherto not seen publicly. It captures the flavor any any number of published works; it foretells the kinds of things that will be met in them and it frames a unique piece of Grand Canyon’s cultural history. And to set the pace for THE GRAND CANON this foreword utilizes hyperlinks to connect the reader to other parts of this digital document.

3 A conjectural assessment. Read onward for clues.
The scrapbooker’s group had arrived at Grand Canyon just a few weeks after President Theodore Roosevelt’s visit to the canyon, when he had delivered the speech that contains his oft-quoted declaration that the Grand Canyon is one place that every American should see, encouraging all to visit the canyon and admonishing us to “Leave it as it is.”

Also included in the scrapbook are a few postcards and clippings from magazines of the day. The scrapbook’s few words sound a faint voice; they speak from a time that is now measured in centuries. Mostly pictures, these carefully pasted scraps deliver images of original presence; they guide our gray interpretations long after the fact. The pictures, postcards, and cutouts are, all in all, a preview of the raucus assembly of published items that are listed in THE GRAND CANON, which is why I tap our unknown scrapbooker to serve as the contributor of this pictorial foreword today. The places, the views, the people all represent portions of the published record for the Grand Canyon and the Colorado River.

This is one ordinary person’s record of what it is like to go to and experience the Grand Canyon—in 1903. The places and some characters are familiar, but the scrapbooker is anonymous—a great loss—yet their identity might be teased out of the meager clues left behind. THE GRAND CANON contains thousands of recollections, many of them even predating our scrapbooker’s, but this is a voice as yet unheard. We have a few pictures, and fewer still of this person’s own words in two brief postcards, along with other words borrowed from period magazines. From more than a century ago they allow us to participate in their experiences.

Our scrapbooker’s party traveled by train from the East, stopping en route to see the bare, sunwashed petrified forest along the Santa Fe Railway. Later they refreshed themselves trackside in the cooler mountain clime of northern Arizona, and they rode the new rail line from Williams to Grand Canyon. The El Tovar Hotel was still a couple of years in the making, and these tourists were conveyed east to “Captain” John Hance’s rude tent hotel. Presumably they had made their group travel arrangements far in advance as they seem to have “filled the house” at Hance’s—18 of

---

4 Roosevelt’s gave his speech on 6 May 1903. A reporter’s on-the-spot transcription was printed in The Coconino Sun (Flagstaff, Arizona), 9 May, p. 1; see Addenda herein for that transcript. The text differs somewhat from official versions and also from some later editorially altered quotes. See also, for example, two contrasting texts in full in: “I have come here to see the Grand Canyon . . .’ (by Theodore Roosevelt, introduction by Earle Spamer)”, The Ol’ Pioneer (Grand Canyon Historical Society), Vol. 8, no. 7 (Summer 1997), pp. 12-15 [Item 2.5479].
them, more or less; about half the group were women. The party went on foot and on
mules down Hance’s trail in Red Canyon to his midway camp, and on to the Colorado
River. Probably no one walked back up. They may even have gone into the canyon on
Bright Angel Trail, too.

This much we gather just from a railroad timetable, a few photographs,
postcards (two of them mailed), and some clippings. We see people’s faces, we see
some of what they saw, but we do not know who they were, these men and women.
Perhaps someday, serendipitously, a family historian may offer some answers. Still the
scrapbooker’s experiences are a valuable travelers’ record, which are published here in
a venue that was unimaginable in 1903. We may wonder what will be known in 2103.

A postcard depicting northern Arizona’s San Francisco Peaks was originally
sent to Dr. Julia McNutt, 6 265 Lexington Ave., New York. The postmark is partly
unprinted, but reads “& ASH FORK”, dated 12 July 1903 — mailed via the Santa Fe train
before the party left for Grand Canyon. Its brief message:

July 11, 03
On our way to Grand Canyon, Arizona. Moonlight
nights and such air and good times. J.G.G.

Another postcard had been mailed and, likewise given back to the sender,
added to the scrapbook. This is a view showing “Hance’s Trail”, mailed at Grand

---

5 A different number of people appear in each group photo. We do not know whether one of their
group was the photographer, or whether someone else tripped the shutter for any of the group
views.

6 Julia McNutt and her sister, Sarah, were physicians graduated from the Women’s Medical College in
New York; Sarah in 1877, Julia in 1883 (Medical Directory of the City of New York, 1900). In 1887,
the Drs. McNutt established the Babies’ Hospital in New York, and in 1889 both resigned from that
institution to take up positions in the New York Post-Graduate College, where Julia began the
Training School for Female Nurses (Sydney A. Halpen, American Pediatrics; the Social Dynamics of
The Medical News (Philadelphia), December 21, 1889, p. 706; Louisa C. Drouillard, “Women in the
890). The “two sister doctors” even had been noticed as far away as New Zealand (“Women as
Successful Physicians”, Tuapeka Times (Lawrence), February 18, 1888, p. 6).
Canyon on 18 July 1903, addressed to Mr. Frank L. Gardner of Poughkeepsie, New York. Its message:

*July 14—All serene. Father and I walked down the trail to the Colorado River—wonderful scenery—and rode back—Both feeling fine! J.G.G.*

Presumably, home for J.G.G. was the vicinity of New York City, as both of the mailed postcards were sent to the same area and, reacquired from their addressees, were placed in the scrapbook. But because the scrapbook was received in a fragmentary condition, we have no idea what may now be missing from it—more clues, perhaps. At the very least, the last of the surviving leaves shows that there had been two items pasted down, now gone.

One photograph was taken at the foot of Bright Angel Trail, suggesting that perhaps some or all of the group also made a second trip into the canyon, which would make their trip all the more interesting as most visitors did not repeat the long trail rides. The postcard written on July 14th was not postmarked until the 18th, plenty of time to languish, with no intervening Sunday when the post office would have been closed. This suggests that a number of days were spent along the South Rim. How long they remained at Hance’s before returning to the village is unknown, but there was ample time for a mounted day trip on Bright Angel Trail, too. Perhaps they stayed at the Bright Angel or the Cameron hotels as well as with Captain Hance. Perhaps the trip to Hance’s was a separate outing from a base at Grand Canyon village.

In the photographs (*seen later in this Foreword*) there are group pictures and, in those that depict or focus on individuals, all are of women. Alas, whether J.G.G. is one of them we do not know. That the scrapbooker is probably J.G.G. and is likely a woman is surmised also on the basis that one of the cards was sent to Dr. McNutt, in the women’s medical practice. The messages to Dr. McNutt and to Mr. Gardner in Poughkeepsie are not too personal, just keeping in touch. Whether the doctor was a professional or personal acquaintance cannot be said, but both cards seem to have been expected since there is no salutation and are signed only with initials.

---

7 Probably the Frank L. Gardner of Poughkeepsie who was in the New York insurance business and who later, 1916-1921, was a Republican member of the New York State Assembly.
We do not know J.G.G.’s identity; a relation of Frank L. Gardner maybe. Perhaps J.G.G. was Miss Gardner, traveling with her father. If she had instead been a Mrs. Gardner she makes no reference to her husband in her cards; only “Father” in the one card to Mr. Gardner. Further suggesting, subjectively, that J.G.G. was a woman is the writer’s voice of more tenderly reflective phrases, *viz.*, “All serene” and “Moonlight nights and such air and good times.” If my supposition is proven incorrect, that notice will be welcome as one more, small advance in the history of Grand Canyon visitation. As John Wesley Powell concluded his thoughts on watching the Colorado River enter into the unknown, untraveled Upper Granite Gorge of Grand Canyon, “Ah, well! we may conjecture many things.”

The scrapbook fragment includes a number of items other than the Grand Canyon photographs: two photos apparently taken at Petrified Forest; a series of unmailed Detroit Photographic Co. postcards of the Grand Canyon, from copyrighted issues of 1900, 1901 and 1902; clippings of photos from unidentified magazines; and a Santa Fe Railway timetable. One magazine clipping in the scrapbook recounted a writer’s visit to the canyon and expressions of awe. I identified it as an item by Benjamin Brooks in the October 1903 issue of *Scribner’s Magazine*, thus obviously it was read after the canyon trip by J.G.G. and party.

---

8 See the page from Powell’s 1875 record, shown in facsimile in the frontispiece to Part 2 of the bibliography.

9 I am compelled to include a note that testifies to one of the great boons the modern Internet is to bibliographers and other researchers. The selection that was clipped from an unidentified magazine included a peculiar phrase, which I thought could be identified. The author was commenting on his recollections of the Grand Canyon, in his mind’s eye. He said he saw it still, “and mayhap always will in the future.” I typed this phrase into the search screen on GoogleBooks online. A single return pointed to the article by Benjamin Brooks, “The Southwest From a Locomotive”, in *Scribner’s Magazine* for October 1903, page 437 [Item no. 2.8291 herein]; a so-called “serendigital” discovery (or in this case, recovery). I cannot imagine how this could have been identified in the days before digital resources, except through a resounding, personally-acquired command of the literature and its resources and perhaps a very keen eye for typography. Of course, the GoogleBooks resource does not include every item ever published (hardly!!); and this item might not have been digitized in the first place thus never found online. Should one wonder whether the occurrence is coincidental, by comparing the clipping against the typography and lines in the original publication one finds they are exact, positively identifying the source.
In the *Scribner’s* clipping, the train’s “wooden-legged engineer”\(^\text{10}\) turned to traveler Brooks:

“Ever been out to the Cañon before?” asked he.

No. I never had. I had seen Switzerland, and the Canadian Rockies, which are better, and the Yosemite, which is better yet, but never the Grand Cañon.

“Well, sir, when you get out there this afternoon, you’ll see the — the damnedest sight you ever saw in your life!”

The scrapbooker agreed, cutting the passage from the magazine. One wonders if they thought the comment pertained to their enthusiastic traveling group, too!

If J.G.G.’s scrapbook seems to be not quite the kind of preview one expects for a foreword, bear in mind that it introduces a digital document, and that hers is a personal record of family and friends. The foreword resembles—in fact it represents—any number of personal accounts that are recorded in *THE GRAND CANON*, each an evidentiary record of pastime and interest. These items in J.G.G.’s scrapbook are work that precedes my own, too. I have gathered from them some ideas of a traveler’s activities more than a century ago, one of the very purposes of a list of previously published works. I applied that information to fashion a brief story not previously told. Perhaps I unwittingly make part of it a fictionalized documentary—precisely the kind of service offered by the citations contained in this bibliography.

And then there is also J.G.G.’s photograph of legendary John Hance, the man who dug out the Grand Canyon—a hitherto unknown portrait, a treasure, added here to the ever-growing historical portrait of the Colorado River and its Grand Canyon.

---

10 I had hoped to learn something of a “wooden-legged engineer” on the Santa Fe Railway, but learned instead that a wooden leg was not unique in this line of work. But we cannot know whether his injury was due to a railway mishap, other accident, medical procedure, or war wound.
IT IS TIME, I think, to pause for a moment. The drumming of citations in the *Bibliography of the Grand Canyon and Lower Colorado River*, begun in 1974 and having been continually in print or online since 1981, is monotonous; if not for the compiler, certainly for its regular users. It is time to net some thoughts that have swirled around this work for nearly four decades now, and to make the whole a little more personable.

This product has grown in leaps, from its first compilations on index cards in the 1970s, to the Grand Canyon Natural History Association’s printed volumes in the 1980s and ’90s, archivally shored up by microfiche and digital-disk versions, finally in 2000 to a wholly online presence in the form of a digitally queryable and continuously updated database hosted by the Grand Canyon Association (accessible through its own domain name, [WWW.GRANDCANYONBIBLIO.ORG](http://WWW.GRANDCANYONBIBLIO.ORG)). It has changed from a cursory list of publications to an international record of literary, utilitarian, scientific and documentary productions about the Grand Canyon and lower Colorado River region—and then some, as the user shall see. And by coincidence, this new production is distributed on the centennial of Arizona statehood and the centennial of the finish of the Colorado River filming expedition by the Kolb Brothers, Ellsworth and Emery, one of the more notable and productive river trips on the unreigned Colorado.

The work of bibliographies is shaded by more constructive and entertaining works. In this publishers’ shadowland this bibliography emerged from a single publication in pragmatically economical, small type, to become a searchable, digital work of international scope. It is now both a database (online) and a monograph (this digital master, *THE GRAND CANON*). The functions are twofold: one retrieves selections, the other presents an unobscured whole. The Grand Canyon–lower Colorado River
bibliography is unique among national park units and areas administered under other public-lands agencies, as well as among national park partners (as explained in the separate Survey herein). The lists of published items on thousands of pages herein serves users as the means by which to bring attention to and to keep returning to those works. The citations will be called upon for new tasks; they will also re-find remembered sources, and, continuing the cycle, they will serve up new sources to questions asked anew or never asked before.

When in 1980 the Grand Canyon Natural History Association (in 1996 it became the Grand Canyon Association) expressed interest in publishing this bibliography, the only one then available specifically for the Grand Canyon was a mimeographed compilation made for Grand Canyon National Park nearly a half century earlier. As part of the Association’s new Monographs series, the new, printed bibliography was made available to the academic community foremost; and the Association took the financial risks in revising it a couple of times during the next decade and a half, with substantial format changes. Together we had what we believed to be foresight in distributing the second edition and its supplement in three different formats: a loose-leaf printed volume¹¹ (to accommodate updates), microfiche and plain-text digital files on diskettes¹² (“floppies” as they were known). These were judicious acknowledgments to the varied needs of libraries particularly, following what then was a euphoria for space-saving microforms and wary hope for the utility of portable, searchable digital media. We had not expected the medium of microforms to become so soon a tolerated necessity that would fall to digitization anyway, nor that while the ASCII format of the diskettes may have been attractive to new, digitally literate librarians it was not embraced by actual users.¹³

So, in 2000 a greatly re-revised, fully searchable, entirely digital bibliography was launched into the electric web of the Internet, hosted on the Grand Canyon Association’s website. We did not realize at that time how different this would be. Its immediate usefulness contributed to losing sight of the whole work—interacting with a database format does not allow the user to see it from the perspective of a physically complete, tactilely informative volume. That lost sight is restored in this PDF (Portable Document Format) version, without displacing or adversely competing with the online edition. Its present size and ambition, relabeled as a GRAND CANON, documents as closely as possible the complete publication history of the Grand Canyon and lower Colorado River region. Only the sheer size of this document, in pages, precludes an economical reproduction in printed format; and the use of color throughout will

¹¹ See example illustrated in Appendix B to Part 1 of the bibliography.
¹² See examples illustrated in Appendix B to Part 1 of the bibliography.
¹³ See example illustrated in the frontispiece to Part 29 of the bibliography.
further discourage the economy of hardcopy. But those who wish to have a printed version are at liberty to produce a reference copy although it will lose the effectiveness of the embedded hyperlinks.

The present work—THE GRAND CANON—is the renamed\(^{14}\) and formulaic foundation for its more noticeable online presence; both are direct descendants of those long-gone index cards. The monographic presentation here is the first new view of the bibliography in nearly two decades; the last printed version was a supplement issued in 1993. In 2000 it had morphed from the seen–whole world of physical volumes to small and selectively chosen satellites ejected from digital inquiries—the view of the whole was lost. Where the online bibliography lets users handily and expeditiously find and extract selected sets of citations, they no longer see the depth and potential of the work; they cannot see what it may hold, unexpectedly, for current work or that it can reveal ideas for future work. So it is time to reintroduce these aspects to new generations of researchers and others who find this work useful.

The bibliography has much more to offer users than a droning recitation of previously published works. It is a treasure map to the productions of individuals, organizations, and government agencies. There are histories to be found here; analyses and surveys of past trends in perceptions, understandings, and thoughts. There are future works that may be sculpted from it; more ambitious, more broadly useful compendia like annotated sets of citations chosen for any number of reasons, or critical reviews of historical, literary, and other themes that are represented in the titles and venues displayed in the bibliography. Here are stored empty vessels, too, suggesting what is not present—work that needs to be done. There are unexpected surprises that cannot be anticipated by routinely crafted key-word searches; surprises that can be recognized only by those who are searching, for every project will have its separate objectives, and every researcher will have their specific focus and method of research. Only the user can recognize what is of most significance to the work at hand. The expedience of digital queries serves good purposes; the patience of careful reading inspires anticipation and discovery.

THE GRAND CANON is in digital format, thus it is conveniently searchable and further enhanced with the complementary use of hyperlinks for use in a web browser; but it is like a printed work, too, a traditional monograph. The monographic design is partly for the sake of familiarity and utility, and as a hedge against the potential disappearance from the web of the searchable online database. Most significantly,

\(^{14}\) Regarding the usage of the word “canon”, see elsewhere herein, Why “Grand Canon”?

though, it restores the monographic presentation that went out of print with the introduction of the Internet Edition online.

Despite resounding huzzas for the broadly digitized and “connected” world we live in now, and the tremendous and invaluable resources available electronically, we researchers still very much work in a paper-bound society. As an archivist I work in an institution founded in the 18th century that is nonetheless, to perpetuate an already-worn phrase, on the “leading edge” in the digitization of some of its collections; but by and large the vast majority of our holdings are still on paper and will remain so for a long time to come. In that regard we are hardly unique. Researchers arrive from around the world to spend weeks poring over our holdings; they work in ways that would be impossible were these resources to be all available online (less a likelihood for the foreseeable future considering the size of the collections comprises millions of items). However, our online catalogues, and the way the researchers request materials to examine, are all digital; no paper call slips, and no more scribbly requests and made-up, mixed-up, and whimsically (lazily) abbreviated “time-saving” citations to confound the library’s staff. But what they receive in turn is—paper. Even those things that we do have in digital format are never the definitive substitutes; sometimes paper originals must be examined. And from this perspective, **THE GRAND CANON** in its monographic format holds to the traditions of our still paper-bound world of reference and research, where the most will be found, while offering in its online database the means to quickly focus on selected sets of information. Like the archives in which I work, the paper and digital worlds work beside each other.

With the digital version of **THE GRAND CANON** one may print or extract portions of the monograph for specific needs. The PDF makes it easy to acquire or to transfer to other places. Unlike its searchable database online, the digital format’s monographic display allows for more distinctive and pleasing typography; an ease on the eyes and on the mind searching for specifics. There is no concern about the financial pressures that attend to numbers of pages, printing costs, and the expenses of maintaining inventory.

The print edition of this work evolved to include numerous introductory essays in the second edition in 1990, a useful design that helped earn it a National Park Service cooperating-associations award for publication; then it expeditiously devolved to more utilitarian status in 2000 on its migration to the web environment, for which for the time being there are no competitions for the products offered there. Online, text was removed and tightened up except mostly for mundane informational parts about the format of the bibliography; that which survived was presented in aesthetically clumsy HTML mark-up, more function than form. The main focus was then, and still is, strictly utilitarian: the searchable database. It is continuously updated, and, as explained
elsewhere herein, it is unique; nothing comparable to it has been found during the years since going online, although its users are not aware of that.

Ten years onward, in 2010 I began to see that my own “private” bibliography—this document, an expanding continuation of the print volumes—was a format that still would be useful to researchers. Furthermore, the number of accessible large documents on the web had increased tremendously in that time, which reflects the increases in resources and communication speeds that are available to almost everyone. Documents such as this one are often available as PDF (Personal Document Format) files that may be downloaded at will regardless of size. Even though PDF is a proprietary software format of Adobe Systems, Inc., it is so widely, conveniently, and freely used (even by the likes of the Library of Congress for many of its digitized holdings) that it has become a de facto part of home and business document digitization. Almost everyone who has a computer can view PDFs; those who cannot may obtain the PDF viewer at no charge.

That is when I thought of making the Grand Canyon–lower Colorado River bibliography available once again in its browsable entirety; except this time in a searchable digital format, which virtually anyone can use. True, each PDF edition of THE GRAND CANON will fall behind in currentness; only the continuously updated online database will keep pace. But the overall intention of re-presenting the monographic format is to place its browsable, perceptible whole in the hands of users who need precisely this kind of resource. It neither competes against nor detracts from the online database—in fact they complement each other. The database allows users to retrieve sorted sets of citations regardless of where they are positioned in the bibliography. The monographic work allows users to search serially for specific things, and they may peruse and retrieve contiguous selections rather than only those selections that meet certain search criteria. And, perhaps most importantly, its content can be browsed: the monographic format includes much more to READ rather than to look up.

REVAMPING AND INCREASING the informational chapters and essays, I hope I have made the work also an interestingly “readable” product. I had written a number of things intended for the 2000 launch of the bibliography website, but which over concerns of webpage size were omitted. I continued to add to them in this “personal” copy. So, all the while, THE GRAND CANON continued to evolve, becoming the product that is presented here.

The Navigation Page serves as a table of contents for the entire document. I have followed further on the utility of this digital medium to allow the user to migrate to and within every part of the document by using hyperlinks, but even if a printed copy or a non-functioning digital copy is used the use of hyperlinks is not mandatory; it is still a comprehensive monograph.
Some lengthy informational chapters are included that explain what THE GRAND CANON is about and how it is constructed; these may be expected by many users, those who are familiar with the work as well as those who are new to it. I also have included a Preamble that is a short illustrated excursion through some of the evolving perceptions of the Grand Canyon, from its earliest European visitations to the early part of the 20th century. Another essay is included on the worth of the traditional bibliography in the digital age.

A survey places THE GRAND CANON in position with the more modest and selective bibliographies that preceded it over a century. It also compares it to other bibliographical offerings within the U.S. National Park Service and cooperating associations that are affiliated with specific National Park Service units. The survey shows that in scope and content there is nothing else like the Grand Canyon–lower Colorado River bibliography.

I account for every title of periodical and serial that is cited in the bibliography, an astonishingly large list of more than 5,000 now, which I compiled as a matter of recordkeeping. If nothing else, this list is a measure of the incredibly wide interest in the Grand Canyon held not just by authors, but by editors and publishers.

Also included are some Appendices that I had hoped to conjoin to the website database in 2000; these itemize the numerous states of several publications, including three that saw many revisions or editions over decades during the 20th century. Few users care about such “points”, as such minutiae are called in the bibliographers’ domain, but they document otherwise inaccessible information about these publications that on occasion are useful after all.

Purely as an indulgence, I have replicated herein some original photographs, postcards, and clippings from a scrapbook that someone had assembled after a 1903 visit to the Grand Canyon. I think it was a woman—one of the women in the photographs—who accompanied a party presumably of family and friends to John Hance’s hotel, where they traveled the Hance Trail to the Colorado River. To commemorate her work, I have chosen this anonymous scrapbooker to serve as the author—in pictures and scraps—of a Foreword to THE GRAND CANON. These few leaves admirably highlight the perceptions and evocations that thousands of others have offered about the Grand Canyon and the Colorado River, in person and in published forms.

Most differently, THE GRAND CANON contains a special Nomenclatural Appendix that itemizes the astonishing breadth and depth of how the term “Grand Canyon” has figured into other geographical and literary uses. These, just as like the bibliography itself, have become compilations which, had I understood in advance just how large
they would be and how much time would go toward assembling them, I wonder whether I would have even begun the project. Nonetheless, these lists are presented here for the first time anywhere; and I hope they are for others as entertainingly amazing as they are for me, and useful for those who seek to understand more about the tremendous cultural influences the Grand Canyon has had beyond itself, in writings and in features seen on every continent and in outer space.

A “BIBLIOGRAPHY” OR NOT?

In the title, _The Grand Canon_, I drift away from directly using the word “bibliography” because it may hold for some of its audience undeserved connotations of irrelevance and boredom. True, bibliographies are overlooked; they more and more are considered to be passé, an antique kind of research tool at odds with the techniques of modern clienteles and resources. Perhaps the word “bibliography” is dull, one or two syllables too long as well. And beginning a title that used to ramble for twenty syllables—A Bibliography of the Grand Canyon and Lower Colorado River—it does not lend itself well to informative repetition. Yet many people have, like me, been so strongly indoctrinated into the “bibliography culture” of 19th- and 20th-century scholarship, that they will not quickly identify the nature of this work without the word “bibliography” somewhere, nor likewise busy library catalogers may not grasp the contextual nature of this work without being shown this antique word; so it is informatively kept in a summary statement on the publication-data page.

Even though the essential service bibliographies provide is often sought in some quarters of academia and among some book-collectors and sellers, these users seek existing aids; rarely do they strive to create such aids even when the niche is vacant. Publishers today do well to distance themselves from these economically poor title choices, too, at least in the inkprint market; and hurrah of the short-lived microforms market was quickly deadened by the advances in digital productions. Exceptions are limited to works that are significant scholarly contributions, often financially underwritten or self-published. The general response to resource needs today has been to rely upon easily-found, web-posted, homespun, perhaps poorly composed bibliographical lists, sometimes with questionable credentials and comprehensiveness, and large, searchable databases that may not always provide expected results due to limitations either of content or digital capabilities.

15 Regarding the usage of the word “canon”, see elsewhere herein, _Why “Grand Canon”?_.

15 Regarding the usage of the word “canon”, see elsewhere herein, _Why “Grand Canon”?_.

---

---
THE CONTENT OF *THE GRAND CANON* passes beyond the etymology that adequately defines a traditional bibliography of printed works. Included herein are audio and audio-visual productions, works prepared for those who have visual handicaps, and computer software; some items are wordless or un-printed.

Dictionaries define “bibliography” broadly; I prefer to think they define the term poorly. It is applied less convincingly to non-printed media, such as film or digital productions. A “bibliography” has always implied “books” and, by extension, magazines. Accommodating other media, when they came into existence, was accretionary; a reactive process in the absence of creative neology.

Principal definitions of “bibliography” embrace the tradition of printed materials and, less frequently only because of the far fewer number of practitioners, the specialized study of the physical structures or physiognomy of printed and bound products; after that are sundry definitions that group non-printed media. I think that neologists should stand up to the task to provide a more suitable term to embrace *published* material, as they have already for embracing specialized media. It is, however, a tall order.

For example, “filmography” obviously pertains to motion pictures. “Discography” pertains to audio recordings, usually musical; the term is seen in some titles or descriptions awkwardly as “biblio-discography”. When musical works were fashioned on plastic “phonodiscs” (to use a librarian’s term), also known to several generations as “records”, it was sensible to say that their bibliographies were “discographies”. Then, fortunately for the term “discography”, the next generations of musical works were fashioned on CDs and DVDs, and a few other short-lived formats, that were still round platters—“disks” or “discs”. The downloadable music of the present-day web takes us into new territory, though. It is beyond being just a digital format, it is intangible and ephemeral; we have no consensual –ographical term for that. Nor can we pass around these ephemeral digits, as we once did the records and CDs, without trampling on intellectual-property rights protected under Copyright Law.

For accountings of resources held in the Internet (web) environment, the newer term “webography” corrals URLs, website addresses that may be gone even before the compilation is made available. For what such an ephemeral work may be worth, it is a name. Interestingly, it is sometimes referred to as a “webliography”, a notable, even frantic, etymological reattachment to “bibliography”.
But for a “bibliography” of published works, regardless of the medium, which can also embrace the digital ether, there is as yet no enveloping term; at least none that is comfortable enough to the eye and ear to enter into wide service.

For this expansive compendium of published Grand Canyon–Colorado River material I choose the word “canon”. When the intention is to map the universe of material pertaining to a subject, within specific guidelines, it deviates from the two-dimensional look of a “bibliography”. A “canon” does not hold un-printed media in bondage to the “biblio-” prefix; it allows for technological publications in media as yet unknown. It lists all kinds of items that had been produced in multiple, identical copies, which are “publications”. And as with its traditional definition, a canon will be held to precise expectations of comprehensiveness, authority, reliability and accountability.

Etymology notwithstanding, I hope to no longer stigmatize this work from first glance at a perceptually boring title-word, “bibliography”. It has proudly, academically carried that title-word through the previous published editions since 1981 and into the digital age online in 2000; but it is time to grow out of it. Scholars, as well as individuals who professionally and avocationally orbit the Grand Canyon and the Colorado River, find the word attractive, of course, but now I seek to also engage administrators, technical and general users, and all who may be in non-academic

16 By “published” is meant productions reproduced in multiple copies either for wide or limited distribution, regardless of their intended audiences or cost to recipients. These include: inkprint (books, pamphlets, articles in journals and magazines, sheet music, maps, and so on); tactile products (Braille or Moon type, for example [see also frontispiece to Part 5 of this bibliography]); audio recordings (including analog phonodiscs [“records”] and audio tapes [like cassettes]); analog films (with or without sound, in various formats); transparency sets (“slides” and “filmstrips”); digital audiovisual tapes (like VCR-format videos); digital disks (both audio and audiovisual, like CDs and DVDs); and computer software for public distribution and reuse (usually distributed on “floppies” (flexible disks, although later, smaller formats are enclosed in rigid housings), “CDs” (Compact Disks, more fully known as “CD-ROMs”, Compact Disk–Read-Only-Memory), and “DVDs” (originally Digital Video Disks but later, to also include data disks, Digital Versatile Disks). Reproduction in “multiple copies” further implies that access will be possible to any of numerous, identical copies in various locations, and that copies may be transferred from place to place without loss or be reproduced again by photocopy or other means. Although some rare or scarce items—a few may now be unique due to the vagaries of misfortune—will be difficult to locate or to gain access to, such concerns are beyond the scope of the present work, which serves only to audit material that has been produced, regardless of original scarcity, subsequent survival, or access restrictions imposed by the repositories that hold them. Productions posted to or available from Internet websites, even if deemed to be “published”, are purposely excluded from this compendium because they are ephemeral—there is no assurance that access to such works will always be possible; and even hyperlinks can be rendered useless when the target locations are changed in any way, even though the item may still be present elsewhere. Once these failings can be conveniently and reliably remedied, a webography for the Grand Canyon–Colorado River can be derived from the electric universe of “live” and archived websites. If for some reason none survive, it is a moot point and THE GRAND CANON will continue to serve as it always has.
occupations and avocations. “The Grand Canon” raises curiosity; the subtitle term, “published items”, calls up more than books and articles.

In the text herein I must, for good reason, bow to conformity and continue to use the word “bibliography”. Versus its use in a title, “bibliography” is a term less objectionable within the text because it is still the familiar conversational term. Cumbersome, sometimes ambiguous, phrases could be created by calling this work a “publications record” (or something like it) each time the word “bibliography” is used in a sentence, but thought-exercises using them prove them unsatisfactory. I had entertained calling this a “catalogue”, too, based on the inclusion of unique item numbers with each citation, but discarded it as being lackluster and dismissing as “bibliography”—too categorical, frankly. I also avoid repeating in every instance the phrase “this bibliography”, substituting “THE GRAND CANON”, which vitalizes the comment rather than veiling it with an adjective. ✧✧✧

So this is a bibliography—in the traditional sense—but it is an index, too, guiding users to numerous works that include references to the Grand Canyon and Colorado River, which otherwise may have escaped notice in a bibliography of “complete” works about these subjects. And it is a guide with which one may discern, rather unbibliographylike, what is absent in the literature and among published products, and what still may need to be done.

For the time being the phrases “THE GRAND CANON” and “published items” will engage audiences through the title. Once into the depths of the work, where using the word “bibliography” is still preferred, I hope readers by that point view the word not as one promising a gray recitation but more with anticipation for the delivery of useful and interesting goods and services. In any case, within its guidelines this work will continue apace, recording the presence of as many as possible publications produced in multiple, identical copies, that are about or take note of the Grand Canyon and the lower Colorado River. And in that fashion it is a grand canon of diverse human perspectives and activities in a fascinating region of Earth.

There is more for the reader and researcher, too—again unbibliographylike—things that I hope will amaze and inspire more investigations of the Grand Canyon, the Colorado River, and the wide-ranging influences these places have had in the thoughts and imaginations of others. THE GRAND CANON is a place to find and finish things—and to begin things. ✧✧

Professional affiliations are listed from the time of contributors’ participation in this ongoing bibliography.  
As of 2012 Cassidy, and Quartaroli (now retired), continue as principal bibliographical contributors.

The Acknowledgments to previous editions included numerous occasional bibliographical contributors not listed here. Other individuals contributed introductory essays to the second edition in 1990.
WHEREAS John Wesley Powell captured the Colorado River’s canyons for the world to imagine, it was C. E. Dutton who first fashioned their history. His monumental *Tertiary History of the Grand Cañon District*, with its folio *Atlas* and illustrations by eminent artists, sculpted the “great stairway”* of strata that spans the plateaus of Utah and Arizona, the Grand Canyon ultimately exposing the cellar of the Grand Canyon’s inner gorge. There he read the dynamic, grand history of the Tertiary Period when the landscape was formed. But its age in years was then unknown, as geological ages were worldwide, before the discovery of radioactivity and radiometric dating of rocks. His final words in the *Tertiary History*:

> No doubt the question will often be asked, how long has been the time occupied in the excavation of the Grand Cañon? Unfortunately there is no mystery more inscrutable than the duration of geological time. On this point geologists have obtained no satisfactory results in any part of the world. Whatever periods may have been assigned to the antiquity of past events have been assigned provisionally only, and the inferences are almost purely hypothetical. In the Plateau Country Nature has, in some respects, been more communicative than in other regions, and has answered many questions far more fully and graciously. But here, as elsewhere, whenever we interrogate her about time other than relative, her lips are sternly closed, and her face becomes as the face of the Sphinx.†

The answer to the question is, perplexingly, still a matter of conjecture.

---

*Clarence E. Dutton, *Tertiary History of the Grand Cañon District* (U.S. Geological Survey, Monograph 2, 1882), pp. vii, 2, 43, 52. It was Dutton who devised the metaphorical “great stairway” of plateaus that fills much of the Colorado Plateau. The term, however, seems to have since been corrupted, often repeated with loss of attribution as the “grand staircase”.

†Dutton, p. 260.
In earlier offerings of this bibliography I acknowledged legions of helpful contributors, librarians, and others who aided and inspired. Even though some of those comments are now more than 30 years old,17 my thanks repeat. The cumulative contributions by these people are not subtracted from nor diminished by the present work.

The Grand Canyon Association must be specially recognized for its commitment to the bibliographical project since 1980. The longevity and the ever-increasing utilitarian worth of this bibliography in the public venue is due wholly to the Association, which made it widely available first in 1981, and in 2000 exported it to the worldwide realm of the Internet. Web-crawling computer programs regularly contribute the content of the Internet Edition of the bibliography to search engines, greatly amplifying the reach of this work. The bibliography contributes to the Association’s mission to “benefit Grand Canyon National Park” and to provide “premier educational opportunities about the natural and cultural history of the region”. With this work the Association enriches not only the national park but it adds to the resources available to citizens, organizations, and federal and other agencies beyond the national park, within the entire lower Colorado River region in the United States and in Mexico both. And indeed, the Association has made this work available not only to park visitors and administrators but to a worldwide constituency of scholars and Grand Canyon–Colorado River avocationists. A color palate of users has been reached,

17 Acknowledgments for the 1981 edition are in the Preface to Grand Canyon Natural History Association Monograph 2, p. 3. Acknowledgments for the 1990 edition are in Monograph 8, pp. xi-xii; and for the 1993 “Supplement 1” in the Preface, page x-1. Original acknowledgments to the 2000 Internet Edition are on webpage http://www.grandcanyonbiblio.org/copyright.htm; also there will be found corrected postings of all the prefaces and acknowledgments to the print editions as well as forewords and special introductions.
from notable researchers to youthful generations who have used this work for projects in schools, clubs, and social organizations.

Since 1974, even with the valuable contributions by many others, I have nonetheless flown solo, the content of the bibliography being in the end my responsibility and a voluntary effort. This has had the benefit of there being a single organizer for the bibliography, without the “meddling” of co-editors or following worn-in trackways of previous ones. However, the numerous revisions, and my sinuous learning curve over decades (both for the art of bibliography and the history of the region covered here) reveal themselves in rough spots and inconsistencies in the crafting and organization of citations, despite ongoing editing. My thoughtful and diligent contributors, and the Grand Canyon Association, are not responsible for my indecisions, misdecisions, and occasional bouts of inattention.

I must acknowledge now my debt to several people whom I thank for being in some fashion responsible for more keenly focusing my interests in the bibliography, history, and science of the Grand Canyon and the Colorado River; and indeed also to my interest in the art of bibliography itself. Without these people, this work might have desiccated for lack of attention.

Within the extended Grand Canyon community, I first single out Louise Hinchliffe, now-retired librarian for Grand Canyon National Park, a true librarian as I came to know them even as a young boy. She dutifully answered every pestering question I had during the early years of this bibliography, then took the initiative to give me even more than I had asked for. The late Dave Hellyer, original proprietor of Five Quail Books, introduced me to new passages in the bibliographical journey through the Southwest, through his catalogues as well as in interesting conversations on the phone and by email. Dan Cassidy followed suit, a Phoenix newspaper printer (now retired to Prescott) who purchased the Five Quail stock and name from Dave. With his wife, Diane, they continue to feed the insatiable bibliographical appetites of a small and dedicated market. Jane Davidson, an art historian with the Department of Art in the University of Nevada at Reno, has for years offered interesting discussions in correspondence and in person about art generally, and points of artistry amongst the special school of Grand Canyon portraitists. And, following the public speaker’s tradition of reserving more influential people for last, I thank Richard Quartaroli. “Q” in correspondence and occasional by-line, Richard is a Colorado River historian and now-retired Northern Arizona University special-collections librarian who is, unstereotypically, also a Colorado River boatman. Ours is an acquaintanceship on land and river now in its third decade. He is the one contributor who steadfastly dribbles historical trivia on me and stuffs my mailboxes (postal and electronic) with
citations and packages of printed things, which wend their ways into this bibliography and my research collections. I thank him also for contributing his compilation, “Variants of E. L. Kolb’s Through the Grand Canyon From Wyoming to Mexico”, which he had started while studying for a degree in library science and on which he continues to work as part of larger projects on the Colorado River and the Kolb brothers.

In addition, I must after all these years add thanks to the late Horace G. Richards, long the curator of the former Department of Geology and Paleontology in the Academy of Natural Sciences of Philadelphia\(^{18}\), where I was then (in the 1970s) an undergraduate-student volunteer. To him I owe most thanks for having unwittingly inspired a new bibliographer. Dr. Richards was the principal compiler of several volumes of an annotated bibliography on the geology of ancient shorelines of the Quaternary Period worldwide.\(^{19}\) It was through these volumes that I began to take interest in the concept, scope, and purpose of bibliographies; a reawakening long after my first, disinterested but not repelled introduction to bibliographies in the sixth grade (with a nod of respect to my elementary school librarian, Mrs. Holman). Dr. Richards’ annotated bibliographies opened my eyes to the idea that bibliographies can be much more than lists. His volumes provided seminal inspiration and helped attune my bibliographical energies in many fields, and to all kinds of bibliographies. Later, direct encouragement from the late Dr. Edwin D. McKee of the U.S. Geological Survey, legendary Grand Canyon sedimentary and stratigraphic geologist and Grand Canyon naturalist, helped inspire me to compile more than one volume of an annotated bibliography of Grand Canyon geology and similar works of indexing\(^{20}\), which were published by the Geological Society of America albeit on microfiche during the short-lived era of microforms enthusiasm before digitization. I must mention also Dr. William B. Gallagher, a long-time acquaintance, also a student mentored by Dr.

\(^{18}\) The Academy of Natural Sciences of Philadelphia, founded in 1812, is the oldest continuously-operating natural sciences research institution in America. It was in 2011 formally affiliated with Philadelphia’s Drexel University, becoming The Academy of Natural Sciences of Drexel University, an independent not-for-profit organization administered by the university. Corporately, however, it remains the Academy of Natural Sciences of Philadelphia.

Richards, with whom I had worked in study collections and as a geologist and paleontologist in the sands and muck of the east coast Coastal Plain. Bill’s enthusiastic, broad-scoped knowledge of both geology and ecology produced energetic discussions and dialogs in the office, home, field and tavern, which opened ways of seeing the world and literature alike that I had not before seen.

Herb and Janice Harvis, friends of a colleague of mine in the Academy during the years when I worked there on payroll (1980s–2000s), through a private fund administered by them underwrote my travel expenses to attend a 1994 Geological Society of America Penrose Conference in San Diego—“From the Inside and the Outside: Interdisciplinary Perspectives on the History of the Earth Sciences”. It was the first such convocation of geologists who study the history of their science and professional historians who study the geological sciences. One especially significant outlook achieved from the work of this conference was that one may unapologetically embrace both historical and scientific focuses and language in one’s work and writing. Ever since, I repeatedly have enthusiastically climbed to this breezy viewpoint, hopefully to good advantage.

I am indebted to dozens more canyon–river professionals and infatuationists with whom I have crossed paths in the field and in correspondence. A rich orchestral score of discussion, trivia, and comments in passing, beachside, trailside and tableside, has fashioned my understanding of the histories, cultures, and sciences of this region—as of course have the thousands of published items cited herein, and thousands more things scattered across the ephemeral web of the Internet that do not appear here—my own Grand Canyon Suite if you will.

Comments and discussions with my colleagues in libraries, archives, and research collections during the past decades, as well as comments received from users of this bibliography, have provided a constant source of refreshed perspectives and constructive criticism.

Everyone has helped to make this broad and deep canon especially grand—with my continuing thanks.

---

21 Ferde Grofé composed five captivating orchestral movements in Grand Canyon Suite (1929–1931), first performed in Chicago on 22 November 1931. The movements are “Sunrise”, “Painted Desert”, “On the Trail”, “Sunset” and “Cloudburst”. See “Grofé” in Parts 2 and 27 herein; and see also numerous citations pertaining to Grofé by searching on “Grofé” throughout the bibliography.
TOO OFTEN, it seems, J. S. Newberry is overshadowed in the early Grand Canyon literature by the tremendous accomplishments of John Wesley Powell and Clarence Edward Dutton. True, these other men’s work took great strides toward understanding the geology and physical geography of the Grand Canyon region; indeed, the whole Colorado Plateau. Yet it was Newberry, in 1858, who first recognized that the canyon landscapes were the result principally of running, if ephemeral, water. It was a leap away from catastrophic landscape interpretations—undefined “upheavals” usually, or great “renting” of the land—that powered a geological genre whose practitioners were at a loss to comprehend great physical changes during a timeframe that was on the order of thousands of years, not millions. Newberry had accompanied the Ives Expedition on the Colorado River as a physician, but his Geological Report laid the way for Powell, Dutton, and generations of geologists and geographers to come.

"Camp Yuma. Big Colorado below the mouth of the Gila." Lithograph by Ackerman, New York.

BEGINNS HERE

THE EXPLORER

[AT ABOUT THE SAME SCALE AS THE FOREGROUND OF LITHOGRAPH ABOVE]
When Lt. Joseph C. Ives, U.S. Army Corps of Topographical Engineers, was placed in command of an exploring expedition to determine the limits of navigation on the Colorado River, the first order of business was, obviously, to obtain a boat. He outlined the process in his official report:  

To ascertain how far the river was navigable for steamboats being the point of primary importance, it was necessary first to make provision for this portion of the work. The company employed in carrying freight from the head of the Gulf [of California] to Fort Yuma were unable to spare a boat for the use of the expedition, excepting for a compensation beyond the limits of the appropriation. A boat of suitable construction had, therefore, to be built on the Atlantic coast and transported to San Francisco, and thence to the mouth of the river. In order that the survey should be made at the worst and lowest stage of the water, I had been directed to commence operations at the mouth of the Colorado on the 1st of December [1857]. This left little time for preparation, considering that it was necessary to build a steamer and carry the parts to so great a distance.

In the latter part of June I ordered of Reaney, Neafie & Co., of Philadelphia, an iron steamer, fifty feet long, to be built in sections, and the parts to be so arranged that they could be transported by railroad, as the shortness of time required that it should be sent to California, via the Isthmus of Panama. About the middle of August the boat was finished, tried upon the Delaware, and found satisfactory, subject to a few alterations only. It was then taken apart, sent to New York, and shipped on board of the California steamer which sailed on the 20th of August for Aspinwall [Colón]. Mr. A. J. Carroll, of Philadelphia, who had engaged to accompany the expedition as steamboat engineer, went out in charge of the boat.

The lithograph on the preceding page depicts Reaney, Neafie & Co. at the time when Ives commissioned the Explorer. The firm was situated at “the foot of Palmer Street” in the Kensington section of Philadelphia. Today the property is occupied by a municipal electrical powerplant, north of and immediately adjacent to the Penn Treaty Park on the Delaware shore.

As indicated in the legend to the lithograph, an advertisement, the firm was especially suited for the job of building the Explorer: “Engineers Machinists Boiler Makers Black Smiths and Founders; Manufacturers of high & low pressure Marine & Stationery [sic] Engines, Boilers of all descriptions, Propellers, iron Boats, Water Tanks, heavy & light Forgings, Iron & Brass Castings.” And especially notable in light of Lt. Ives’ hasty needs, “Having Extensive Wharf & Dockroom, are always prepared to build & repair Engines and Steamers at the shortest notice.”

---

The following advertising sketch accompanied the illustration:²³

The firm of Reaney, Neafie & Co., is composed of Thomas Reaney, Jacob G. Neafie, and John P. Levey. The Messrs. Reaney & Neafie have each had a long and practical experience in machine shops—the latter having served his apprenticeship with Mr. Holloway, the first marine engine builder in Philadelphia; while Captain Levey, the financial partner, is a practical seaman and shipwright, possessing a familiar knowledge of the rules, rigging, and engines of steamers. The result of this union, is that the firm are prepared to build any description of steam vessel outright, and owners have but one contact to make, and that with a very responsible firm. In the construction of iron boats of all classes, both side wheels and propellers, this firm do a large business. They also make all kinds of engines and boilers, high and low pressure, heavy and light forgings, and iron and brass castings of all sizes and patterns—the stock of patterns is very large.

Their establishment, which commenced operation in 1845, and since that time has gone on increasing rapidly, and is now one of the largest in the country, is situated on the river Delaware, contiguous to the spot of ground where William Penn made his famous treaty with the Indians. The works throughout, consist of several docks and wharves along four hundred feet of river front of deep water; a marine railway for hauling out vessels for repairs; a boat yard occupied for building iron steamers; a large and commodious boiler shop; a substantial and spacious brick smith shop, containing two steam hammers, besides the various smaller forges; a large and well ventilated three story brick machine shop, abundantly supplied with tools for doing all kinds of work, from the smallest fire engines up to the heaviest marine or stationary engines.

To date, no research has been followed to track down whether records still exist for the Army’s order for the Explorer. And as is well noted in published records, the Explorer was sold after the expedition, seeing modest service on the lower Colorado River for some years. Shortly after the turn to the 20th century, bare, scavenged remains of the iron hull were found, mostly buried, in sands a considerable distance from any channel of the Colorado River, the fate of abandonment or loss on what before dams had been the ever-changing channels of the Colorado delta. The hull was positively identified from unique modifications that were carried out in December 1857 while the vessel was assembled on the flats at the mouth of the Colorado. She has not been seen for more than a century. ♦ ♦

²³ Reaney Neafie & Co. [advertisement] in The Hibernia Fire Engine Company, No. 1. Have caused this volume to be issued in remembrance of their visit to the cities of New York, Boston, Brooklyn, Charlestown and Newark, in November, 1858, and to commemorate the honors and hospitalities extended to them by the public authorities, firemen and citizens of those places, and by their brother firemen, on their return to the City of Philadelphia, to each and all of whom it is dedicated as a memorial of gratitude (Printed by J.B. Chandler, Philadelphia, 1859), p. 109. (Historical Society of Pennsylvania)

I sat for some time on [a] bench with a solid citizen, who looked over the mighty scene for a long time in silence. At last he knocked the ashes out of his pipe on the arm of the seat.

“She’s got the punch,” said he, sighing. 24

‘God’s Handiwork’ is the reverent attribution by which some contemplative writers have explained the majesty and grandeur of the Grand Canyon and the Colorado River. **THE GRAND CANON** lists hundreds of works that boost the message. Incessant physical and chemical powers of erosion in a plateau land, carried on for millions of years, is another way to explain the origin of what is arguably the world’s most famous chasm. Again, **THE GRAND CANON** amply documents the publications that delve into the mystery; a mystery because geologists, while confident in their interpretations of the origins and ancient ages of the rocks exposed in the Grand Canyon, still confer and commiserate as they have for more than a century over conflicting hypotheses of how long it took just to carve the canyon, the sequence of events, and where even the Colorado River was before and during that time. 25

According to some writers, too, the process took just a few days, in a roiling aftermath of the Noachian Flood; their citations are included in this bibliography as well. To the indigenes of this land the canyon, its river and the people are a natural, cultural, and spiritual unity understood in creeds passed between long generations, of which this bibliography offers but a few glances of comprehension.

The sculpted-rock epic that is the Grand Canyon has long stupefied visitors, though appreciative awe was not originally on the list of reactions. Pedro de Castañeda

24 Emerson Hough (at the Grand Canyon), "What Uncle Sam Offers to Europe’s Tourist Trade", *Santa Fe Magazine*, Vol. 9, no. 3 (February 1915), p. 20.

de Nagera reported that in 1540 the first European visitors were stymied, having failed to reach even halfway to the bottom of the canyon, a surprising outcome for what seemed from the rim a short descent.  

The next non-native visitor to the canyon was the Franciscan friar Francisco Tomás Garcés, in 1776. He, too, was unenthused with the impenetrable, desolate landscape; a “prison”, he reflected.

More than eight decades later, in 1858, Lt. Joseph C. Ives, U.S. Army, came up from the Colorado delta on the _Explorer_, a small steamboat built in Philadelphia just for this trip. The vessel traveled all the way up to Black Canyon, nearly at the site of today’s Hoover Dam. Running onto rocks they ascertained a principal objective of the expedition—to map the river to its head of navigation. Ives divided his command, sent the steamer back downstream, and headed east across the top tier of Arizona, dipping into the Grand Canyon twice en route, at Diamond Creek and Cataract Creek. His impression of the canyon country as wondrous but “profitless” desolation led him to suppose that no outsiders would ever want to go there again—in giddy retrospect his most-quoted remark.

---

26 Item no. 2.1909. See also more on this first contact in the section herein MDXLVIII–MMCDLII.

27 Item no. 2.2132, a 19th-century edited translation of Garcés’ diary by Elliott Coues.

28 “Ours has been the first, and will doubtless be the last, party of whites to visit this profitless locality. It seems intended by nature that the Colorado river, along the greater portion of its lonely and majestic way, shall be forever unvisited and undisturbed.”

extensive official report highlighted with illustrations by two German artists who accompanied the expedition and with maps masterfully drawn by one of them.

A decade after Ives, hapless James White was rescued in bad shape from his rude wooden raft in the Colorado River near Callville, Nevada, miles downstream from the river’s sortie through the Grand Canyon. He is supposed to have run, trapped in the canyons, a desperate trip from Utah—not a mission of exploration, but an escape, he said, from Indians intent on killing him and his partners (one was killed on the spot, the second perished in the river). Most of it was a blur in his dazed recollection.29

A few years after the White incident, Civil War veteran Major John Wesley Powell gathered his thoughts on completing two well-documented pioneering trips of exploration down the Green and Colorado Rivers in 1869 and 1871–1872.30 His was the first Victorian brand of appreciation for the grandeur, solemnity, and science of the Colorado’s canyons. During the century and a half since then the Major’s accounts have so often been retold, in whole, quotation, paraphrase, and fiction, that they have not had time to tarnish, in any language; the cover of a recent Chinese translation of his monograph imaginatively portrays buckskin-clad explorers in birch canoes.31

A decade after the Major’s river exploits Capt. Clarence Edward Dutton, U.S.A., worked on Powell’s geological survey of the plateaus north of Grand Canyon. He was the first to integrate the geological origins of the landscape of the Grand Canyon and the plateaus cut by the Colorado. Dutton’s writing style has been called probably the most eloquent piece of government prose ever written—engaging, insightful, and contemplative, garnished with engravings and lithographs drawn up by the eminent artists, William Henry Holmes and Thomas Moran—science, feeling, and art.32

But the magistral line of Grand Canyon and Colorado River science had been surveyed by a less assuming writer, geologist John Strong Newberry. The first scientist to travel the Colorado, he steamed up the lower river with J. C. Ives in 1858, and rode along with the lieutenant’s army detachment to the Grand Canyon, working as both physician and naturalist as they passed the length and width of what would soon become Arizona Territory. Newberry was more in awe of the scenery than was Ives. He matched the map–realism of cartographer–illustrator F. W. von Egloffstein, salvaging reality from the impressionistic drawings by Egloffstein and Balduin Möllhausen, the

32 Item no. 21.918.
artist–writer of Ives’ and other’s western expeditions who went home to Germany and a prolific writing career turning out romance novels about the Wild West.\(^{33}\)

Newberry laid the ground rules for Powell and Dutton. He grasped the idea, correctly, that it was principally the actions of running water, even if largely ephemeral, that crafted the vast landscape they saw. He deduced that the canyons of the Colorado River and its innumerable tributaries were, pure and simple, the work of water, sand, and time; the prose of erosion. It would then be up to later geologists, beginning with Dutton, to interpret the hidden historiography of the broad landscapes, strata, and magnificent structures of the whole Colorado Plateau.

In a technical twist of priority, Möllhausen’s two-volume account of his western exploits, in German, published in Leipzig in 1860\(^{34}\), was first to publicize the geological observations of the expedition. Newberry’s exhaustive technical report\(^{35}\) did not appear in print until the following year as part of Lt. Ives’ long, official report.

34 Item no. 2.4616.
35 Item no. 21.2455.
"Geological Map No. 2 Prepared by J. S. Newberry M.D. Geologist to the Expedition."

This detail from John Strong Newberry’s colored geologic map of the Grand Canyon area, using Egloffstein’s topographic map as a base, shows the rudimentary understanding of the geological relationships of the rocks exposed in this region (depicted by the different colors), the result only of cursory examinations and views from long distances made during the Ives expedition’s travels across northern Arizona. The topography of the volcanic region around present-day Flagstaff (south of the major peak, “San Francisco Mt.”) and Williams (north of “Bill Williams Mt.” to the southwest of San Francisco Mt.), bottom center, is reasonably accurate because this was the region traversed by both the Sitgreaves and Ives expeditions. It depicts the misunderstood relationship of the Little Colorado River and its confluence with the Colorado River. The Little Colorado is shown as continuing through that region which is actually the easternmost Grand Canyon, north of Red Butte (the isolated peak, here presumed to be volcanic, on the “Colorado Plateau” (Coconino Plateau today) north of the San Francisco Peaks. (Red Butte is not a volcano but a remnant of the Triassic-age strata that once covered the entire region; it is capped by a layer of basalt.) Note also in this detail the journey to the village of the Havasupai Indians on Cataract (Havasu) Creek (northwest of Red Butte), which is misinterpreted as a tributary to the Little Colorado.

Joseph C. Ives, Report upon the Colorado River of the West explored in 1857 and 1858 (Government Printing Office, Washington, 1861), map bound in at the of Part III, Geological Report, Senate Executive Document variant only. (Library of Congress) [Item no. 2.3584]
supplemented with illustrations by Möllhausen and by the German cartographer on the expedition, Egloffstein. The separate maps by Egloffstein\(^{36}\) were widely noticed\(^ {37}\) as the first of their kind in the way topography was novelly depicted in shaded relief, serving as base maps for Newberry’s geological maps (previous pages).

Möllhausen and Egloffstein imaginatively conveyed Newberry’s scientific observations in landscape views that portrayed weird perceptions of the canyon’s proportions. Möllhausen’s enspired depths featured liberal verticality and rock slopes carved like steep sylvan mountainsides (above) that would be more familiar to Europeans and eastern Americans; his leisurely watercolors, not published by Ives, are more realistic\(^ {38}\) (see next page). Egloffstein sketched even gloomier canyon depths and, distinctly in contradiction to those impressions, wide, jittery, almost mnemonic, sun-bleached panoramas of the rock surfaces he saw (below, looking like nothing

\(^{38}\) Möllhausen’s watercolors were not published until 1995; see Item no. 2,3555.
"Der Rio Colorado, nache der Mündung des Diamant-Baches" [The Rio Colorado, by the mouth of Diamond Creek], lithograph by A. Adelmann, Leipzig, after Balduin Möllhausen; hand-tinted.

This view upstream on the Colorado River in 1858 depicts the river entering Diamond Creek Rapid, the first illustration of any rapid in the Grand Canyon. John Wesley Powell’s party passed through here by boat 11 years later (and perhaps James White on a makeshift raft two years earlier than that). The mouth of the creek itself is hidden by the rock outcrop at right.

The view is a reasonable rendition of the scene in life, though with some stylistic difficulty expressing the character of the metamorphic rock making up the cliffs above river level. And the colorist’s uninformed depiction of a turquoise Colorado ironically foretells the day when, a century hence, the river would run as a río verde, an algaphilous tailrace of the Glen Canyon Dam situated some 241 miles upstream from here. The dam now pens up the natural supplies of ruddy silt that inspired Río Colorado’s name. No longer are seasonably temperate waters of the natural river present; the dam discharges a perpetually crystal-cold, algae-favorable effluent from the chill deeps of its reservoir, Lake Powell.

Balduin Möllhausen, *Reisen in die Felsengebirge Nord-Amerikas bis zum Hoch-Plateau von Neu-Mexico, unternommen als Mitglied der im Auftrage der Regierung der Vereinigten Staaten ausgesandten Colorado-Expedition* (Otto Purfürst, Leipzig, [1860]), Vol. 2, [Plate 10]. [Item no. 2.4616. See also appendix herein containing notes on illustration collations in some volumes seen.]
anyone saw. Egloffstein’s maps, though, amply and startlingly make up the deficiency with realism. They have, despite liberties of feigned precision, keenly and ironically the appearance like modern radar-altimetry images (see “Map No. 2”, earlier illustration). Still, much more of the landscape that Powell would a decade later travel through for the first time was beyond the sketchy periphery of the maps, lands still the domain of indigenes, transients and tales.

Powell, regardless of attributors’ statements that he named “Grand Canyon”, receives full credit for inaugurating America’s—indeed, the world’s—cultural fascination with the canyon. Writing the record of his explorations conducted under the Smithsonian Institution, he published vivid recollections of the two river runs, though as if they were just the first trip of 1869, illustrated with views drawn by Holmes and Moran (who were not on the expeditions but were affiliated with Powell’s ongoing surveys of the greater region) and photographs from second-trip and rim studies by E.O. Beaman and John K. Hillers (also used by Holmes and Moran as references for their final drawings and paintings). Powell published the most engaging parts of his narrative as excerpts and installments in more popular venues, made even more captivating by reusing illustrations of landscapes, riverscapes, events, and Indians. Then there began a never-ending recitation through reprintings and rewritings and in quotations by other writers, which continues to this day.

Clarence Dutton wrapped up what Newberry and Powell had started, teasing out a geomorphological history from the geographical and geological stories; his explanations fairly stood their ground, unchallenged into the 20th century. He also muffled the commentaries on the canyon’s scenery expressed by earlier visitors to the canyon, replacing them with eloquent travelogues, artistically woven with geology that went as far as the eyes and mind could see. Dutton produced not just an amply-illustrated text, but amplified it with a dramatic, double-folio atlas. It contained maps (of course) and double-page lithographs of landscapes displaying Holmes’ realism and Moran’s impressionism, the graphic forms and idealism of Dutton’s prose.

During ensuing decades the Grand Canyon was more and more displayed and revealed in print and at the lectern. It was an enticing destination, one scenically, scientifically and spiritually appreciated—and increasingly well known to the masses.

39 Although see Item no. 2.16493; the authors suggest a mix-up amongst Egloffstein’s drawings.

40 Item no. 2.5132. See also the Addendum herein regarding earlier uses of the term “Grand Canyon” and its introductory section, “Who Did Name the Grand Canyon?”.

41 See citations for John Wesley Powell at least for the reprintings and selections from his works; authors too numerous to note here have quoted him, briefly and at length.

42 Item no. 21.918.
There were professional and lay writers and illustrators everywhere, commercial, contributory, and voluntary, recounting in hundreds of ways what one must go see for himself; and scientists’ lectures in chalk blended with public speakers’ magic-lantern exhibitions of light, exhibiting and dissecting land, fauna, flora, and human customs. Then at the canyon there were wranglers in saddles and motor guides in polished boots, who awaited trailside and lobbyfront to conduct and introduce the well-versed and well-dressed to places most would never see again. And some visitors would complete the cycle, sharing their uniquely indescribable experiences in ink and voice.

So of course everyone who followed Powell’s path—on the river actually (few that they were for a long time), or overland as like Ives and Newberry but in ever more-crowded visitations—not only had something to say about the canyon but had to say something about it. “If you have not written an appreciation of the Grand Cañon,” wrote Emerson Hough, “you cannot be received into the selectest circles of American literature.”43 They gushed and quaked about the canyon’s “awful” majesty and moods; the sunlight, moonlight and starlight; the silence, snow and storms; and the humbling and promising power of the canyonbound, desert-bound river. “Sublime” was a word worn out. Hough saw the canyon “littered with . . . parts of speech—jagged and fractured adjectives; exclamation points by the liberal peck.” Writers declared to have witnessed the procession of God Himself. Painters freely interpreted that scene with strokes of inspiration. For scale, Niagara Falls, New Hampshire’s Mt. Washington, and multiple Yosemites and Yellowstones have been slipped by writers inconspicuously into the chasm’s maw; the Empire State Building placed meekly in the Inner Gorge, too, and Statues of Liberty stacked one upon another. One character opined instructively, “there ain’t no possible way of paintin’ a sign you could make out with the Lick telescope [and] a full-grown World’s Fair goin’ full blast with the blower on you wouldn’t even see across that Canyon.”44 And so on, and on.

Paradoxically, many writers are convinced that books and articles about the canyon must contain the disclaimer that no words!—no picture!—nothing!—can truly portray the Grand Canyon. Then they proceed to do so, with pennants. Rarely has a writer been both truthfully awestruck and brief:

Every description I have read of the Canyon has fallen so far short of its stupendous grandeur that I will not attempt one. I am thankful I have seen the greatest wonder on earth.45

43 Emerson Hough, "What Uncle Sam Offers to Europe’s Tourist Trade", Santa Fe Magazine, Volume 9, no. 3 (February 1915), p. 20.

And yet, another declared contrarily:

In spite of the custom that demands that the Grand Cañon be called indescribable and the many pages used to prove it, I say when it comes to descriptions, “Not for me.” Read your literature. Nothing it says about the Grand Cañon is overdrawn.46

For Powell, planning his first river trip, there was no Grand Canyon–Colorado River reading list. Ives and Newberry were pretty much it; sole sources, fortunately substantive and authoritative, even though beyond their horizon still was a land left to the imagination, and for Powell to prove. There were earlier works that covered the lower Colorado River, principally as a matter of geography, but they noted little more than it emptied this part of the continent to the sea, or digressed into human histories of the area. Those references, obscure even in Powell’s time, were not informative for his purposes anyway; where he was going there really had never been reports, certainly no reliable ones. Geologist and theologian Edward Hitchcock, comfortably and collegiately ensconced in New England, had casually mentioned before the Ives expedition set out that the Grand Falls of the Little Colorado River (below), northeast

of present-day Flagstaff, drop about 120 feet. The depth of its gorge he said was “less probably than that of the Big cañon”37—so little was known of the Grand Canyon. Powell relied on a judicious evaluation of itinerant hearsay and Indian lore, too. And some told him he would die; which he did, at least according to reports from unscrupulous attention-getters while the Major was out of touch on the river journey.

The book-length documentary Powell wrote about the explorations, with its ample illustrations, finally did draw the Colorado River across the map of the West. It confirmed the mind-boggling grandeur of Grand Canyon, cemented Powell’s peculiar brand of organizational abilities, and tried to satiate a mindful Congress that public monies and supplies drawn on Army stores had been judiciously used—and he spun the sacrificial tale of hard, dangerous, and deadly times along the way.

A year before his book about the expeditions was printed, Powell began excerpting the best parts of the documentary to the popular media of newspapers and monthly serials.48 There, without the encumbrance of the weighty, drably colored clothbound volume, readers chapter by chapter were drenched by studied but casual explanations of geography and geology, grand beyond compare; they were wearied by the never-ending manhandling of boats in summer heat and dousings and batterings by furious rapids in ruddy water so silty that one could not see through it in a bucket; and they fretted over the men’s gripes and grumbling stomachs. Even as the explorers pared down short and spoiled rations, Powell determinedly mapped how the Colorado River wended its way, deeply, on its marathon through the last blank areas on the national map. They forged ahead, climbed cliffs carrying barometers to precisely measure the incredible canyon depths, and choicelessly aimed with the river wherever it ran. The audience held breath as disasters of fire and water struck, and gasped as the Major grasped a cliff by one hand—his only hand. They sighed when William Dunn and the Howland brothers, Oramel and Seneca, abandoned the expedition, climbed out of the canyon and were never seen again. There was the scenery of fantastic geologies of marble, granite and frozen lava, a sleepless night in the rocks drenched by cold rain, the joy of finding an untended Indian garden, and . . . the foreboding entry into the “Great Unknown”, the dark-walled defile of the innermost Grand Canyon itself.

47 Item no. 21.1451. Hitchcock relied on the published report of an army expedition across present-day northern New Mexico and Arizona in 1851, under the command of Lt. Lorenzo Sitgreaves; see Item no. 2.5820. In fact, the drop of the falls is some 185 feet, higher even than Niagara Falls—and still of course almost incomprehensively less than the depth of Grand Canyon. (It is in Sitgreaves’ report, too, that appears the first visual depiction of the Grand Canyon—although seen from 70 miles away. That illustration is reproduced in the Nomenclatural Appendix herein.)

48 Item 2.5127, and others following it.
The story Powell told had to have punch, too: there was competition. Shortly before, Henry Stanley had found the long-missing, legendary Dr. David Livingstone on the shore of Lake Tanganyika, deep in Africa. Both were accomplished explorers, and this was sensational, a tale of toil and tribulation that built in historic crescendo. Stanley had a worldwide throng of armchair celebrants who followed his story of exploration, privation, and encounters with strange, native peoples\(^\text{49}\); yet almost no one of Stanley’s celebrants followed in his footsteps. Powell’s following was different. Many who cheered his exploits in the new West \textit{wanted} to experience his adventure, through inkpress and seated in the lecture hall of course, but if possible, in person. They viewed the canyon from the stage of its rim, or saddled up for the descent to the river (more harrowing than reality, as recollections by survivors were wont to be\(^\text{50}\)).

Concurrent with Powell’s second expedition was an expedition led in 1871 by army Lieutenant (later Captain) George M. Wheeler on the lower Colorado River into westernmost Grand Canyon—heroically, pointlessly rowing and dragging boats \textit{upstream} to Diamond Creek \textit{(below)}. Even at the time, that exploration was ques-

\begin{figure}[h]
\centering
\includegraphics{image}
\caption{“Colorado River Party Reaching Mouth of Diamond Creek. 1871.” The Wheeler expedition poses for a photograph by Timothy O’Sullivan, among the first photographs of the Grand Canyon. The mouth of Diamond Creek is across the river in this view. Wheeler wears the black hat. The photo is rendered as a lithograph, a curious conversion to what long was the traditional illustration style, which reflects contemporary complaints that the expedition futilely grasped old glories. The geography volume was delayed in publication by 17 years, making its purpose even more questionable.}
\end{figure}

\textit{49} Henry Morton Stanley, \textit{How I Found Livingstone; Travels, Adventures and Discoveries in Central Africa; Including Four Months’ Residence with Dr. Livingstone} (London, 1872, and soon republished widely and in translations).

\textit{50} Although see a probably justified recounting by Leonard Dewitt Sherman (Item no. \textit{2.15624}), who tumbled on his own over the edge and lived to tell about it (with a little embellishment).

This detail of the atlas sheet depicts the eastern portion of Grand Canyon, a bit larger area than that part which would be delimited in 1919 as the original boundaries of Grand Canyon National Park. It is a curious amalgam of sources and accuracy. The topographic expression in the canyon and the plateaus is generalized. Most of the pronounced drainages of the South Rim plateau reflect the unfounded suppositions of F. W. von Egloffstein’s maps from the Ives expedition [see earlier herein] (the South Rim drains mostly away from the canyon). But on the whole it correctly follows the form and character of the Grand Canyon and the path of the Colorado River, as determined by the Powell expeditions.

Note particularly that this part of the Grand Canyon all is named "Marble Cañon", a misnomer. Marble Canyon is actually only the narrow, north-south part of the canyon along the Colorado River as depicted on this sheet, ending at about the confluence of the Little Colorado River ("Colorado Chiquito" on the map), where the Grand Canyon begins.

The "Wheeler Survey", as is more conventionally known the U.S. Geographical and Geological Surveys West of the 100th Meridian, covered a portion of the Southwest, including the western Grand Canyon. Ostensibly for the sake of timely presentation of the survey’s results and to extend the geographical mapping over the entire Grand Canyon region, Wheeler encouraged the integration of surveys by J.C. Ives on the lower Colorado River and the region south of the Grand Canyon, and elsewhere by J.W. Powell along the Colorado River canyons, which helped precipitate criticisms of his survey as being for the most part superfluous, exploring regions that were already fairly well known and usurping credit for a greater region than that actually surveyed and continuing some previously held, incorrect views.

tioned as a redundant exercise, revisiting what Powell had proved in 1869, wasting manpower and public monies for little practical contributions in what already was a region becoming well known. The criticism is upheld by modern historians as well, with considered opinions and analysis of Wheeler’s objectives and leadership style.\(^{51}\)

During the 1880s Powell, by now a widely recognized scientist–administrator, and more so his colleague Dutton, brought the Grand Canyon to the fore of geological instruction. It did not explain many mysteries of the earth’s history, but the canyon cut open an astonishing portion of it, unobscured for hundreds of miles. It added to a growing command of physical geography, quite literally at its grandest; and here was something for the historical and physical geologist alike. The celebrated British geologist, Archibald Geikie, even used one of the fantastic engravings by W.H. Holmes for a fold-out frontispiece in his master text-book of geology,\(^{52}\) an extraordinary placement of American scenery and science in a field of study long dominated by European examples. And two decades after Powell’s expeditions, the canyon became for the first time an international destination. In 1891, the 5th International Geological Congress, a periodical “Olympics” of geology, which then convened in

---

\(^{51}\) In this preamble, I focus on the explorations and surveys that made significant contributions or changes to the ways in which the Grand Canyon and the Colorado River are seen. There are other important early trips to the canyon and down the river, professional and avocational, perhaps most notable among them being the railroad-survey expedition conducted in 1889–1890 by civil engineer Robert Brewster Stanton (see under “Stanton” and search for “Stanton” noted generally within citations). This bibliography contains numerous citations that pertain to the early forays.

\(^{52}\) Item no. 21.1149.
Washington, D.C., and partly under Powell conducted a field trip to the Rocky Mountains and the Grand Canyon. The Scottish geologist H. M. Cadell sketched views in the canyon (see previous page and below), and although they are amateur works they also are the first delineations of Grand Canyon scenery from the eye and pencil of a geologist.

Looking back, Powell’s literary legacy has lived richly. Powell gathered together ever more popular interest and political concern in the West, which long outlived him. He was a champion of prudence in the collection and apportionment of western water; as head of the U.S. Geological Survey he was the chief pundit of scenery and mineral wealth in the nation, and the Map-maker General; and as director of the Bureau of Ethnology he oversaw the national treasure of Native American artifacts, handicrafts, cultures and languages. Throughout, the Major was a perpetual hero of derring-do. He was honored in introductions and reminiscences for valor and sacrifice: in the Civil War he lost his right arm at the Battle of Shiloh, and he was the successful challenger of the Colorado River. This was more than enough for a public humbled and revived by acts of personal courage. Yet there was more: He made the canyon a Grand one, once and for all. Here was something for every soul of the traveler’s world to see, to experience, and to tell the tale again.

53 The Grand Canyon field trip, arranged by John Wesley Powell, traveled by train from Denver, Colorado, to Flagstaff, Arizona, then by stage to the Grand Canyon, during which trip they were forced to bivouac during a storm. At the canyon they were hosted by John Hance and conducted to the Colorado River on his mining trail (Hance Trail) in Red Canyon. Those who signed Hance’s guest book were published in G. K. Woods’ 1899 transcription of that register; those names are noted as Item no. 2.13871 herein. See also the frontispiece to Part 24.

54 See herein the introduction to the special compilation on the nomenclature of "Grand Canyon".
This “heart of the Grand Canyon” topographic map, an art form unto itself, has been widely reproduced and was for most of the 20th century a mainstay of geology courses teaching the construction and interpretation of topographic maps. François E. Matthes surveyed this and nearby quadrangles using traditional alidade and plane table methods, a sensational achievement even for the days long before the modern precision and convenience of laser- and GPS-based techniques. The field methods included blazing new trails in the Grand Canyon. See for example Item nos. 24.386, 21.2080–21.2082. It was also used as the base map for the first separate geologic map of the quadrangle, by John H. Maxson, 1961 [Item no. 24.134].

“Bright Angel Quadrangle (Coconino County), Arizona”, 1:48,000-scale topographic map, U.S. Geological Survey, 1903; topography by François E. Matthes. Later printings also carried on its reverse the text, “The Grand Canyon of the Colorado River”, by geologist Levi F. Noble. [Item no. 24.133]

(Library of Congress)
Advertising agencies and corporations were quick to grasp the Grand Canyon’s widely recognized scenery and touring potential, capitalizing on the thin implication that a yearning to see the canyon also was a yearning for a company’s products (below, for example). But unarguably, the most successfully assertive corporate claims to the canyon were those of the Santa Fe Railway, which one might have been led to believe all but owned the canyon. From the turn to the 20th century and all the way to the Second World War the railway threw its formidable building and advertising departments into the fray, campaigning for the resources of individuals, couples, and trainloads of conventioneers. The Santa Fe spewed thousands of booklets—collectors’ items today—extolling the Grand Canyon and things not to be missed along the way to it, then disgorged thousands of tourists from Pullmans just yards from the canyon rim (and the Santa Fe’s luxury hotel).

The Santa Fe’s advertisements plastered magazines far and wide, and their own Santa Fe Magazine turned out article after article, poem after poem, letter after letter, never missing an issue to instruct its employees how to promote a tremendous expanse of open air, while luring a worldwide clientele to the very edge of the world. They tossed promises to a primed, beguiled and reasonably prosperous touring public that the company’s efforts, for hire and for sale, would change lives and elevate spirits. They built a huge miniature Grand Canyon and Painted Desert for the 1915 Panama-Pacific International Exposition in San Francisco, which visitors could sample from the windows of actual Pullman cars—in Santa Fe livery of course—as they slowly rolled for a half hour through an exhibit staffed with payrolled Indians going about their “everyday” lives.55

55 Item no. 2.13705.
At the real deal, the Santa Fe had it all, hosted by the hospitality firm of Fred Harvey. Their ads were handcrafted lures: A ride “on the rim boulevard” or saddle trips into the deepest depths, then easy-sitting on the veranda. “Three days spent at the Grand Canyon equal three weeks spent anywhere else.” Patent luxury for the relaxed and weary: tub baths and Fifth Avenue dining “in the wilderness”. Indian crafts for every kind of purse and wallet at the Hopi House—and real Indians to watch (“primitive Indians” the ads said), dancers, weavers, potters and jewelers for edification and sales. And of course, scenery a thousand miles wide. Fred Harvey’s promotional people hired one-time canyon miner–hostler John Hance (below), Grand Canyon’s eccentric scenic interpreter and yarn spinner, just to amble and circulate. “Have you ever met John Hance?” asked the Santa Fe’s ads with a nationwide tease—“a dramatic raconteur” and “a pleasant provaricator” he was. Then folks knew to seek out Hance as much as they did the canyon and the Santa Fe’s hired Indians. He was, after all, the man who said he dug out the Grand Canyon.56

---

56 In this digital document, search on ”John Hance” throughout.
At this peak of activity, the Santa Fe faced down the entrepreneurial Kolb brothers, Emery and Ellsworth, who in 1902 had established a photographic studio on the rim of the canyon just at the time the Santa Fe began plans to build nearby its crown jewel, El Tovar Hotel (see next page). The Kolbs made a business of exploring and photographing the canyon, but for their bread-and-butter they pictured tourists on mules lined up on Bright Angel Trail—keepsakes by the thousands. The Santa Fe later feigned studio productions, too, commissioning souvenir photo-books with the “El Tovar Studio” cachet (left), which were just enlarged colored-postcard views from Detroit with a tassel.

But while the marketing power of the Santa Fe Railway and the likes of the Kolbs’ homespun successes made the canyon known far and wide, a destination of choice for thousands—eventually millions—we must look farther back again to find that one glowing point from which it may be supposed that the canyon’s vast inspirational grandeur came — the Grand Canyon’s own cosmological Big Bang. It was at Point Sublime, high up on the canyon’s North Rim, projecting into the open space of the canyon’s majestic, sunrise-to-sunset panorama. Stooped over the shoulder of artist William Henry Holmes, Clarence E. Dutton pointed out some aspect of the geologic story he was interpreting, which Holmes froze for perpetuity—the prose of erosion in a picture of grandeur.

❖ (AFTER) “. . . sitting upon the edge we contemplate the most sublime and awe-inspiring spectacle in the world.” Staffage in W. H. Holmes’ “Panorama From Point Sublime. (Part I. Looking East.)”

This artistic Santa Fe Railway advertising perspective of El Tovar Hotel takes considerable liberties to make the scene dramatic and appealing. Note a crowd of people on the rimside balcony on the hotel’s top floor. And while the hotel is faithful to its form, the canyon rim turns to carve closely in front of the building, where in fact the hotel at this point sits perpendicular to the rim. The open air depicted beyond the hotel’s front steps is where, in reality on solid rock, was built the Hopi House, the artful gift shop catering to the buying public in search of authentic Indian crafts, who could “visit” there Indians in their home. Even so, Hopi House is not omitted here but is imaginatively portrayed at the right by a shrunken, adobe-like version of a Hopi pueblo, with Hualapai-style wikiups in a “forest”.

Scenic treasures, California and Grand Canyon, Arizona. Compiled, engraved, and printed by Tom Jones, publisher of scenic souvenirs (Cincinnati, Ohio, expressly for Fred Harvey, Kansas City, Missouri, 1910). [The illustration was also used widely in the Santa Fe’s commercial advertisements.]

The advertising view at the top of this page is based on the painting, El Tovar, by Louis Akin, 1905 (here). Akin’s painting was widely distributed as a chromolithograph to commemorate and promote the opening of the new hotel. Note that in the advertising view the occluding trees are moved; clouds take on an amorphous appearance, like that of a distant mountain line, a portrayal that would be for many people a more familiar landscape profile than the startling plane of the canyon’s North Rim; and the whimsical redrawing of the inner canyon buttes add architectural or anthropogenic attributes to the canyon’s features.
Ellsworth Kolb left Grand Canyon to live in California; Emery stayed on, residing in the house that was built in stages precariously on the steep slope of the canyon edge in Grand Canyon village. For decades Emery showed and narrated in the Kolb Studio’s movie theater a film the brothers had made in 1911 when they rowed the Green and Colorado Rivers from Wyoming to California. Ellsworth finished the trip by himself to the delta in Mexico in 1913, then wrote a book about their expedition, illustrated with the brothers’ photography and published by New York’s Macmillan Company. Emery sold copies of the book for the rest of his life, usually signing both his and Ellsworth’s names until his brother’s death in 1960. *Through the Grand Canyon from Wyoming to Mexico*’s title may have overstated the geographical expanse of the Grand Canyon, but it drew a steady audience. In 27 variant editions from 1914 to 1971, it is the second-longest run ever among Grand Canyon–Colorado River titles continuously in print. It even beats Powell.\(^{57}\)

The Santa Fe ever more strenuously objected to the Kolbs’ privateering and tried to side-track canyon tourists by commissioning its own, distractingly named “Lookout Studio”, where incidentally one *couldn’t* get their photo taken on a mule. The Lookout was tucked in along the rim where sauntering tourists might encounter *it* and its handicrafts for sale before they reached the Kolb Studio, its movie theater, and the brothers’ book—a kind of parenthetical “bargain basement Hopi House” to the Santa Fe’s *grand entrée* at the rail depot. The National Park Service (having come on the canyon scene in 1916), with greater administrative punch eventually wanted to remove all vestiges of the Kolbs, studio and business alike. But the cantankerous Emery stood his ground literally and firmly. By eventual agreement, now-historic Kolb Studio would revert to the Park Service after Emery’s death. And this happened only after Emery worked on the canyon brink to the end—productively and, with greater defiance, longly. He died in 1976, aged 94. The studio lay empty for years. Today it is a publications sales outlet with a stunning view, its movie theater now appropriately prime art-exhibition space. Kolb Studio is craftfully restored, brought up to modern safety standards, and managed since 1995 by the Grand Canyon Association.

Thus the Grand Canyon has always cast a prismatic display of history, science and culture, ancient and ongoing, for the general public and scholarly investigator alike. But it is, if nothing else is said for it, just as Theodore Roosevelt said during his

---

\(^{57}\) See the Kolb listings in this bibliography, and the summary Appendix herein on the book’s various editions. Although the Kolb book is presently available in reprintings, too, they are separated from the Macmillan editions by a break in availability. Powell’s accounts have been reprinted several times, but separated by periods when they were not currently in print. The longest continuously-available publishing run is the 70 years held by N.H. Darton’s geological *Story of the Grand Canyon*, a Fred Harvey title produced during 1917–1987 (see the separate Appendix for it herein).
presidential visit to the canyon in 1903, “one of the great sights which every American, if he can travel at all, should see”—indeed, not just every American, but everyone on Earth.

Riding the wave of executive ebullience, in 1904 the photographic firm of Underwood & Underwood produced a set of stereoscopic views of the Grand Canyon specifically for the home and educational markets. This was the way to bring the canyon to those unable to travel to see and experience the real thing, or to bring the enthusiasm of travel to those who would. No polite parlor, nor conscientiously well-off classroom, was without a stereoscope and sets of cards to go with it, spanning the globe in 3-D. The Grand Canyon set of 18 stereocards (see next page for examples) was neatly boxed, accompanied by a complementary-sized 64-page guidebook and map describing and locating the views. The guide was selected and written by none other than Frederick S. Dellenbaugh, youthful member of John Wesley Powell’s second expedition down the Colorado River in 1871–1872 and thereafter the principal promoter of things canyon, river, and Powell. Short of riding the Santa Fe Railway to the Grand Canyon itself, there was no surer way to experience the depth, breadth and feeling of the canyon.

Yet even with credentialed pronouncements by great writers and public figures, and authentications from lesser-known thousands, one still may not be assured satisfaction. In 2008 a professor from Greece, anxious to return to Las Vegas, described the western Grand Canyon region as “a land of endless, boring landscapes and colors.”

58 See the Addendum herein.

(BELOW) "Descending into Grand View Trail by a short, steep mining path, Grand Cañon of Arizona", stereoview no. 8. The Grandview Mine was a copper mine operated by Peter D. Berry and others. [See item no. 21.297 for a history of Grand Canyon mines. And see elsewhere herein a postcard of a slightly different view of this trail group.]
Mounts Trumbull and Logan lie on the North Rim in the western part of the Grand Canyon district, on the Uinkaret Plateau, an area known for its volcanic features. Throughout this bibliography are references to Mount Trumbull (also Mt. Trumbull), a search will reveal numerous items relating to geology and history alike. The area is also known for its early lumbering activities, which involved the import of a portable, steam-powered sawmill and the harvesting of timbers for the Mormon temple in nearby St. George, Utah. Mount Trumbull was named by John Wesley Powell for Senator Lyman Trumbull of Powell’s home state of Illinois, and Mount Logan for Illinois Senator John A. Logan, a Civil War general.

INTRODUCTORY NOTES

The Grand Canon is a comprehensive record of publications that relate to the Grand Canyon of Arizona and to the lower Colorado River along its race and drift through the North American Southwest (see map herein). It comprises a definitive, categorized, and continuously updated listing of more than 48,600 published items about or including this region or portions of it, recording more than four and a half centuries of international culture, study, reflections, uses, and administrative concerns. It is a means of access to information.

The monographic format of THE GRAND CANON, presented digitally in PDF (Personal Document Format), and the corresponding Internet Edition, a field-searchable database online (www.grandcanyonbiblio.org), together are powerful tools for academic and casual researchers, and for administrative managers in private and public sectors, to identify previous work in general and works that may be pertinent to specific tasks at hand or anticipated projects. The Internet Edition is expedient; THE GRAND CANON allows more detailed study and discovery. It is, after all, incumbent upon those who are doing the work to ascertain what most usefully contributes to their objectives. The bibliography summarizes work and commentary that has been published, of course, but it documents precise citations so as to resolve the kinds of ambiguity that come from mis-citations and foreshortened citations in print, and other misunderstood or misquoted information. It serves also as a base upon which new, extended, and selective resources can be built. The bibliography is thus targeted to the world community of researchers, and to the numerous governmental and administrative entities that exist in the region that it covers. ✤ ✤ ✤

Purpose, Audience, and Benefits
Administrative Context and Perspectives
Utility of This Work
Concluding Note

\textbf{THE GRAND CANON} has left its scholastic foundation as a plain bibliography; now it is a comprehensive documentary on its subject matter, addressing its use to researchers and other bibliographers as always, but now also purposely to a broad spectrum of administrators, resource managers, public-issues advocates, and avocational users. It is a \textit{canon} of the worldwide work of individuals, organizations, and official agencies that relates to the Grand Canyon and the lower Colorado River. In addition to its original academic uses, it is directed now also to non-academic administrative and factual uses; no longer simply a compendium of past publications. The overall work further includes commentary and, as special additions, some investigations of applications that borrow the term, “Grand Canyon”, as it has been used for other localities on earth and other worlds and as used casually and formally in analogy, metaphor, and neological constructs.

Citations herein are source documentation for official activities, investigative and administrative projects, scholarly studies, activities of private organizations, travel and other general pursuits by individuals; as well as personal reports, reflection, and opinion. The citations identify official records, items of directed research and investigations, and things for casual reading. Within 32 subject areas the citations embrace worldwide productions in 55 languages. They address the humanities (including but not limited to history, biography, literature [memoirs, essays, fiction, verse, and so on, including works for and by youth], visual and performing arts, philosophy, and religion; and works of analysis, criticism, and speculation); social, natural, physical, and environmental sciences; health and safety; engineering and technology; administrative oversight; legislative and judicial affairs; concerns of public-interest and advocacy organizations; and the interests and activities of indigenous peoples. Publications are in inkprint, special media for the visually handicapped, and audio, audio-visual and digital media. Cited items include all reading age groups and levels of education. Productions have been made mostly as inkprint items but there also are audio, audio-visual and computer-based media, and specialized tactile media for those who have vision impairments. \textit{THE GRAND CANON} serves current needs for
documenting and assessing work published about activities and resources within the geographical area it covers, and it provides the base material by which more in-depth and customized lists may be constructed, as well as providing the foundation for value-added productions and critical overviews.

Geographically, the items listed herein focus first on the physiographic Grand Canyon of the Colorado River, covering some 2,400 square miles and extended adjacent lands. The river corridor covered by this work passes along some 800 miles—the length of Glen, Marble, and Grand Canyons below Glen Canyon Dam, drifting through several dam-impounded lakes that span the boundaries of Arizona, Nevada and California, finally trickling out to sea in the river’s delta, now virtually dry, in the Gulf of California astride the Baja California–Sonora boundary in Mexico. Coverage also includes the dams erected in the Colorado River below Grand Canyon (with particular attention to Hoover Dam), their appurtenant works, and the plans for dams that were to be built in the midst of Marble and Grand Canyons. Coverage also spreads onto lands adjacent to the river, reaches into the tendrils of aqueducts built to quench desert farms and cities, and runs down into the ancient Salton Trough below sea level in desert California that has for ages refilled naturally by Colorado River overflow, and again, dramatically, by an accidental breach of the Colorado's canalworks in the early 1900s.

One may question the utility of embracing both the Grand Canyon and the extended lower Colorado River from Glen Canyon Dam to the sea, a region whose parts are topographically, geologically, ecologically, climatically, culturally, and politically dissimilar. In fact, their human histories ever since prehistoric times and, in written records from the time since the Spanish incursions of the mid-1500s, have been increasingly, now inexorably, entwined. Their natural histories overlap in numerous ways, too; particularly the recent geological history of the Colorado River, which, at least during the time while the lower river system developed, is indivisible even though it crosses two distinctly different physiographical provinces of North America. Historically, one can investigate one part of the region easily enough without having to attend to things that pertain to other areas, but complex interrelations reveal themselves as one focuses on larger areas or when they are viewed from a multidisciplinary perspective. To thematically separate the lower Colorado River from the Grand Canyon is simple; historical separation, though, is difficult; geologically, impossible. Similarly, separating Glen Canyon Dam from the desert Colorado River below Hoover Dam, or separating Hoover Dam from the Grand Canyon, belies the dramatic environmental, economic, cultural, and political influences each has had upon the other even at distance. And separating the Native American cultures of the

60 See herein the map that delineates the area covered by this bibliography.
Grand Canyon region from those of the lower Colorado River region, including the indigenous cultures of the delta, diminishes the commonality of social and economic impacts weighed by Anglo activities everywhere in the region; likewise such a separation would mute the voices of these people’s dependency upon the Colorado River and obscure the cultural heritages that arose and continue by understanding and of necessity pursuing life in this land.

This part of the world has given people much to talk about, as the content of NEW TESTAMENT testifies. Those who are drawn here, whether residually, professionally, avocationally, or spiritually, can find uses in this bibliography, an admixture of vital and casual works. Items are written by, and aimed toward, greatly different audiences of all ages, who represent socially, culturally, scientifically, and technologically different communities and times, worldwide. In the present day, administrators and resource managers, workers in public-advocacy organizations, researchers in numerous fields of historical, scientific, and literary study, and general users alike will find here items that hold documentary, evidentiary and historical values, though the quality of individual productions and their values vary substantially and subjectively.

The works cited here were created by administrators, public-issues advocates, politicians, lobbyists, jurists, travelers, scientists, students, philosophers, clerics, entrepreneurs, employees, civil servants, and professional and lay writers, poets, artists, composers and thinkers from cultures, organizations and nations around the world. Some are people indigenous to the Grand Canyon region; most are wayfarers and transients—the great, notable, every-day, overlooked, and intentionally anonymous alike. The opinions, observations, censuses, interpretations, and results are those of citizens and foreign nationals (adults and youth alike); the heads, agents, and representatives of governments (both American and foreign); and private, commercial, not-for-profit, professional, and spiritual organizations (again, American and foreign)—a melting pot of constituents, visitors, agendas, perspectives, philosophies, faiths, educational levels, and age groups.

PURPOSE, AUDIENCE, AND BENEFITS  THE GRAND CANON provides a long-term record of diversely created works for the use of researchers, public servants, resource and public-issues advocates, and interested citizens wherever they may be. Compiling this document is a contribution to the stewardship of the Grand Canyon and the Colorado River, thus also a contribution to cultural resources of the world.

Completing the first installment of the Internet Edition of this bibliography during the autumn of 1999 coincidentally marked the 25th anniversary of the start of the Grand Canyon–Colorado River bibliographical project. THE GRAND CANON
coincidentally marked the 30th anniversary of the first published edition by a test release in 2011. It is the authoritative, arbitrating version of the bibliography, upon which the continuously updated Internet Edition is based.

THE GRAND CANON is the evidentiary record of the work of individuals, organizations and official agencies historically since 1539 and in print since 1548. That work relates in some way to the Grand Canyon of Arizona and the reach of the Colorado River from the lowest section of Glen Canyon, through Marble and Grand Canyons, and on through the Colorado Desert to the river’s delta in the Gulf of California in Mexico. Culturally, THE GRAND CANON also is the evidentiary record, through modern studies, of human presence in this region since prehistoric times; and geologically, it is the intrinsic record of the land itself since time immemorial. As such, THE GRAND CANON cites publications that broadly document human perspectives, understandings, interpretations, activities, and uses of the resources in this landscape; aesthetic, philosophical, and tangible alike.

Of all of the items individually listed herein, each was produced in multiple, identical copies. One or another of these copies is available to interested parties somewhere, though pragmatically some items may stubbornly elude rediscovery or will be difficult to access because of a scarce number of originals, sparse distribution, or losses due to any number of reasons. Such limitations are, however, beyond the documentary purpose of the bibliography—with one notable exception, that of the entire run of a book, all but one copy, lost due to theft before it was distributed.61

The purpose of THE GRAND CANON is to serve as a public collection of information that collates information on printed publications, audio-visual works, and published digital products. Within broad guidelines it includes everything that (in whole or in part) pertains to, or mentions in context, the Grand Canyon or the lower Colorado River. The material cited stops short of incessant newspaper listings and ephemeral Internet resources (see additional comments on exclusions). There is no other informational source like THE GRAND CANON, nor even anything truly comparable for any other landscape or real estate overseen by the National Park Service and other government agencies (see a separate study on this, herein). It is built around a standard, monographic bibliography that now is electronically searchable. Divided into 32 categories by subject, it is the only categorized reference list about the Grand Canyon and the lower Colorado River.

The Internet Edition of the Grand Canyon–Lower Colorado River bibliography was different from an edition in the usual sense because, for the first time, the online version broke the binds of print. That was a leap of faith by everyone involved—

61 Item no. 2.8541.
compiler, publisher, and user. Most striking of that edition is the fact that there is one location for the bibliography, accessible by all who have access to the Internet. Each user will have a specific purpose for looking at it, but, unlike the print editions, no one will see it in its entirety.

Compared to its predecessors in the print medium, the ways in which the online bibliography is was a dramatically new experience. There will, however, always be the need to browse; many people prefer to work that way. It is still the best way to locate everything of special and peculiar interest, by bringing attention to issues and topics that otherwise might be overlooked in a historical retrospective or administrative accounting of activities. But the Internet Edition immediately gave users the ability to search and extract electronically, something previously impossible using the “hard copy” editions.

*THE GRAND CANON* retains the format of a printed monograph. This is by design, in the event that it becomes the only surviving, current copy of the bibliography. It does contain hyperlinks so that computers utilizing web browsers can provide the means to migrate between different parts of the document; but they are not necessary to the overall structure of the bibliography or for access to its citations. The bibliography still functions perfectly as a resource even if the hyperlinks are not active.

In a sense the resources of the geographical regions embraced by *THE GRAND CANON* embody intangible cultural heritages such as those that world bodies like the United Nations Educational, Scientific, and Cultural Organization (UNESCO) actively seek to safeguard on behalf of indigenous peoples and world communities. UNESCO's 2003 Convention for the Safeguarding of the Intangible Culture Heritage further strives to raise an awareness and appreciation for heritage at local, national and international levels. The convention focuses on the human aspects of cultural heritage (including oral traditions, performing arts, social practices, practices concerning nature and the universe, and craftsmanship). An analogous consideration of these efforts may see the Grand Canyon and Colorado River as the bearers of heritage and the stage for cultural practices; and indeed, the Grand Canyon itself is a World Heritage Site. There is extensive documentation of these aspects in thousands of individual and organizational publications, which preserve in tangible form the record of cultural and other activities. The broad palate of *THE GRAND CANON* preserves this evidence.

The many parts of *THE GRAND CANON* ensure that administrators, scholars, students, and the general community within the American nation and among its indigenous peoples, and around the world, retain a permanent documentary record of ideas and work about the Grand Canyon and Colorado River. These ideas and findings have been made available through widely distributed publications and through
productions with channels of limited distribution. Many are works of creativity and thoughtful reflection; many more are casual notes and comments. Others come from hard and studious research. And still others are derivatives of judicious evaluation and decision by government and other official agencies, or as the result of studies of policy options and officially sanctioned projects and investigations; and from legislative and judicial mandates. To these add as well critical evaluations and opinion of each, official as well as from an engaged citizenry.

Only a user is in a position to recognize things that are pertinent to a task. It is easy to perceive here a huge, mysterious nebula of impertinent works when one’s focus on a project is pragmatically narrowed by time and budgetary constraints, expecting to find just certain shining stars; perfectly fitted answers to questions. But one project will be very different from the next one. For *THE GRAND CANON* to retain its value to all users and purposes, it is created as comprehensively as possible. It will be used for an inestimable but probably lengthy time to come by historians, biographers, ethnographers, archaeologists, sociologists, biologists, ecologists, geologists—in fact, any focused topical researcher, whether they be administrators, advocates, students, professionals, the passing curious, or those rarely-encountered individuals who are infatuated with bibliographies, bibliographiles. The most time- or budget-conscious users, like administrators, actually may not use the bibliography except in the most pragmatic summary form or for statistical compilations, but research tasks they may have assigned to their staffs will in turn result in those staff being more informed about the details of this work and the material that is generally available. In this sense it will be very useful toward locating sources that address administrative issues and needs over the entire period of time that work has been conducted in these regions.

**ADMINISTRATIVE CONTEXT AND PERSPECTIVES** ✩ The Grand Canyon has long been acclaimed as one of the unofficial Seven Wonders of the Natural World (sometimes homogenized simply as Seven Wonders of the World); even distinctly the “eighth wonder of the world” according to 20th-century Swedish adventurer Sven Hedin, 62 and surely it is the first wonder to many aficionados of this land. The Grand Canyon and the Colorado River are recognized as having significant historical, cultural, geological, and biological resources. Grand Canyon National Park’s own “themes”, as generally outlined by the park in a 2011 “Park Themes” document, are “inspiration”, “water”, “geology”, “biology”, “preservation”, and “Native American connections”. 63

---

62 Item no. **2.11947.** Later writers have also used the “Eighth Wonder” tag.
63 Item no. **13.2783.**
The Grand Canyon and surrounding areas have been accorded numerous official designations relating to cultural, historical, and other areas of significance. Grand Canyon National Park has been designated a World Heritage Site. In a UNESCO-assisted arrangement, the park and the Yuntaishan World Geopark in Henan Province, People’s Republic of China, established a sister-park relationship to pursue beneficial projects of technical and professional cooperation. The village of Grand Canyon, Arizona, is a National Historic Landmark District. A number of the structures there are individually designated National Historic Landmarks; yet more are listed in the National Register of Historic Places. The North Rim community at Grand Canyon is also a National Historic Landmark District. The Arizona Trail, a National Scenic Trail that travels from the international boundary with Mexico to the Arizona–Utah boundary, crosses the Grand Canyon on two of its most historic trails and passes through the Kaibab National Forest. Other human-made productions within the areas covered by THE GRAND CANON—Hoover Dam for one well known along with its specific parts and appurtenant works, and, for one less well known, the trans-Grand Canyon telephone line, both products of public-works projects of the 1930s—have been recognized by professional and historical organizations as significant achievements of technology, engineering, and architecture, among other accords. Commemorative markers of all kinds abound throughout the region, on, by and inside structures, and along highways, walkways, and footpaths.

Efforts to designate the Grand Canyon as a national park began in 1882, when the first but unsuccessful proposal was made during the year when first appeared Clarence Edward Dutton’s magnificent text and atlas, *Tertiary History of the Grand Cañon District*. It was not for another decade that some measure of executive or statutory reserve was accorded to part of the canyon. In 1893 President Benjamin Harrison signed into existence the Grand Canyon Forest Reserve protecting the eastern Grand Canyon area. In 1906 President Theodore Roosevelt established the Grand Canyon Game Reserve, enacting official protection of the wildlife there; then in 1908 Roosevelt set aside the Grand Canyon National Monument by executive order. After several years of proposals in the United States Congress, and after the National Park Service was established in 1916, Grand Canyon National Park was created in 1919 (*40 Stat. 1175*). It was substantially increased in area to its present size in the Grand Canyon National Park Enlargement Act of 1975 (*88 Stat. 2089*, Public Law 93-620), embracing Marble Canyon and the western Grand Canyon exclusive of the Hualapai Indian Reservation.
Principal Federal Administrative Units of the Grand Canyon Region

(U.S. National Park Service)
Within the broader scope of *THE GRAND CANON*’s coverage of published works are found various other national monuments, recreation areas, and other federally designated lands and reserves. Most prominent among them are the Vermilion Cliffs and Grand Canyon–Parashant National Monuments, Kaibab National Forest, and Glen Canyon and Lake Mead National Recreation Areas. Also sharing boundaries with Grand Canyon National Park are the Navajo Nation, and the Havasupai and Hualapai Tribes.

So many official acknowledgments of cultural, natural, or technological significance pale against the intangible measure of popular acclaim. The Grand Canyon in particular, but also its surrounding lands and the lower Colorado River, have ever since the mid-19th century been in the top numbers of remarkable landscapes; remarkable for their aesthetics, topography, geology, ecology, history, and cultures. For more than a century a statement of encouragement by President Theodore Roosevelt has been quoted in popular, scholarly, and administrative venues. In a speech he gave at the Grand Canyon in 1903 he said that the canyon is “one of the great sights which every American, if he can travel at all, should see.” And for those who cannot travel there—or for an interested worldwide clientele as well—there are innumerable books, travel guides, magazine articles, and audio-visual productions about the canyon and the river that bring the marvels into homes and classrooms, and through Braille and other tactile productions literally into the hands and minds of readers. In fact, even at the time when Roosevelt spoke to an assembled crowd in the fledgling village of Grand Canyon there already were large numbers of books and, particularly, articles about the canyon.

The Colorado River in the Grand Canyon, in addition to falling under the purview of the National Park Service within the national park boundaries, is administered under other auspices of the U.S. Department of the Interior in the national recreation areas immediately up- and downstream of the national park. On the rims, neighboring landscapes and rangelands are also administered by the Bureau of Land Management. Immediately adjacent to the south and north, too, are the national forest lands administered under the U.S. Department of Agriculture’s Forest Service. Within Glen Canyon National Recreation Area the Interior department’s Bureau of Reclamation operates Glen Canyon Dam, the functions of which affect cultural, biological, and geological resources downstream in Marble and Grand Canyons. Accordingly, various protective legislations have been implemented in this part of the corridor, which partly direct how the dam’s power production facilities are operated. Multi-state compacts and international treaties (with Mexico) regarding water supply and use, dating as early as a century ago, further direct dam operations

---

64 See *note* in the Foreword herein.
today. During 1983–1996 (including phasing-in and -out periods), the U.S. Bureau of Reclamation conducted the Glen Canyon Environmental Studies (GCES) program, which, with the cooperation of other agencies and commissioned studies passing through two principal administrative phases, conducted the first truly comprehensive series of investigations in the Colorado River corridor relating to hydrology, fluvial geomorphology and sedimentology, resources of biology and physical ecology, and archaeology; all as contributing to the Environmental Impact Statement pertaining to the operation of Glen Canyon Dam. The Glen Canyon Dam Adaptive Management Program, also under the auspices of the Bureau of Reclamation, currently cooperates in the management of the dam with more than two dozen other stakeholders including Native American tribes. The science-information provider for the Adaptive Management Program is the Grand Canyon Monitoring and Research Center, which had phased in at the end of the GCES program under the auspices of the U.S. Geological Survey, another Department of the Interior agency. Immediately downstream from the national park the Bureau of Reclamation operates Hoover Dam within Lake Mead National Recreation Area; its impoundment backs up into the national park in the western end of the physiographic Grand Canyon, which had affected the hydrological and ecological regimes there long before modern politically and socially organized responses to environmental concerns. The dams and their appurtenant works in the lower Colorado River are likewise operated by Reclamation.

A significant portion of the Grand Canyon and the lower Colorado River corridor is administratively overseen by federal and state governmental agencies of the United States and Mexico, and by the tribal governments of indigenous peoples. Accordingly, THE GRAND CANON aids these and other groups with its uniquely comprehensive accounting for published research and reference materials that are available about this region; and perhaps even more importantly it serves as a documentary record, international in scope, of the work done on, and the perspectives held of, the lands, waters, airspaces, resources, and human needs that are administered or protected by these agencies.

The administrative units with oversight of lands in the Grand Canyon–lower Colorado River region fall within different departments of the United States, Mexican, and Native American tribal governments. They can be noted in summary order as one passes through the geographical range of this work from the Arizona–Utah boundary to Mexico; and together they demonstrate the interlocking political and cultural characteristics of the region. The principal units are Glen Canyon National Recreation Area, Grand Canyon National Park, Vermilion Cliffs and Grand Canyon–Parashant National Monuments (both of which also are in the Bureau of Land Management’s National Landscape Conservation System), Kaibab National Forest (portions of which
occur both north and south of the national park), Bureau of Land Management acreages, Lake Mead National Recreation Area, Bureau of Reclamation facilities, federal and state wildlife refuges, and Mexican national interests; and throughout there are the sovereign lands and interests of Native American nations, tribes, and cultural groups. Near to the Grand Canyon there is also the formally established Little Colorado River Navajo Tribal Park in the Navajo Nation that abuts the eastern end of the physiographic Grand Canyon. In the western portion of the Grand Canyon the expansive Hualapai Indian Reservation occupies the southern side of the canyon. While the Hualapai Tribe has not designated tribal parks, they do operate a commercial tourist enterprise known as Grand Canyon West, a name that has since given this part of the Grand Canyon separate, *de facto* geographical status. On the Kaibab Plateau north of the canyon the Kaibab Squirrel National Natural Landmark spans the boundary between the national park and the Kaibab National Forest; and the U.S. Federal Highway Administration’s ceremonially designated Kaibab Plateau–North Rim Parkway (Arizona Route 67), a National Scenic Byway, guides travelers through scenery of significance to the tourist community of North Rim on the brink of Grand Canyon. The region embraced by *The Grand Canon* also includes federally designated natural and wilderness areas and, along the lower Colorado River, wildlife refuges, including those of the Salton Sea region in California. In the river delta region of Mexico there are the Upper Gulf of California/Colorado River Delta Biosphere Reserve and the Pinacate/Gran Desierto de Alta Biosphere Reserve. To all these add the stakes of state agencies in Arizona, Nevada, California, Baja California, and Sonora, and local agencies in every city, town, and community of the area; as well as the rights accorded to commercial enterprises of all kinds and private-property owners. And to apply a broader oversight to all, add the legislative and judicial branches of governments that influence activities, holdings, and accountability, ranging from international treaties to federal and state regulations and local ordinances.

Much of the physiographic Grand Canyon is overseen by the U.S. Department of the Interior, particularly the National Park Service, but within the broader region covered by the citations in *The Grand Canon* there is a conglomerate of federal departments and agencies that have oversight over adjacent lands, waters, and airspaces. These include, but are by no means limited to, such diversely different government branches as the Bureau of Land Management, the Bureau of Indian Affairs, the Fish and Wildlife Service, the Federal Aviation Administration, and (on navigable inland waters) the U.S. Coast Guard. In addition, areas are overseen by state and local agencies, the people and governing agencies of Native American tribes, and various not-for-profit and for-profit organizations. Some areas are private inholdings like ranches, mines, and tourist enterprises. A few properties have been
turned over to federal jurisdiction or given to the care of not-for-profit organizations. Incidental events also are overseen by federal agencies, such as National Transportation Safety Board investigations of air and highway transportation accidents.

Eleven federally recognized Native American tribes have historical and cultural connections with the Grand Canyon. The administration at Grand Canyon National Park in particular, as well as those of adjacent national monuments and national forests, hold formal inter-governmental consultations and have executed with tribes individual agreements that pertain to land and resource uses on the federal lands.

The apportionment and use of waters of the Colorado River is the result of a complex legislative and judicial history of negotiated regulation and responsibilities among the seven U.S. states within the Colorado River basin—Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming—and through treaties ratified by the legislative bodies of the United States and Mexico. Concerns and usage variances go back more than a century, but which were first formalized nationally in the Colorado River Compact of 1922, which remains the principal document of domestic guidance among the seven cosigning U.S. states. National and international responses to natural and human-caused changes in water supply, water quality, and overall environmental conditions, have also dramatically affected interstate and international relations, beginning with the devastating breakouts of the Colorado River around the turn to the 20th century, the result of failed levees, which allowed the river to flow unimpeded to the ancient lakebed of the Salton Trough. The outbreaks refilled the basin below sea level, now called the Salton Sea. Since then, the means of water usage within the United States’ portion of the Colorado River basin has resulted in increases of salts and pollutants in the irrigation waters taken from the river, and Mexico now receives a far more brackish content of river water in greatly diminished flows. The desiccation of the Colorado River delta affects human cultures and the natural habitats of animals and plants. Now, too, we begin to face physical, economic and culturally debilitating, and politically-challenging, effects of a natural return to more usual climatic conditions of protracted drought throughout the Southwest—nature ignores negotiated, legislated, and adjudicated schemes of apportionment.

The greater Grand Canyon region, and by extension the lower Colorado River corridor that begins within the Marble–Grand Canyon complex, is an arena of human interaction unto itself, affected by decisions and private uses made by its various administrators and owners; from environmental surveys to the surveys for dams, from the inventory of biological resources to the productions of mines. Into this region have come, for innumerable reasons, millions of new residents, and hundreds of millions of passers-by of all ages. A relative few of them have left written records of their
impressions through exhaustive and casual publications alike, expounding on what they did or found there—in prose and verse from global commercial presses, government printers, and the smallest private concerns; in recorded impressions of music, sung and instrumental; in photography, still and motion-picture; in artistry through painting, drawing, and sketching; in maps of all scales, purposes, and accuracy; and in the tenuous medium of computer software.

While the THE GRAND CANON lists numerous materials that relate to legislative acts, judicial decisions, and other official activities, it is not yet so comprehensive to declare that it preserves a conscientious, continuous record of decisions, policies, historical precedents, or technological procedures. Similarly, it is not a perfect record of avocational activities of citizens and visitors. Neither is it a listing of unpublished resources, the traditional trove for historians and litigants. And for the time being, there is no central source for the interdisciplinary needs of managers and researchers who have responsibility for, or who work in, the regions covered by THE GRAND CANON, although by default this work serves partially this function.

THE GRAND CANON can stand both as resource manager’s reference and a resource for interpretation and education. It does not figure into Grand Canyon National Park’s “Foundation Statement” prepared in 2010 because the bibliography is not a National Park Service product nor sponsored by the Park Service; it is sponsored by the not-for-profit Grand Canyon Association, which cooperates independently with the park in educational, interpretive, and other outreach programs. The bibliography stands responsibly and responsively as it has for four decades. It continually grows and is available to a world community of professionals and avocationists. It documents for all responsible interests the quantity and quality of human attention to the Grand Canyon–lower Colorado River region.

THE GRAND CANON further serves as a broad statistical base, from which evaluations and accountings of selected subjects, topics, or authors can be made. A chronology of any of these can likewise be ascertained by using this document. As for its administrative value, the citations herein direct users to pertinent works that are available to answer questions. In this fashion it provides the information to administrators who require an understanding of the scope and content of work that has already been done. Administrative key-point lists can focus resource managers on sources, arranged topically, that will be of greatest utility in understanding what kinds of previous research is more readily accessible, and to expose underserved or inadequately noted areas of attention.

Management and research issues continually change and refocus, as do public responses to and opinions on these issues. These in turn create new productions that pertain to this work. Lay productions about the Grand Canyon and the Colorado River
follow a similar path, responding to official sanctions and decrees, or follow new paths and revisiting old ones to describe and reflect upon human emotions and needs that relate to these regions. Whereas research and reflection can and do change, the mission of THE GRAND CANON is not to anticipate and refocus such work, but to provide source lists for informed guidance in the work of administrators, academics, and any variety of private groups and individuals.

UTILITY OF THIS WORK While various bibliographies and reference lists for the Grand Canyon or the Colorado River had been compiled during the 20th century by individuals and official agencies alike, they restricted their listings to principal works then available and noticed, resulting in predictably similar, albeit updated, products. None of them contained a comprehensive accounting of the profusion of periodical articles, although a few took notice of selected early items.

When Grand Canyon National Park was created in 1919, the Director’s report for the National Park Service that year included a “Bibliography of Books, Government Reports, and Magazine Articles on Grand Canyon National Park”—five pages containing 96 citations. In some respects it is a microcosm of THE GRAND CANON in that it contains general, scholarly, and fictional works, books and magazine articles alike; but it differs in that all are in English. There is also no indication of how these items were selected; one may presume these were what was at hand or suggested to its compiler.

From the standpoint of administrative uses in the region covered by THE GRAND CANON, managers in federal and state units and agencies have had no open, comprehensive source to things that have been done within their jurisdictions other than the official and working reports generated by their administrative entities. In the general and professional literature both there is a tremendous amount of observation and opinion regarding the units these administrators and managers oversee, who often work at a disadvantage when required to manage disciplines with which they or their delegees may be less familiar. While often there may be insufficient time for exhaustively detailed analyses, a perspective of previous work can be gleaned from compilations like the present document, which may thus provide for these managers greater interpretive insight.

No comparably robust accounting of publications exists for any unit administered by the National Park Service, the National Forest Service, or other federal and state public-lands agencies. In fact, the only comprehensive listing that approaches this one in size and content is the Greater Yellowstone Bibliography (GYB) online, hosted by the University of Wyoming Libraries. However, the content, structure, and utility of the Yellowstone production differs greatly from THE GRAND
CANON. Thus THE GRAND CANON is a unique, utilitarian research tool for administrators and for scholars like historians, scientists, and biographers, even other bibliographers. That it embraces now six different centuries, 16th to 21st, testifies to a long play of human affairs.

The 16th to 18th centuries in this region recorded human interactions in a geographically far-flung but sparse field of publications, focused on the lower Colorado River, produced by international parties with interests in the region. The 19th century saw the first sponsored explorers in three centuries spanning across the region, discovering again the Grand Canyon. Later in the century came an inflow of scenery entrepreneurs, and scenic and cultural investigators among geologists and geographers, archaeologists and ethnographers, biologists and nascent ecologists—and a few permanent residents and curious, hardy travelers, the harbingers of throngs of tourists. The 20th century bore the infusion of greater populace, both permanent and transient, and all manner of specialized researchers, in the humanities and sciences mostly. Plans for, and partial implementation of, a series of dams throughout the Colorado River basin brought beneficial and damaging effects alike to culture, environment, and administrative practices—not to overlook variant effects on the quality of life in general, including tourism, the irrigation of farms, and the safeguards of air quality and silence to mention just a few aspects. Thus far focuses in 21st century have generally shifted away from large-scale investigations to specialized, usually short-term projects and, in the areas of water-management, increasing concerns over drought, climate change, and water apportionment.

Predictability and unpredictably, what happens in one part of the region affects something in another. For example, were it not for the tremendous efforts to irrigate farms in the American Southwest beginning in the late 1800s with flood control in the lower Colorado River and growing needs for widespread electrification, the drive during the mid-1900s to build dams that promised to flood the inner Grand Canyon may never have occurred. Historical cause and effect is of course not unique to the Southwest and is more perfectly viewed in retrospect; the concept applies likewise to any region in the country or in the world. But overarching, current, multidisciplinary bibliographical accounts for specific areas are scarce, thus there is an argument for saying THE GRAND CANON occupies a unique utilitarian position within its scope of political and physical geography.

While activities and natural occurrences in the upper basin of the Colorado–Green Rivers of Utah–Colorado–Wyoming have clear impacts upon the lower basin and the greater Grand Canyon region, THE GRAND CANON judiciously excludes that northerly part of the Colorado Plateau due only to my limitations of time, experiences

---

65 See elsewhere herein for a comparison of the two bibliographies.
and expertise. Except in the area of water management and its thicket of legislative, legal, environmental, and cultural entanglements, the exclusion of the upper basin from *THE GRAND CANON* does not detract from the utilitarian value of the work. Even so, many of the water-management works cited herein do by their nature embrace the entire Colorado River basin, although such works are cited because they encompass the Lower Basin.

Inasmuch as new citations continue to be added to this document—old works as well as new ones—it is a work never finished, never absolutely comprehensive. Its strides toward comprehensiveness move toward compiling a product that cannot anticipate what will be of interest or use to any user, today or a century from now. It is my personal experience, as a researcher, as a librarian and archivist, and as an administrator, that once the assumption is made that “routine” or “redundant” items will not have enduring “useful reference purpose”, or will not be relevant to most anticipated kinds of queries, there will soon enough be a call for resources that can only be provided by precisely those kinds of works. Even things that may normally be deemed to be “out of scope” to a current inquiry may have unexpected application or perspective on the inquiry, something which only user—researchers will recognize. So for them as well as for overarching administrative needs *THE GRAND CANON* does strive to be comprehensive. And administratively, having such a resource in hand is a documentary support point for funding requests, for establishing work assignments, and for itemizing challenges and accomplishments.

The burden of determining what is useful sits with the user; the burden of determining what should be available to the user sits with those who have custody of that material; and the burden of determining what is fiduciarily effective and responsible in response to an agency’s official responsibilities or institution’s mission sits with the administration that oversees the custodians. While this breakdown of perspectives and responsibilities are pragmatic, there are bound to be some aspects that fail the needs or expectations of one party or another. But in any case what is practical to keep or maintain may be at odds with what is useful to all potential users.

In the case of a reference work like *THE GRAND CANON*, preserving the intellectual asset contained therein is the same as respecting “collective memory”. Admittedly, some titles cited in this bibliography may be in scarce numbers and will be very difficult to locate if one needs to see a copy. Nevertheless, the object of *THE GRAND CANON* is to provide a total accounting—a documentation of as many created materials as can be found—despite rarity or convenience of access. This is meant to be, item by item, comprehensive to scholars, administrators, and general users for any and all reasons they may have to use it.
An added utilitarian aspect of *THE GRAND CANON* is the addition of special sections on investigations into other uses of the term “Grand Canyon”. As a world wonder, the nominal attribute, “The Grand Canyon”, has been copied and rephrased for hundreds of other locales, on Earth and on other celestial bodies. In some fashion, formally or much more often informally, these places are called “The Grand Canyon”, the “Grand Canyon of” a certain place, and variously as “another” Grand Canyon; occasionally even there are “grander” and “littler” canyons. By far most of these other nomenclatural grand canyons pass beyond the purely bibliographical purpose of *THE GRAND CANON* because a majority are extracted from Internet websites that otherwise are excluded from the bibliography; and for that reason, too, individual citations are omitted (see more in the respective introductions to these compilations). However, they comprise a unique perspective of the extenuating powers of impression that the Grand Canyon has conveyed ever since the first “other” Grand Canyon was named, the Grand Canyon of the Yellowstone. Moreover, the Grand Canyon’s overwhelming attraction to comparison is Wealthily displayed in the associative and creative traditions of analogy and metaphor; a separate listing herein itemizes many examples, likewise from published literature but chiefly from web-posted material. I believe that it is imperative to capture these numerous uses, at least in summary form, and complete lists are appended to the end of *THE GRAND CANON*.

Finally, in her Foreword to the 1990 second edition of *Bibliography of the Grand Canyon and Lower Colorado River*, former Grand Canyon National Park librarian Louise Hinchliffe observed, “while a librarian’s budget or biases may limit accessions to ‘worthwhile’ books, the conscientious bibliographer must record impartially both treasures and trash, the enduring and the ephemeral”. Many bibliographies offer up everything that is “worthwhile”, of course. For example, within the scope of this bibliography there are Francis P. Farquhar’s classic 1953 *The Books of the Colorado River and the Grand Canyon* and its half-century sequel by Mike S. Ford, *The Books of the Grand Canyon, the Colorado River, the Green River and the Colorado Plateau, 1953-2003*, both of them “selective” bibliographies, which together fill out the primary reference and want lists of librarians and collectors. Together they serve more generally as a critical list of significant and particularly interesting works in the field.

*THE GRAND CANON* takes the further step, offering the lists by which librarians and collectors may fill out their comprehensive reference collections. It serves users who pursue any number of specialized, even personalized, lines of inquiry; research which requires a broader compilation of sources that is not limited by those that may be high-profile, accessible and familiar. This work sails into the broad archipelago of articles, newsletters, pamphlets, booklets, and simply obscure monographs of all
kinds; it sights the beacon in a Tower of Babel of dozens of languages; it encounters shallow literary harbors filled with flotsam, too. This is a biblioscape more familiar to the users of interlibrary loans and photocopy requests—students, researchers, legislators, and legal aides—which is also the special domain of independent searches, fresh insights, novel interpretations, and the academic foodstuff for theses and dissertations of the next generations of historical, scientific, social, and cultural scholars. This lower-profile, but vast, grouping of materials also offers to administrative officers a broad historical look at the depth of interest and issues that concern the areas they oversee, not just the few shining stars. THE GRAND CANON surveys the main currents of literature, science, and administration, and reveals the undercurrents of activities, perceptions, reactions, and opinions of citizens, constituents, clients, and consumers.

Occasional items, whether from among “worthwhile” titles or from among the “flotsam” of mass-market and throw-away copies—and those that might be considered too trivial, worthless, or ridiculous—may be key to a user’s search for pertinent sources of information or for perspectives on peculiar topics. For scholars and general researchers both, commonplace and serendipitously found works may redirect lines of thinking or open new avenues of investigation. For administrators, the broadly important and the particular or obscure item all may help consolidate ideas of how the areas of their oversight are perceived and used, and of the needs that attend to the areas under their purview.

THE GRAND CANON serves researchers and administrators as a tangible record—an audit—of published materials about the Grand Canyon and the lower Colorado River. It is a resource with worldwide input on one geographical region with the broadest possible span of private and public interests. It is the evidentiary record of elective, creative, sponsored and officially authorized activities of individuals, organizations, institutions and government agencies, published privately and in popular, academic, commercial and official venues. It is a record of perspectives, understandings and actions that pertain to cultural, environmental, literary, and administrative viewpoints of personal and societal interests. This is a researchers’ tool; and it is a unique reference tool for resource managers who work within federal, state and other jurisdictions covered by this work, and for professionals in public-advocacy and not-for-profit organizations that have concerns in this region. The citations document for agency decision-makers sources that record resources and the utilization of the lands under their purview. Trends in personal, professional and official interests may be detected in analyzing citations spanning decades and centuries. Subsets of citations may serve as foundations for specialized and applied uses, scholarly studies, and administrative record.
Why “Grand Canon”?  

The title, THE GRAND CANON, I had used in the late 1990s for the ongoing, working copy of the Grand Canyon–lower Colorado River bibliography; what became the 2000 Internet Edition. It was devised purposely, somewhat whimsically as we shall see; but its use was prudently discouraged by the website host’s editor. How many casual visitors to the website, expecting a “bibliography” and unaware of the significance of these words, might also have seen the “The Grand Canon” as the metaphorical “Grand Canyon” of typographical errors!

During the first decade online the bibliography nearly doubled in size. Having been publicly available since 1981 in a more academic venue, this comprehensive and ever more voluminous project redirected itself to a more diverse audience. It is no longer exclusively a work either of or for scholarship, but one for broad and focused investigations both; for academic, managerial, and casual interests alike. While the database function of the online resource acts like a bibliography, THE GRAND CANON is seen as a contiguous whole. This calls for a title that is both more assertive and enticing than “A Bibliography of — — ”. So I recast “A Bibliography of the Grand Canyon and Lower Colorado River” as a “canon” — specifically, and specially, a grand canon. It is a comprehensive, documentary guide to the published productions about

---

66 Already I can take note either of the folly of my retitling this work or resign myself to the human nature of inattentiveness. In February 2011 I informally distributed a test version of this digital product, which was cataloged into one library’s collections as “The Grand Canyon” (since corrected). This may have been an excusable lapsus; however, my given and surname both also were misspelled, another party was attributed as publisher, and the description of the digital disk indicated that it contained sound. I can imagine a researcher (or collector!) relying upon such a catalog record, errors undiscovered, unwittingly sent on hunts for an elusive, “rare” variant or edition that does not exist.

67 [This footnote repeats an earlier one, so as to make its content also available in this Introduction.] By “published” is meant productions reproduced in multiple copies either for wide or limited distribution, regardless of their intended audiences or cost to recipients. These include: inkprint (books, pamphlets, articles in journals and magazines, sheet music, maps, and so on); tactile products (Braille or Moon type, for example [see also frontispiece to Part 5 of this bibliography]); audio recordings (including analog phonodiscs [“records”] and audio tapes [like cassettes]); analog films (with or without sound, in various formats); transparency sets (“slides” and “filmstrips”); digital audiovisual tapes (like VCR-format videos); digital disks (both audio and audiovisual, like CDs and DVDs); and computer software for public distribution and reuse (usually distributed on “floppies” [flexible disks, although later, smaller formats are enclosed in rigid housings], “CDs” (Compact Disks, more fully known as “CD-ROMs”, Compact Disk–Read-Only-Memory), and “DVDs” (originally Digital Video Disks but later, to also include data disks, Digital Versatile Disks). Reproduction in “multiple copies” further implies that access will be possible to any of numerous, identical copies in various locations, and that copies may be transferred from place to place without
the region. And further, there is much more to this compendium, as one sees on the
Navigation Page. If one questions whether by this it is “A Bibliography or Not?” (it is), I
refer you to that section of the Preface.

By adding a descriptive subtitle that notes “published items” are listed herein, I
engage potential users who are in non-academic occupations and avocations. The
categorical term “bibliography” I feel has to be avoided in the overall title now because
this work embraces so many things that are technically not like the familiar, bookish
medium of inkprint; it may not attract the notice of those who may search for audio
recordings or videos, for example. The work includes tactile productions for the vision-
impared, audio works, audio-visual works, and computer media—and it allows itself
to embrace newer media that are appropriate to add when they become available.

The word “canon” comes into the English language from a Greek noun that can
mean “measuring rod”; it also appears in languages other than English. Usually a
canon refers to bodies of scriptural works, ecclesiastical laws, rules, or guiding
doctrines, but the term further embraces various literary and other expressive forms.
A canon can be an authoritative or comprehensive list, or an indispensable body of
material, particularly that which relates to an absolute sum of like references. In the
case of THE GRAND CANON this is every publication that can be genuinely said to be in
some fashion “about” the Grand Canyon or the lower Colorado River, in whole or in
part, even comments in passing. I think “canon” may be defined even as a set of
materials that has basic but comprehensive usefulness, especially if the work is
unique. If Wright Howes, editors notwithstanding, got away with his remarkably
clumsy (yet precisely unavoidable) title U.S.iana for his master bibliography of books

loss or be reproduced again by photocopy or other means. Although some rare or scarce items—a
few may now be unique due to the vagaries of misfortune—will be difficult to locate or to gain
access to, such concerns are beyond the scope of the present work, which serves only to audit
material that has been produced, regardless of original scarcity, subsequent survival, or access
restrictions imposed by the repositories that hold them. Productions posted to or available from
Internet websites, even if deemed to be “published”, are purposely excluded from this compendium
because they are ephemeral—there is no assurance that access to such works will always be
possible; and even hyperlinks can be rendered useless when the target locations are changed in
any way, even though the item may still be present elsewhere. Once these failings can be
conveniently and reliably remedied, a webography for the Grand Canyon–Colorado River can be
derived from the electric universe of “live” and archived websites. If for some reason none survive,
it is a moot point and THE GRAND CANON will continue to serve as it always has.

“Canon” also appears in mathematical notation, whereby it signifies a computation for types of
state-space models in matrices.

68
embracing the geographic area now known as the conterminous forty-eight United States, I am happy to sit in his good company with *THE GRAND CANON*.

*THE GRAND CANON* includes a nomenclatural appendix that collates numerous cultural usages of the term “Grand Canyon”, as applied to other geographical features and as used literarily in analogy and metaphor. This added material is like a *musical* canon that has a melody and repeated imitations of it, fitting well with the overall bibliographical sense of this work. In also extracting concepts of the physical and conceptual Grand Canyon for other applications, each example in these literary compilations is a hyponym to the real Grand Canyon as their hypernym.

Then, too, “*THE GRAND CANON*” recalls the spelling, “Grand Cañon”. During the mid- to late-19th century the Spanish word *cañon* appeared widely in non-Spanish publications, particularly in reference to the imposing declivities of watercourses (often ephemeral) in semiarid regions of the American Southwest. In this form *cañon* was used well into the 20th century, but as time progressed the transliterated *canyon* was favored. While the borrowed *cañon* appeared most often in publications written in English, other non-Spanish languages borrowed the word, too.

In America the word *cañon* had been acquired anew through long-time Spanish interests in the Southwest. There, explorers, interlopers and new residents encountered landforms—canyons—that were unlike those found in many parts of the world familiar to Europeans; and the long-resident Spanish of the Southwest had the word for it. As the use of *cañon* funneled into everyday and scientific literature and into the legislative and judicial dialogues of capitals and courts, it appeared typographically as often with as without the *tilde*, as *cañon* and *canon* both, though it was always to be pronounced *kan-yun*. (In many cases this was dictated by available fonts or convenience. Instances may be found where, within the same item, lowercase “ñ” appears in plain text, but where set in bold “n” is used.) By the 1930s *cañon*, in non-Spanish publications, had almost entirely disappeared from use.

I find in retrospect that the title, *THE GRAND CANON*, stands more clearly in textual discussions than does the phrase, “this bibliography” (or some such construct).

---

69 Wright Howes (compiler), *U.S.Iana (1650-1950); a Selective Bibliography in Which Are Described 11,620 Uncommon and Significant Books Relating to the Continental Portion of the United States* (R. R. Bowker Co., New York, for The Newberry Library, revised, enlarged ed., 1962), 652 pp. [Note, however, that even this revised edition’s title is not precise for its date of publication, for by then Alaska—also part of the “continental” United States—had entered into the Union.]

70 Within the scope of *THE GRAND CANON* the latest English-language publication thus far found that purposely used the spelling “cañon” throughout, though apparently for artistic effect, is: Barry Goldwater, *People and Places* (Random House, New York, 1967), 87 pp. [Item no. 2.2955]
Even when it is used in the same sentence with “the Grand Canyon”, “THE GRAND CANON” disambiguates itself; it is clear which is the place and which is the bibliography.

Besides, any overwhelmingly stodgy work like a bibliography would do well to embrace spriteness and whimsy.

❖ History and Methodology

THE GRAND CANON began in September 1974 as a bibliographical list of publications on Grand Canyon geology. I was then a second-year student of geology at Rutgers University. What follows here, as a matter of record, is a recollection of how the bibliography was compiled, and how its various editions were constructed and revised. Some of the technical aspects I mention will be foreign to readers of just a generation or two from now, perhaps technological jibberish.

The first compilation, in 1974, was a rudimentary list of references about Grand Canyon geology, taken first from William J. Breed and Evelyn C. Roat’s then-newly published Geology of the Grand Canyon, a copy of which I had purchased at Grand Canyon that summer. By 1976, following on a broadening personal interest in the Grand Canyon, I was compiling citations in all subject areas. These were handwritten on yellow, ruled 4 × 6-inch index cards. Of course, at that time I had no idea what had previously been done toward creating a Grand Canyon–Colorado River bibliography.

In the late 1970s, I prepared a typewritten manuscript of the bibliography and began to inquire of academic publishers their interest in a Grand Canyon bibliography (there was encouragement but no takers). In 1980, the Grand Canyon Natural History Association [today the Grand Canyon Association] did express interest, and the bibliography was published by them in 1981 (Grand Canyon Natural History Association Monograph 2). Working with the Association’s editor, Tim Priehs (pronounced Preez), the bibliography was typeset from yet another, somewhat updated, typewritten manuscript (this was before the days of digital submissions); and I corrected the galley proofs. The printed volume was issued in solid-black, non-glossy pictorial wraps, which was a surprise to me because I had not anticipated such starkly interesting covers—perhaps the epitome of what is meant by “ink on paper”. Neither

---

71 Item no. 21.413. This is also is the first title collected for this immense gathering.
72 See the Survey herein, which includes a summary of earlier productions.
73 See Appendix A to Part 1 herein.
the paper nor the binding were in any sense archival, perhaps foretelling its useful lifetime since it was outdated in short order anyway.

Thereafter during the 1980s, I produced several typewritten supplements, which I privately distributed to a few libraries and individuals as photocopies and, in one final update, a literally cut-and-paste and photocopied full manuscript. For a while, some of the supplementary typescripts appeared in OCLC and similar library databases. As informally distributed documents these have since been culled from these systems. Should any such notices be found now, one should bear in mind that these documents are neither unrecognized “editions” nor formally published supplements.

In the late 1980s, I completely revised the bibliography, increasing the number of topical sections from ten to twelve and revising the citation format; most notably, eliminating abbreviations. Citations included in the first edition (Monograph 2) were redistributed to their new categories in the new edition. I retyped the entire first edition using the word-processing software WordPerfect 5.1, which functioned in the environment of the old DOS operating system. I made and worked from xerographically enlarged “galleys” of each column copied from the first (1981) edition that was printed in 8-point type. Unfortunately, the electronic files for that first word-processed revision do not survive. To that revision I began adding the accumulated additions, made emendations, and continued from there.

The revised, second edition of the bibliography was published by the Grand Canyon Natural History Association in 1990 (Monograph 8). Introductions for each part were written either by me or were solicited by me from other authors. The revised edition was produced by GCNHA in loose-leaf format, with a designed binder and printed separator tabs for each part. Thin paper and punch holes held a giddy promise of growth and convenience. Every part of the bibliography was paginated separately, with the intention to produce supplements, each of which would continue the pagination of the part. And the color of the pictorial binder was another unexpected one for me—“metallic mauve”!

Following on the loose-leaf idea, Supplement 1 to Monograph 8 was published by GCNHA in 1993; the idea being that users could interleave the various updated parts into the appropriate parts of their copies of the 1990 production. Unfortunately, now the binder was filled. (See Appendix B to Part 1 for collated pagination sequence and tab placements for 1990 edition and Supplement 1.)

74 See Appendix B to Part 1 herein.
A thousand copies each of the 1990 release and the 1993 supplement were distributed, along with 25 sets each on microfiche and as plain-text (ASCII) files on DOS-formatted 5¼-inch computer diskettes. They were judicious acknowledgments to the varied needs of different kinds of users, but particularly libraries. It continued the tradition of hard-copy productions through the expense-saving utility of updatable loose-leaf. They followed what then was a euphoria for space-saving microforms, and held wary hope for the utility of portable, searchable digital media. Unexpected was that the medium of microforms was a tolerated necessity that would fall soon to digitization, and that while the digital ASCII format of the diskettes may have been popular to the new digital librarians it was not a pleasant venue for actual users.

In the late 1990s, I completely revised the bibliography again, re-edited now with 34 subject headings, partly as the result of considered revisions as well as in response to suggestions made by others. During preparation of this third edition, the medium in which the revision would be distributed had not been decided. I anticipated (and encouraged) a CD-ROM product, which continued my implicit trust in text-searchable media that functioned as if they were a static, hard-copy volume. I stood proudly with feet standing in old and new centuries’ technologies. But the Association’s editors had the foresight and fiduciary reason to produce it in a format that could be continuously updated through its relatively new Internet website.

The revisions for the “Internet Edition” were completed in September 1999 and sent to the Grand Canyon Association’s web developer. The bibliography was posted on the website in January 2000. (See Appendix C to Part 1 herein for contents and arrangement of the Internet Edition.) Since then it has been frequently updated. By April 2006, 10,000 new citations had been added online, growing the bibliography by nearly 45 percent since January 2000. By the end of 2010, 21,000 new citations had been added, expanding the bibliography to 95 percent of its beginning size online. Tremendous spurts of growth during 2009–2010 were largely the result of fortuitous access to greater resources, not so much from either an inspired period of new publications or greater inspiration on my part. In 2011 it surpassed 100 percent growth since 2000.

As I have noted, the bibliography is, for reasons I elaborate on farther below, not maintained in a database format. This makes updating the online bibliography—which is a database format—a little more cumbersome. But bear in mind that I am maintaining a format that can survive unanticipated website blackouts and preserve the presentation of citations in aesthetically pleasing, traditional, readable and browsable bibliographical format, not a field-splintered agglomeration of text strings.
The following paragraphs may not make much technological sense in a hundred years—within a couple of decades, more probably—but they nonetheless document how this bibliography is built up for use *circa* 2010.

Updates to the online bibliography are prepared when new or emended citations are entered into the grand canon. A duplicate of the citation is made and pasted into a separate, temporary “additions” file. In that file I take the citations as formed from page or “flat-file” format and, using a macro that I have devised for the purpose in the word-processing environment, break down each citation into the category fields that are uploaded to the online bibliography (author, date, citation text, item number, and category). HTML delimiters, mostly in the markup of italic strings. In 2005, XML markup for all fields and files was implemented to enable batch uploading of citations (about which see more below), although editing of items already on line continued to use HTML.

Until the late 1990s, I continued to use only WordPerfect 5.1 for DOS to compose the bibliography and the updates. After a number of years it seemed that the functionality of WP5.1 was compromised by the very large file size. I migrated the principal documents to Microsoft Office Word for Windows, in which environment these documents still are composed. However, for a while I continued to use WP5.1 to manipulate the “additions” files as each was created for an upload to the online bibliography. This was because the use of macros (automatic functions created by the user) was rather cumbersome in Word for Windows, being an entirely different software environment from the “serial command” approach used by WP5.1 and other DOS-based programs. The macros in WP5.1 were convenient, powerful, and (most importantly) familiar. With earlier versions of Word for Windows, files could be both opened from and saved to the WP5.1-for-DOS environment; but beginning with Word 2007 the “save to” WordPerfect functions were removed from Word for Windows. For a while I continued to use the older computer, which had Word98 on board that enabled me to continue to switch to and use files in Word Perfect.

In January 2009 I finally migrated away entirely from the WordPerfect-5.1-for-DOS environment. A new computer and software upgrades gave me the opportunity to construct easier-to-use macros in the Word for Windows environment, which now allow me to rearrange citations in the “additions” file and insert XML commands directly into individual records. The “additions” file then is saved in MS-DOS text-only format and the file name is changed to include the .xml extension. After testing the XML file, it is ready to be uploaded to the online bibliography.
Logging in to the Grand Canyon bibliography website with an administrative password, I have the ability to add, edit, and delete citations. Each deletion or edit is done on a record-by-record basis as needed. Prior to 2005, each addition to the bibliography online was also done one record at a time. I clipped passages from each citation in the additions file into the appropriate field in the additions form in the online bibliography; a set of additions took hours to complete. In 2005, Grand Canyon Association authorized their contracted software developer to devise a batch-upload process, by which I can upload prepared XML-formatted citations as a single file and process, as shown in the brief example shown on the next page.

I test the correctness of the entire XML structure by clicking on the file’s .xml icon, parsing the XML coding and alerting me to format errors. Once the file is parsed successfully I log in to the bibliography website and use an “import xml” function designed by the developer. I can review the additions for correctness one last time onscreen before committing the job to the bibliography. Now an upload process takes just a minute or two rather than hours.

Had I started this project today, I might have just constructed a database rather than maintain an ever-larger “flat file” in a word-processing environment. The database format would be more resilient, and more useful to the inquirer. But I would not have been as happy with the formats with which answers to queries could be presented. In THE GRAND CANON I maintain a traditional layout and presentation of bibliographical citations, which standard databases do not achieve, if for no other reason than the alternating use of italic and Roman fonts within a citation, which convey important bibliographical information, is not possible within a single field of a standard database (like Microsoft Office Access). True, there are numerous bibliographical citation programs that are available, but these are proprietary software products that see relatively limited use, with the greatest danger being that data are not likely to be migrated to newer media as a matter of routine when the older software and/or hardware products are no longer sold or supported. When users are forced to move to (and purchase) more modern, compatible products, administrative factors dictate policy; it is an administrative concern when finances are called to the fore. There is also some danger in using a proprietary program that which, discovered too late, cannot be migrated into another, newer program from another provider. And further, far fewer computer users actually use, or have access to, database programs; most users have access to widely used word processing programs (Microsoft Office
Four sequential citations taken from an actual upload, prepared for conversion using XML tags and HTML entity numbers

Below, hyperlinks are embedded in each Item Number (<citationNum>) to allow the user to see the actual citation as it is listed in the bibliography

Word for Windows, for example) or unadvisedly use cell-based accounting programs (like Microsoft Office Excel) to handle textual material.

Were I to have transferred this monographic bibliography to a database format, it is just inconsistent enough in minor ways that to retrofit the citations from this document to a database directly from this file would be time-consuming and tedious. It may have to rely further on unsatisfactory stylistic contrivances to accommodate it
to the technology, as well as giving in to concessions for some citational conventions and forms of data presentation that cannot be replicated in the database environment.

So, even though I had experimented with a transfer, and discovered its unsatisfactory aspects, I now avoid the prospect and favor continuing to maintain the file as a word-processed document; what used to be called a “flat file” format. In further defense of this format, it does in fact maintain the traditional and eminently browsable style of many bibliographies. And it may be printed out in this format without undue reformatting, or, in purely digital form, recreated as a portable and searchable file in PDF (Portable Document Format). Regretfully, I do not have the time to devote to maintaining an idealistic double set of citations; one in an eminently queryable database format, the other in the traditionally readable word-processed layout.

The greatest disadvantage of the online bibliography, the Internet Edition, is, in my mind anyway, the complete lack of perspective of the whole. True, an item count is presented on the webpage, but it does not convey an image of the complexity and thousands of nuances that are perceived when one pages through a traditional bibliography on paper. Not seeing hundreds of citations in juxtaposition, immediately, is a shortcoming that has not been restored in the modern age; an age that has disposed of card catalogues and routine compilations of indexes. This age has, however, enforced some ecological sense by nearly ending the publication of hundreds of ponderously un-readable copies of a single bibliography (multiplied many times over by other titles). Hardly fireside reading except perhaps to the most peculiar of researchers and advocates, this kind of bibliography is among the last of its kind.

I do nonetheless fret of the intellectual disaster that may come if, for any reason, the electronic resources of the world are switched off by natural or human catastrophe. So in the meantime, I hope that as a matter of preservation some printed copies will have been produced of the this digital version of *THE GRAND CANON*, a special venue that elsewhere I have called “light gray literature”.75 In the end, that may be only

---

75 Earle E. Spamer, “What a Woven Web: Archives, Websites, and the Coming Legacy of ‘Light Gray Literature’”, *Provenance*, Vol. 20 (2002) [2004], pp. 59-71. Specifically, “light gray literature” comprises materials retrieved from online resources either in digital format or printed to paper, whether they represent the online resource in whole or in part. The medium is inconsequential; rather, the genre embodies a combination of the intentions of the document’s creators in posting the materials online, and the intentions of those who retrieve saved copies of that material in whole or in part. At the time of their acquisition (for whatever reason) these materials may be a researcher’s “fair use” reference copies, which clearly are available elsewhere. But in the future, this same material in one collection may then represent the sole surviving relics, in whole or in part, of digital material that is no longer extant. The challenge to an archivist of that day will be to
an unnecessary act of desperation; but in the pursuits of the evidentiary documentation of the work of individuals, institutions and agencies, well worth the attempt.

“The Wreck at Disaster Falls”

A metaphorical expression of the loss of our global electronic resources.

ascertain whether it is material that is still accessible elsewhere, presumably in a copyright-protected venue, or whether it is then a unique or exceedingly scarce resource worthy of retention with restrictions if copyright provisions are still in force. Eventually, all such material will fall into the public domain, which is reason enough to safeguard it should it be the only record of a work by an individual, institution, or agency. This is, after all, a loss through technological decay or mishap, unintended by the creator of such work.
Computers and the Web on the Colorado River

In 1923, radio was an experimental novelty on a Colorado River trip through Grand Canyon. U.S. Geological Survey damsite surveyors kept in touch with the outside world, even learning of the death of President Warren G. Harding while in Marble Canyon, hence the naming of President Harding Rapid. Some six decades later, after personal computers were developed, it was reasonable to expect that they, too, would be useful tools even at the bottom of the Grand Canyon, despite some early technological limitations. By the turn to the 21st century, satellite communications made even routine web “chats” possible during river trips; and more computers were available that could withstand punishing treatment.

This photo taken on the evening of 30 May 1994 shows Alan Haden of the Glen Canyon Environmental Studies project sitting aboard his boat with a laptop computer, collating data gathered during the day’s work. Surely this was among the earliest computers ever to be used on the Colorado River in Grand Canyon. This science trip collected data during a controlled steady flow of water from Glen Canyon Dam. The study investigated “photosynthetically available radiation”, the amount of sunlight that reaches specific depths, and how the dam-controlled regime of the river may affect the production of plant food resources for Colorado River organisms.

Thus far the earliest published items cited in *THE GRAND CANON* are from 1548; one is dated, the second is attributed to that year. Both are within a decade of the beginning of European excursions into the Colorado River region. There are, of course, many manuscript materials that embrace this region, some of which are cataloged into online library resources; but these are beyond the scope of the published record in *THE GRAND CANON*, the availability of numerous, identical copies. The history of the American Southwest is rich, exhaustively studied, rife with political contention and cultural ambivalence, and far more involved than can be mentioned further here. Native Americans had lived and journeyed in the Southwest for centuries earlier, of course, but it is the publishing tradition of Europe that begins documenting the corroborative, citable, and obtainable records of exploration and work done in this region.

Two first-person reports relating to the Colorado River and the Grand Canyon are known to originate in events of 1539 and 1540, respectively. The seminal event was with Francisco de Ulloa (died 1540), the navigator who with ships of the fleet of Hernán Cortés (1485–1547) reached in 1539 the mouth of the Colorado River at the head of the Gulf of California. His report appeared publicly two decades later in Venice, in 1556, translated into Italian in Volume 3 of Giavanni Battista Ramusio’s *Della Navigationi et Viaggi*. Its first English translation, by Richard Hakluyt, was published in 1600. The original Spanish text is missing.

Europeans’ arrival at the Grand Canyon came a year after the Colorado River was encountered. During 1539–1542 an incursionary army led by Francisco Vázquez de Coronado (1510–1554) infiltrated the American Indian lands on the frontier of New

---

76 Item no. 2.6438.
77 Item no. 2.3117.
Spain in what today is Arizona and New Mexico. As is well recorded historically, they had set out from today’s Mexico to rifle the Indian pueblos of their riches, which as the Spanish learned soon enough was only the stuff of mis- and disinformation.

In 1540, an expeditionary party under Pedro de Tovar traveled from the main army to the Hopi mesas in today’s Arizona. There they learned about a large river farther to the west, which was of interest to them as a means to connect with the Gulf of California; the original plans of the expedition included resupply of the armed force by ship on the lower Colorado River, although that never happened. Tovar reported this news and another party, about thirteen men under García López de Cárdenas, was dispatched. Journeying 20 days from the Hopi mesas, their Hopi guides led them to the rim of the Grand Canyon at a point described cursorily (in an account drawn up decades later) as a place where the Colorado River was visible and where low pines grew. This area is believed by many historians to have been at the eastern end of the canyon at or near the area now called Desert View. Others consider it may have been farther west, closer to where, in the early 20th century, William Wallace Bass conducted tourists into the canyon on his mining trails; the Spanish

فترícula "Tower and Giralda of Seville."

This view depicts the Tower of Seville, the earliest size-comparison to features seen in the Grand Canyon. This illustration was made some two centuries after the first Spanish visit to the canyon, when it was taller than the incursionists of 1540 would have known it, now with the addition of a bell tower. The scale at bottom is 50 Castilian feet; one Castilian foot equals 0.28 meter, or about 11 inches.

John Talbot Dillon, Travels through Spain, With a View To Illustrate the Natural History and Physical Geography of That Kingdom, in a Series of Letters (Printed for G. Robinson, London, and for Pearson and Rollason, Birmingham, 1780), Plate VI.

(Academy of Natural Sciences of Philadelphia)
party would have been led along Native Americans’ routes to reach this area. Grossly underestimating distances in the canyon, Capt. Pablo de Melgosa, Juan Galeros, and a third man whose name is not remembered futilely tried to descend to the river; they did not even make it half-way and they swore that rocks down there were in fact taller than the Tower of Seville (see previous page), a landmark familiar to them back home, adjacent to the cathedral of Seville. Without further record of the canyon that now survives, the party returned to the main force. Not until 1563 probably was an account of the events from 1539–1542 written down in the manuscript “Relación de la Jornada de Cíbola” by Pedro de Castañeda de Nagera (a surviving copy was made in Seville in 1596). In turn the Relacion was not published for nearly two and a half centuries, when in 1838 Henri Ternaux-Compans translated it into French. An English translation did not appear until fully three centuries after the surviving copy was made, when in 1896 George Parker Winship published the Relacion for the first time in both Spanish and English. After the Cárdenas party left the Grand Canyon no European is known to have gone there for more than two centuries. In 1776 the Franciscan friar Francisco Tomás Garcés (1738–1781) journeyed to the lands of the Hualapai and Havasupai people; he, fortunately, wrote his own record.

The earliest publication date cited in THE GRAND CANON is currently a 1548 Italian edition of Ptolemy’s Geography. As historians have noticed, this is the first such geography to include results obtained during the Spanish expeditions of less than a decade earlier. A map drawn in 1540 by Sebastian Münster was published several years afterward, undated but attributed to the printer Henricus Petri in Basle, 1548. The map depicts Die Nüw Welt [The New World], the west coast of North America being

---

78 The tower, La Giralda, still stands as part of the cathedral of Seville, Spain. Originally commissioned in 1184 as a mosque, it was completed in 1198. In Castañeda’s day the tower was some three and a half centuries old but still lacked the upper portion of the present structure. A modest belfry was installed after its original ornamental top was felled in an earthquake in 1356. The present belfry, as well as the upper tower and the statue, “Faith”, were installed in 1558, eighteen years after Coronado’s men attempted to reach the bottom of the Grand Canyon. The present structure is 93 meters (305 feet) tall.

79 Item no. 2.1909. A 1596 manuscript transcription of a lost ca. 1563 original; in the Obadiah Rich Collection of the New York Public Library.

80 Item no. 2.6265.

81 Item no. 2.6973. See also the frontispiece to Part 1 of this bibliography.

82 Item no. 2.2132, a 19th-century edited translation by Elliott Coues.

83 Item no. 25.80. The Geography, or Geographia, of Ptolemy is the geographical work, ca. 150 C.E., by Klaúdios Ptolemaĩos (Κλαύδιος Πτολεμαῖος) of the 2nd century. It survives from manuscript copies dating to at least the 10th century and was all the rage of scholarly Renaissance Europe, when the author was known in Latin translation as Claudius Ptolemaeus. The Byzantine monk Maximus Planudes was the first, after 1295, to create maps based on a copy of Ptolemy’s rewritten text.

84 Item no. 25.247.
stylistic and salted with islands the largest of which, some distance from the coast, is labeled “Zepangri”, which refers to a people reported by Marco Polo in Asia. A river in the Mexican west coast, about at the latitude where would be the Colorado River, is probably stylistic as well. The map is interesting in that it depicts generally-perceived navigational trends and landfalls as they were communicated at the time when longitude was poorly determined and when the Spanish were just beginning their exploits of conquest in what today is the southwestern United States and northwestern Mexico.

A map of the Gulf of California was drawn in 1541 by Domingo del Castillo, a pilot in the second expedition that sailed to the mouth of the Colorado River in 1540. According to “The Kohl Collection of Maps Relating to America in the Harvard University Library” (as published by Justin Winsor, 1886, who indicated the map was one of California),\(^85\) it was found among papers of the descendants of Cortés. Copied and engraved in 1769, it was published in 1770 by Francisco Antonio Lorenzana in Historia de Nueva-España (see detail below).\(^86\) Castillo’s is the earliest authentic delineation of the Gulf of California and the Colorado River delta region. There are earlier 16th-century maps of the Pacific coast of North America, of course, but none even fully resolve the gulf.

---

\(^85\) Item no. 1.260.

\(^86\) Item no. 2.14602.

Detail from the 1541 map of the Gulf of California by Domingo del Castillo, as copied from the Cortés family papers and published in 1770 by Francisco Antonio Lorenzana. It is the first map to include the mouth of the Colorado River from original surveys. The map thus is also the earliest known illustration of any area covered in THE GRAND CANON. Also note the imaginative depiction of “La Cuidad de Cibora” (upper right) that relates to the Seven Cities of Cibola.
A few users of THE GRAND CANON may point to Chinese accounts that putatively record an even earlier visit to the Grand Canyon, reached from the West in the 15th century, but such interpretive claims have not held up to historical corroboration by scholars of either the American Southwest or the oriental Far East. Some users argue that carved and painted Native American rock art throughout the region establish a far earlier and expansive written record. While this is true, we frankly are at a loss as to how to incorporate such individual materials into a bibliography—which as technically “manuscripts” would for that reason anyway exclude them from THE GRAND CANON. In any case, the 16th-century dates noted here are known with certainty. They establish the beginning of a publication history, based on known documents, with which historians and aficionados of the Grand Canyon and the Colorado River are familiar.

---

In some academic pursuits, centuries of pertinent research material, rather than years, are the norm. In these engagements, consulting works that have been published two or three centuries apart is as expected and productive as picking up current issues of journals. Throughout THE GRAND CANON one will see mostly publication dates in the 1900s, which reflects not their relative importance but the tremendous increase in the number of books and periodicals published during the 20th century, as well as representing the work of a hugely increased population of researchers and writers.

Citations from the 1800s are now a century or two old; sometimes this is a startling realization when it seems that (for some of us) the 1960s were not “so long ago” but are a half century and counting. Often I marvel that the material with which I work has survived, occasionally without much intervening use, for two or three centuries. One may dismiss this thought as casual and without significance, until one projects the same idea into the future. Imagine a book or paper published in 2000 being found and used by a researcher two and a half centuries later, in 2250. Where one today may speak easily of 1750 (the equivalent of Colonial times in American history), speaking instead of 2250 seems to us far more separate from the perspective of 2000; but probably in 2250 the view back to 2000 will be made as nonchalantly as we today view the temporal separation of 1750 from 2000. To expect a publication to last until 2250 may be speculative, but that is due to our long-sighted vision of the future. And yet, academic libraries and great public collections like the Library of Congress are full of works from the 1700s; we accede that it is a normal thing.

---

87 See for example items by Jack Anderson, Hendon Mason Harris, Alexander M’Allan, and Henriette Mertz, all cited in Part 2 of the bibliography.
Imagine then the researchers of 2250 looking back to holdings of the 1900s--2000s, and the anticipation that they may hold when contemplating working with these “old” collections, inherently valuable to their work. Lest one think that the example is not too dramatic, change the perspective to that of the earliest cited publication in *The Grand Canon*, 1548, or 452 years earlier than 2000. Looking ahead the same number of years brings one to 2452. Where *The Grand Canon* now cites just two items from 1548, a user in 2452 looking backward 452 years will find more than a thousand items from 2000 alone; and an astonishing 904 years will then separate that modern day from the items of 1548. Eventually the 25th century will come, a time when, surely, the conduct of research will be much different than it is now. We may wonder how so.

*The Grand Canon* is the documentation for everything published (that is, as much as has been found) that in some way relates to the Grand Canyon and the lower Colorado River. Material as early as 1548 has been found, less than a decade after the first European visitations in this region—and consider further that 2048 will mark 500 years on, “just” 508 years since European venturers first reached the Grand Canyon. So, while *The Grand Canon* has been created principally for the immediate uses of researchers and administrators today, it serves also as a time capsule for future researchers, whether in a generation or centuries. The very fact that these citations record everything of distantly past publications as well as the products of very recent publications—from my viewpoint a generous mix of antique and contemporary—will someday all be golden treasure to those who wish to search among “old” references from the 20th and early 21st centuries. A compilation such as this one never goes out of date; only less current and intrinsically, cumulatively more historical. As time passes, current events and cutting-edge research become documentary evidence for works of re-study and re-evaluation.

I am presumptuous in thinking that *The Grand Canon* in particular will survive and be somehow available two centuries from now; it is, after all, only in digital format, thus with an uncertain longevity. Yet I rather hope, or expect, it to survive because today I expect to be able to find publications from two centuries ago—testified by the accompanying illustrations here and the fact that in my profession I am surrounded by such things. The safeguarding of digital materials for future uses is still a novel thing, but one which we may be certain can be made to follow the technological march of civilization, in particular the administrative requirements and personal demands of nations and citizens. Whether this will be accomplished remains to be seen. In the meantime, today I know that the resources I seek survive somewhere, and because of their relative ages I understand that in addition to their value as contemporary records they have accrued new research values since the times
they were created. It should not be strange after all to look ahead two, three centuries or more holding the same expectations for resources that we hold when looking backwards from today, regardless of whether it is paper or petabytes.

One may argue that the resource pool of the future is not our concern, not worth our while to expend effort and funds in providing for it in the face of pressing and pragmatic concerns of the present day. Our immediacy engages us absolutely. We strive constantly to justify our work and time to those who oversee it, whether it be our employer or a watchful tax-paying constituency; and justifying our actions calls for documentation. We are not so pressured to justify ourselves to future generations—despite the worthy intentions of groups who, for example, engage public, industry and government to responsibly safeguard our natural, cultural, and aesthetic resources for the future generations.

On the other hand, one may take into consideration the routine jottings of personal travelogues by individuals who are answerable to no one in particular. Through publication or other public dissemination (such as in website postings or on-demand publication) these works become documentation of their authors’ presence, activities and opinions. No employer, no constituency, was there to evaluate them and validate their work; but theirs are nonetheless points of current events and they become, by dint of survival, part the future’s pool of resources.

A master compilation that registers all of these kinds of justifying documents—like THE GRAND CANON—thus provides for documentary survival. It does not preserve the published items themselves (which hopefully will be retained as geographically separated, multiple copies) but, by recording their presence to begin with, notice is drawn to them. Without the register future researchers may be blind-sided, never knowing of some materials that may be pertinent to their work, whether avocational, academic or administrative.

So, for the history, culture and science of the Grand Canyon–Colorado River region, THE GRAND CANON’s monumental, conventional, and arcane references alike—the treasures and trash—not only look to the past to assist today’s researchers and administrators in their work, they wait with comprehensiveness for those who will be working a long time from now. In providing a service for those who need it today THE GRAND CANON also becomes a historical resource for those of the future. And in that distant time new administrative benefits will be derived from it, by those who seek to justify or document whatever current work they have at hand. ♦♦

John Wesley Powell, *Exploration of the Colorado River of the West and Its Tributaries* (Washington, Government Printing Office, 1875), Figure 74.
ACH CITATION in THE GRAND CANON is a receptacle for at least one fact regarding some aspect of the Grand Canyon or the lower Colorado River—even in works of fiction because the “facts” are the characters and scenarios of creative work. In sum the citations are a whole image of human experiences, activities and uses; elements of the natural world; and spiritual, emotional, analytical and critical responses through the activities of professions, avocations and livelihoods in this part of the world.

Throughout this chapter references are made to the two concomitant editions of this bibliography: THE GRAND CANON, which is the present document, and the Internet Edition, which is the searchable database version of this bibliography online at www.grandcanyonbiblio.org. The content of the two editions are virtually identical. THE GRAND CANON in its monographic presentation is continuously updated by the author, from which citations are continuously uploaded to the Internet Edition. However, the distribution of THE GRAND CANON in PDF (Portable Document Format) occurs only occasionally; each edition will completely supersede older ones. Thus the online Internet Edition, so long as it remains available and updated, will usually be somewhat more current than individual editions of THE GRAND CANON. Many added features in THE GRAND CANON, as noted elsewhere, are not present either in the Internet Edition nor to any of the predecessor bibliographies out of which these editions have grown. And further, there are numerous (even innumerable) very minor adjustments in format and presentation, and points that are of interest only to a very exacting few, that are shown in THE GRAND CANON that are not present in the Internet Edition. Similarly, numerous worthy titles of nearby regions are excluded if they do not take note of the canyon or its river.
The sections that follow are intentionally detailed, serving as a documentary record, anticipating the time when I am not present to answer questions about it.

**Topical Coverage**

A bibliography includes whatever its compilers wish to include. Francis Farquhar's 1953 gem, *The Books of the Colorado River and the Grand Canyon: A Selective Bibliography* is celebrated by bibliophiles of the Southwest. But there really is no such thing as a “selective bibliography”, only an incomplete one (even when not purposely so); there is always something more to add or to elaborate upon. And indeed, such a work can be criticized as “a poor excuse for selecting other scholars out.”

---

 Nonetheless, one should bear in mind the geographical realm of coverage (see the next section); this is not a bibliography of all works by an author. Thus, some users may decry that one important work or another by an author is not listed herein. But a work is included here only if it embraces, even in part, the Grand Canyon or lower Colorado River region. If it does not, it is omitted, regardless of the prominence of the author or the worth of the work left out.

 This bibliography began in 1974 as a short list on the subject of Grand Canyon geology; it grew to be the present product. My decision to exclude the upper Colorado River basin is based entirely on my personal preferences, which are directed in turn by the limits of my experience. I know far less of the Upper Basin; moreover, I have not traveled much there. On the other hand, I have traveled quite a bit in Arizona and the Grand Canyon region of the Southwest. My seventeen trips on the Colorado River through Grand Canyon, between 1989 and 2001 (all but two through to Lake Mead), pale against the tallies of those who are boatmen on the river, but at least now I am comfortable with recollections and references to specific places in the river corridor.

 Within the region that THE GRAND CANON does focus upon, the topical coverage is nearly without bounds. Books, articles, and other items wholly about these subjects, and those merely of passing interest, all make their ways into this bibliography. The absolute criterion is that they must in some way make mention of the Grand Canyon or the lower Colorado River, in any context, however brief. This is partly a bibliography of subject-specific items, and partly an index.

 I have observed and practiced for years that one cannot presuppose what is “most useful” to the user of a reference work such as this. The product must at least strive for absolute completeness, which means scouring everything for whole and included information. This also means that everything is added without regard to an artificial evaluation of either scholarly or practical merit. I do not feel that it is the purpose of this bibliography to selectively omit anything, because it may prove to be of value—even for reasons unknown or unimagined—to someone in the future.

 The categories of this bibliography have evolved ever since work began on ever-more expanded versions of the bibliography around 1975. Similarly, the print editions of the bibliography, first in 1981, had employed arrangements of categories that differ from those of later editions, including THE GRAND CANON. [See the Appendix to Part 1 of the bibliography for a complete description of the arrangement of the previous bibliographies.] The selection of categories is partly routine (history, sciences, and so forth), and partly from the suggestions of others (human affairs, and health and safety, for example). My own predisposition to the earth sciences encouraged me to
subdivide the geological field guides and geologic maps from the general listings of the rest of the earth sciences, which, as learned from feedback from geological workers, has been useful. Although subdivisions of other categories—for example, “Biology” could be subdivided into, at minimum, zoology and botany—I have deemed further divisions impractical because of the number of items that would thus fit into more than one category, replicating and greatly inflating the number of citations in the overall work. Clearly that is the job for subject headings incorporated into a database format, which has never been the intention of THE GRAND CANON. In its present format here and online, the bibliography is not arranged according to a set of predisposed subject descriptors. I have in many instances used subjective and unique comments as a suffix to the bibliographical citation, which in such cases more competently explain the item’s content or pertinence than can be discerned solely from its title. The online bibliography is queryable. This word-processed version, THE GRAND CANON, is browsable, which testifies to the longevity I foresee in it. For this reason the categories exist, and a few citations (here and online, perhaps not more than a hundred or so) are replicated in two or more parts because they wholly embrace multiple subject areas, as indicated even by their titles.

Some users may notice the absence of some publications among these citations. These omissions are not exclusions. Occasionally, there is a title that a user may think belongs here for good reason that it may relate to a nearby region or event. However, if it does not touch upon either the Grand Canyon, its immediately adjacent lands, or the corridor of the lower Colorado River, it will not be included herein—even if the item appears in a periodical or book that is devoted to the canyon or the river. Still, the extent of bibliographical explorations by me and contributors go only so far. If something is not cited herein, and it clearly should be, we had not seen it; we have not chosen to omit it. Users who know of more things that should be listed here have the advantage over us.

Following are some of the subject areas of the bibliography that require some further explanations regarding their content beyond the descriptions provided at the head of each part and in the Content Guide.

**General Publications**

PART 2 is by far the largest part of this work. It includes everything that is not categorized by other parts of the bibliography; most notably,

---

89 The distinction between “geological” and “geologic” depends upon whether the science of geology is the subject (geological) or whether the data of geology (geologic) is the subject; similarly for other adjectives of this kind.
everything that is classified as history or biography. It embraces popular and scholarly productions.

A great many publications include both the Grand Canyon and the lower Colorado River, in such ways that it is pragmatically unreasonable to segregate the works that focus on Grand Canyon versus those that focus on the lower Colorado River. And once this consolidation has taken place, it is just as unreasonable to exclude from the General part of the bibliography those works that are exclusively about the lower Colorado River with no substantive mention of the Grand Canyon. The “General Publications” part further includes most of those items that, in previous bibliographies, had been heaped into a “Miscellaneous” part that was not a very helpful category.

Also, there are so many works that are multidisciplinary, which are not convenient (when focusing on everything within geographical bounds) to segregate into one subject. These must be cited within all pertinent parts of the bibliography; but their numbers are relatively few. Were this bibliography rearranged into a database format, artificial subdivisions could be employed to allow for more precise (though contrived) subject sorting; but as I have explained elsewhere herein, THE GRAND CANON is purposely in monographic format for now.

Aids for Those Who are Vision-Impaired ✶ PART 5 contains citations mostly for items that are in large-print or Braille formats and audio materials made expressly by agencies who produce materials for the vision-impaired. Other, unusual formats are included, too; for example, tactile material in Moon Type. Many citations have been derived from Library of Congress catalogue records, and of course this part of the bibliography should not be construed to be comprehensive.

Lower Colorado River Special Interest Subjects ✶ PART 11 (Lower Colorado River—Natural History, Environment and Special Issues) and PART 12 (Lower Colorado River—Water Management) are purposely separated from the Grand Canyon focus of this bibliography to facilitate a more sensible breakdown for those users who may be interested specifically in either the Grand Canyon area or the lower Colorado River.

As indicated in the title for Part 11, this part embraces mostly scientifically-oriented material. This consolidation thus means that, for example, geology, biology, and even ethnology items will be in the same part. It may seem more prudent to have separated out these disparate themes into separate subsections similar to the breakdown for THE GRAND CANON at large. However, I considered that approach to be counterproductive, the focus of these two parts being strictly on the lower Colorado
River corridor, below Grand Canyon to the Colorado River delta; otherwise there might have been a dozen short sections that would seem to inflate the breadth of this bibliography, with unnecessary overlaps by placing some citations in more than one subsection. For similar reasons, in the 1990 edition and its 1993 supplement I had incorporated “special sections” within some of the parts of the bibliography. This soon became inconvenient, the original objective being only to keep the number of loose-leaf separator tabs to a minimum. It seems that researchers interested solely on issues in the lower Colorado River may find a contiguous listing more advantageous, although this broad presumption is bound not to hold true for everyone. Still, a line must be drawn, and I have opted for the consolidated approach to the lower Colorado River. I have separated out only the water-management issues, which thematically makes sense.

Water—its abundance (or lack thereof), quality, and uses—is the crucial concern of the world’s people in the 21st century. In the American Southwest concerns will become as dire as any known in the civilized world; just as humanly devastating as the shortages in small villages of other continents but with far greater geographical and economic impacts. References in Part 12 of the bibliography will give some case examples of how we in the American Southwest got to that point imbalanced between climate, technology, and legislation—and our perspectives, however limited right now, on what to do.

The water-management citations in Part 12 of the bibliography, restricted to the lower Colorado River corridor and its artificial extensions such as through canalization and powerline construction, must by default embrace partly the Grand Canyon. This is mostly due to the proposed construction of dams in the Grand Canyon, which ideas began with power-production facilities proposed for the Colorado at Diamond Creek in the closing years of the 1800s and in the heart of the canyon at the mouth of Bright Angel Creek in the early 1900s. Similar proposals continued for the entire Southwest through the dam-survey period of the 1920s mostly, during which Hoover Dam was built in the 1930s, and which came famously to a head politically and civilly in the 1960s–1970s with proposals to build two power dams that would have bracketed Grand Canyon National Park (then geographically smaller). Since the Grand Canyon dams never were constructed, a conundrum presented itself in THE GRAND CANON as to where to cite water-management citations that pertained to proposed facilities that were still inside the Marble–Grand Canyon section of the Colorado River. Since these structures were a part of more ambitious plans covering the Southwest, I deemed it more sensible to include these citations in the water-management part of the bibliography for the lower Colorado River.
Regarding the water-management facilities of the lower Colorado River—principally Hoover Dam–Lake Mead, Davis Dam–Lake Mohave, Parker Dam–Lake Havasu, Imperial and Laguna Dams–Lake Martinez—most citations in THE GRAND CANON pertain to the dams and their appurtenant works as well as to administrative aspects of the lakes impounded by them. In the case of Hoover Dam and Lake Mead, a substantial number of citations relate to them; fewer for dams and lakes farther downstream. Appurtenant works include, for example, power-production facilities and specialized construction facilities during the building phases. Bridges in particular may seem to be indirectly related to the operations and oversight of the dams and lakes, but they, too, are here considered appurtenant works because, such as in the case of the O’Callaghan–Tillman Memorial Bridge on the Hoover Dam Bypass, completed in 2010, they were constructed to accentuate security and public safety at the primary facilities.

Aqueducts and irrigation canal works in the lower Colorado River region are also covered in this part of the bibliography. But no special attempt has been made to provide comprehensive coverage because this material of course carries farther and extralimitally to the lower Colorado River region, and where in those destinations there are sure to be a separate bibliography’s worth of published material.

Items pertaining to the plans for, construction of, and physical structure of Glen Canyon Dam, as well as items pertaining to Lake Powell impounded behind the dam, are not included in THE GRAND CANON. Exceptions are selected items that relate to effects downstream in the Colorado River as the result of physical alteration of the dam and its appurtenant works or from alterations to the operation of the dam.

Native American Tribes with Cultural Claims to the Grand Canyon  ❖  Part 17 of the bibliography relates to Native Americans of, and their relation with, the Grand Canyon. By default of residency at and in the canyon, the Havasupai and Hualapai people are the principal focus of this part of the bibliography. In addition, however, there are citations that relate in some fashion to the cultural relationships and claims that other tribes and nations have with the Grand Canyon. However, this part is not comprehensive due only to the fact that there are many citations that either have not been examined for content pertinent to THE GRAND CANON or have not come to my attention. This is not a bibliographical listing for the tribes in general; only their relationships with the canyon, although as noted the Havasupai and Hualapai have the preponderant number of citations because they are current residents of the canyon. Some topics that may seem to be out of scope, insofar as the tribal relationships with Grand Canyon are concerned, are nonetheless included here. For
example, some citations relate to Havasupai legal claims against Arizona State University, regarding the unsanctioned use by researchers of blood samples obtained from tribal members, specifically for research on diabetes in this community, which disproportionately affects many of these people. While this in itself may seem unrelated to the Grand Canyon, other research was conducted with the samples, without the permission or knowledge of those from whom the blood was taken, which arrived at scientific conclusions and social statements, which were published, that were decidedly at odds with the cultural beliefs of the Havasupai people and their relationship with the Grand Canyon. The resolution of these legal issues has provided some positive outcome for the individuals and the tribe.

Not all of the Native American tribes who exercise cultural claims to the Grand Canyon may have citations listed in *THE GRAND CANON*, except in a general or summary fashion; only the publications that have come to our attention are cited herein. For the reader’s information, the involved tribes are:

Havasupai Tribe, Havasupai Reservation (Arizona)
Hopi Tribe (Arizona)
Hualapai Indian Tribe, Hualapai Reservation (Arizona)
Kaibab Band of Paiute Indians, Kaibab Indian Reservation (Arizona)
Las Vegas Tribe of Paiute Indians, Las Vegas Indian Colony (Nevada)
Moapa Band of Paiute Indians, Moapa River Indian Reservation (Nevada)
Navajo Nation (Arizona, New Mexico & Utah)
Paiute Indian Tribe of Utah
    Cedar Band of Paiutes, Kanosh Band of Paiutes, Koosharem Band of Paiutes, Indian Peaks Band of Paiutes, and Shivwits Band of Paiutes
San Juan Southern Paiute Tribe (Arizona)
Yavapai-Apache Nation, Camp Verde Indian Reservation (Arizona)
Zuni Tribe, Zuni Reservation (New Mexico)

**GCES (Glen Canyon Environmental Studies)**  
PART 20 comprises a guide to reports and studies that were produced as part of the Glen Canyon Environmental Studies program under the U.S. Bureau of Reclamation; since ceased under that administrative entity. The program was implemented to study the effects of, and to contribute to administrative plans for, the operation of Glen Canyon Dam on the downstream environmental and cultural resources through Glen, Marble, and Grand Canyons. This part was compiled by Richard D. Quartaroli, then GCES Librarian, and incorporated in 2000 as a separate table in the online Grand Canyon–lower Colorado River bibliography. Since then, the entries have been reformatted and placed within
the searchable part of the online bibliography; but the original tabular layout as conceived by Quartaroli is retained in *THE GRAND CANON*.

**Geology**  
**Part 21** comprises references to the geology (broadly speaking) of the Grand Canyon region. It includes regional studies that embrace the Grand Canyon. Noticeable among these citations are those that pertain to areas outside of the geographical coverage of the main body of *THE GRAND CANON* (see map). These extralimital references contain discussions of the same stratigraphic units as which occur in the Grand Canyon; important for their focus on correlative stratigraphic and sedimentological analyses that, in turn, reflect upon studies in the Grand Canyon. This is akin to examining the meteorological or climatological aspects of the greater Southwest (as in Part 18) as they pertain to effects observed also in the Grand Canyon. Part 21 further includes broad studies of the geologic history of the Colorado River basin, inasmuch as these studies all pertain in some measure to the Grand Canyon and, in turn, the history of the river in the lower Colorado River region. Omitted from Part 21 are items that pertain to the San Francisco volcanic field. Although this area may be considered together with regional volcanism, such as that of the western Grand Canyon, I have considered the literature on the San Francisco Peaks too great for an area only of marginal interest to the Grand Canyon and Colorado River. Likewise omitted from Part 21 are discussions that may relate to the upper Paleozoic strata of Grand Canyon as occurring at Meteor Crater, east of Flagstaff, Arizona, since such discussions pertain to impact effects rather than stratigraphic or sedimentological relationships of those rock formations, which are in any case significantly and locally altered there.

Included in Part 21 are items that pertain to theoretical and practical computerized analyses of data that utilize the Grand Canyon topographic model. These are not mathematical modeling studies of the development or actual topography of the Grand Canyon but are landscape imaging studies. Because they use a Grand Canyon elevational data set to analyze the relationships of cells or sets of data points in two- and three-dimensional image representations, I include them within the geology subject area for their use of the topographical data set. But in as much as the cited publications do not usually pertain to studies of the actual Grand Canyon, nor are they products that pertain to the canyon, they are not considered for *THE GRAND CANON*’s separate section on Computer and Interactive Media.

**Audio-Visual Works and Audio Works and Musical Scores**  
**Part 26** (Audio-Visual Works) embraces products that employ the media of sight and sound, which include diverse products such as but not limited to films (silent and with sound), filmstrips,
stereoview sets, and over-the-air broadcasts that have been made available on videotape. Similarly, **Part 27** (Audio works and Musical Scores) limits itself to aural products and published musical scores. Citations within these sections have been encumbered by their un-booklike nature, by which even though there are some standardized means of citing them I have had to work around absent data for not having viewed many of them in their entireties. In these cases I have had to rely on data available on packaging materials, on product labels, and sometimes on external reviews or other notices.  

**Computer and Interactive Media**

**Part 29** embraces products that have been produced specifically for use on computers. While the definition of such products has blurred—for example, CD-ROM products including audio recordings can be construed to be “computer media”—the focus of this part of the bibliography is on graphical and interactive material; for example, map programs, interactive travel guides, older-style “screen savers”, and games.

While web-based media are omitted due to their ephemeral nature (see below), included here are announcements and similar items that pertain to digital personal-pad devices (“apps”, or applications, as they are known); this so as to make known bibliographically the existence of these products through the publications that were used to promote them. The “apps” themselves are not cited because, as like their web-posted counterparts, the ability to acquire these things in the future will diminish to zero.

---

90 I am compelled to take separate notice of what (to me anyway) is an interesting disparity in the kinds of musical productions that have been created in Grand Canyon venues, in contrast to the kinds of productions that have been presented in the written word. Traditionally, the Grand Canyon and the Colorado River have invoked grandeur and humility both; and there is no lack for sweeping, gushing invocations of the ultimate greatness represented by the canyon and its river, nor for the astonishing power that they have over human emotions. Some writings pause to kneel in quiet, thoughtful contemplation; but by and large most take in and redigest the “Grand”ness and “inexpressibility” of the canyon. Contrarily, there are no sweeping batons and crashing orchestral scores to match the writers’ slave galleys moved with enthusiastic prose and poem. There are Ferde Grofé’s individual pieces of his *Grand Canyon Suite* that focus on specific Grand Canyon impressions—the creeping splendors of “Sunrise” and “Sunset”, or the flashing and roiling storms that beset the view sometimes in “Cloudburst”, or the tone colors of “Painted Desert”—and of course there is his ever-amusing and widely recognizable clippity-clop of mules and their brawling cadences as they head “On the Trail” into the canyon. But otherwise the contemporary sound pieces for the Grand Canyon and Colorado River, some of them even recorded in canyon nooks, are solos or with small instrumental groups. These are compositions for woodwinds and strings, the music of dripping water and the thoughts of the wind, which cannot fuel the Olympian pyres of many of the canyon descriptions in the inkprint world. I am not aware of any critical, comparative studies of these differences between the styles of the written word and musical notes as expressed for the Grand Canyon and the Colorado River—which in turn is an example of one of the uses bibliographies serve, that of bringing attention to underexplored areas of study.
Web-posted Material ❖ As a rule, items that are posted to websites are not included in this compendium (see remarks on excluded web items). There are, however, numerous organizational newsletters and comparable documents that have been posted to Internet websites in formats that are facsimiles of or otherwise mimic printed-format layouts; judged by appearance and, sometimes, the inclusion of volume and issue numbering. These items are usually posted as PDF files. Many such items have been included in THE GRAND CANON because it is not generally possible to distinguish between those that are available only online and those that have been printed (or otherwise distributed in paper formats); some are copies produced for paper distribution that also have been converted to PDF and posted to a website. One certain way of identifying those that have been distributed in paper format are items that include space for a mailing label and return address. Webpage formats that clearly do not reproduce or do not mimic traditional printed-format layouts have been ignored; these include crudely composed items that rely on basic HTML layout and graphics use, clearly designed for web presentation, as well as those that have garish coloring or animation and other kinds of graphics that do not appear in printed works.

❖ Geographical Coverage

When we speak of ‘The Grand Canyon’ it must be understood that the Canyon does not start at the edge of the precipice. Nor is it an arbitrary line on a map, but rather it is the sum–total of the entire area surrounding those edges.

— Stephen Verkamp

The principal focus of THE GRAND CANON is the region of the Grand Canyon of Arizona, and the Colorado River from Glen Canyon Dam, Arizona, to the river delta in the Gulf of California, Mexico (see map on next page).

Here, the Grand Canyon region is taken to be the physiographic canyon and its surrounding landscape, approximately from a line north of the San Francisco Peaks northward about to the Utah border, and from the eastern end of the canyon (including the Little Colorado River gorge) westward to the Grand Wash Cliffs. The lower Colorado River is taken to be the physical river corridor from Glen Canyon Dam

Approximate geographical area covered in *The Grand Canon*, embracing the Grand Canyon and Lower Colorado River regions, Glen Canyon Dam to the Colorado River delta. (See herein the section Coverage and Format for notes about variance in geological coverage.)

Approximate division between “Grand Canyon” and “Lower Colorado River” thematic regions as portrayed by this bibliography (see Contents).

Base map of Colorado River drainage basin adapted from U.S. Bureau of Reclamation, Glen Canyon Dam Adaptive Management Group. The Upper and Lower Colorado River Basins delineate the apportionment of the waters of the Colorado River basin in the Colorado River Compact of 1922; divided just downstream from Lee’s Ferry, Arizona, at the confluence of the Paria River. Dams and impoundments are indicated on the map. Lighter-gray areas, not labelled, are American Indian reservations. Basin boundary is not depicted in Mexico.
to the delta, as well as the surrounding landscape beginning at the Grand Wash Cliffs and Lake Mead and continuing southward with the river to its delta.

These are arbitrary limits, ones adopted for compiling a bibliography. They are partly for the convenience of the compiler, reflecting the limits of his familiarity within a broad spectrum of subjects. Yet these limits also delineate amanageably-sized geographical region within which focus a panoply of tangible and intangible interactions that people experience and initiate. The people are affected by the natural conduct of nature; the physical and ecological world of lands, waters and air, and the animals and plants that inhabit them. The people, through ideas and actions both, influence individuals and their communities, creating what we broadly call “history”; and likewise affected are the physical and ecological landscapes and the inhabitants therein. The people here, indigenous and immigrant, experience and continue cultures that are inherited, adopted, and imposed, which instruct from ancient and historical pasts; and with these the people embark in activities with which they search for the ways and means of the future. Every action, every assertion, corresponds to another.

One may question the utility of embracing both the Grand Canyon and the extended lower Colorado River to the sea, a region whose parts are topographically, geologically, ecologically, culturally, and politically dissimilar. In fact, their human histories ever since prehistoric times and, in written records from the time since the Spanish incursions of the mid-1500s, have been increasingly, now inexorably, entwined. Their natural histories overlap in numerous ways, too; particularly the recent geological history, which, at least during the time while the lower Colorado River system developed, is indivisible even though it crosses between two distinctly different physiographical provinces of North America. Historically, one can investigate one part of the region easily enough without having to attend to things that partly pertain to other areas, but the complex interrelations reveal themselves as one focuses more broadly or when the region is viewed from multidisciplinary perspectives. To thematically separate the lower Colorado River from the Grand Canyon is easily enough done; the historical separation, though, is difficult; geologically, impossible. Similarly, separating Glen Canyon Dam from the desert Colorado River below Hoover Dam, or separating Hoover Dam from the Grand Canyon, belies the dramatic environmental influences each has had upon the other. And separating the Native American cultures of the Grand Canyon region from those of the lower Colorado River region, including the delta, diminishes the commonality of cultural affiliations and the impacts weighed upon them by Anglo activities everywhere in the region; likewise it mutes the common voice of these people's dependency upon the Colorado River and
the cultural heritages that arose and continue by understanding life in this land. All of these views formulated and directed the compilations of *THE GRAND CANON* itself.

The 17th and 18th centuries in this region recorded human interactions in a geographically far-flung but sparse field of publications, focused on the lower Colorado River. The 19th century saw the first sponsored explorers in three centuries to span the whole region, rediscovering the Grand Canyon. Later in the century came an inflow of entrepreneurs and scenic investigators, geologists and geographers, archaeologists and ethnographers, biologists and nascent ecologists, and a few permanent residents and curious travelers, the harbingers of throngs of tourists. The 20th century bore the infusion of greater populace, both permanent and transient, and all manner of specialized researchers, in the humanities and sciences mostly. Plans for, and partial implementation of, a regiment of dams in the Colorado River basin brought beneficial and damaging effects alike to culture, environment, law, and administrative practices—not to overlook variant effects on the quality of life in general, including tourism, the irrigation of farms, and the safeguards of air quality and silence to mention just a few aspects. Thus far in the 21st century focuses have generally shifted away from large-scale investigations to specialized projects and, in the areas of water-management, increased attention to concerns over the effects of drought and climate change.

I realize that the physiographical Lower Colorado River Basin, and by convention the political lower Colorado River, begins near the U.S. Geological Survey hydrologic gage at Mile 0.0 just downstream from the Lees Ferry boat ramp. However, in that Glen Canyon Dam serves as a barrier both to the river and to the coverage of *THE GRAND CANON*, and that the encanyoned river downstream from it is now amputated from the body of Glen Canyon, I bibliographically extend the lower Colorado up to the dam.

What is left of Glen Canyon between the dam and Lees Ferry is its history. Despite the definitions of administrative boundaries, it is effectively no more a part of Glen Canyon National Recreation Area than Lake Powell would be a part of Grand Canyon National Park. Lees Ferry as a geomorphological crossroads is tangibly linked to the history of the entire Southwest, one of the few places the Colorado could be crossed before bridges, a passage from the Little Colorado River towns to the Mormon country of Utah. But now Lees Ferry is only at the end of a road, straddling the Glen Canyon and Grand Canyon political units. Bridges upstream and downstream supplant the ford and ferry; the river is no longer through-flowing, stumped momentarily by Glen Canyon Dam. Today, Lees Ferry serves as the sole unobstructed
entrance to the bottom of Glen Canyon and, in the other direction, the starting point for one of the world’s most remarkable natural and historical whitewater routes, through Marble and Grand Canyons. The distinctions of history and geography have been muddled here, too. An ironic example of this was an error in a large brown informational highway sign I saw in 1997 on the eastbound side of U.S. Route 89A, west of Marble Canyon. Riding atop piles of river equipment in the back of a stake truck, I had no way of stopping to picture the sign as we sped past, yet its ironic significance weighed on me: it alerted travelers to the ambiguous “Grand Canyon National Recreation Area”. Of course, there is no such entity. Fortunately, the sighting was photographically proved before the sign was repaired, when it would have slipped into the annals of hearsay.

At the western end of the Grand Canyon, where the physiographic canyon is dramatically concluded by the Grand Wash Cliffs, Lake Mead slips in past the gateway up into the western part of the canyon, stealing the Colorado River’s historic identity there. In the 1940s it stilled some of the Colorado’s more famous rapids, like Lava Cliff Rapid and Separation Rapid. Lake Mead National Recreation Area fortunately does not also politically steal the lower Grand Canyon; its administrative boundary is pointedly if not necessarily permanently marked by a buoy in the river channel. The buoy likewise approximately delineates the two major portions of THE GRAND CANON, separating the coverage of the canyon-proper and its adjacent lands, and the region of the “lower Colorado River”.

Flowing with the river, a short way into the main body of Lake Mead west of the Grand Wash Cliffs is another historic river crossing, Pearce Ferry, also muted. This one is less a geomorphically constrained passage as like Lees Ferry, but substantially far more used in the 19th and early 20th centuries. Expeditions, trappers following the waters, and prospectors moving north or south within the promising ranges of the Basin and Range physiographic province crossed here; so too travelers dropping from the Old Spanish Trail, and Mormon colonists moving south from Utah to investigate and invigorate the commercial prospects of the lower Colorado. Everyone crossed here to avoid the Grand Canyon and the high, water-poor plateaus on either side of it.

92 One wonders whether the people who made or installed the sign noticed the error. It reminds me of an incident that took place in Philadelphia. A large, green directional sign was put up on Interstate 95, directing drivers to PHILA INTL AIRPROT. A passing newspaper reporter pointed out the misspelling to the men hoisting the sign, with interstate traffic blocked. They shrugged; their job was just to put it up. (It was taken down the next day.)

93 Item no. 2.2548.

94 See the noticeable blue line on the western side of the map of Grand Canyon’s physiographic rim, farther below.
The spot where the Lake Mead National Recreation Area’s “Pearce Ferry” is marked by official signs does not mark the historic ferry site, long since drowned and silted in beneath the surface of Lake Mead. When I first composed these paragraphs, I said that the recreation area’s “Pearce Ferry” slid tiredly into the warm waters of the lake. But the vagaries of climate and water-supply demands and allocations in the West caused the lake’s water elevation to drop during the opening years of the 21st century, ladling away the waters for which Hoover Dam was built in the first place. A decade after my comment the beach was dry, the lake bottom in Pearce Bay reclaimed already to a desert bushland. Here, the Colorado River runs out of sight of “Pearce Ferry”, running more aimlessly now through the silty lake bottom. In the process it created “Pearce Ferry Rapid”, a new, albeit temporary, rapid of the Colorado River; unrocky but requiring alertness and respect. Until the western waters upstream replenish the diminished Lake Mead, redrowning Pearce Bay and the river course in western Grand Canyon, the river continues to wend its way in search of its original channel.

And so the Colorado River through the Grand Canyon—as well as its history and science—is bracketed by two of the loneliest places in the country, places that only historians, river runners, and bibliographers could love.

Last, odd as it may seem, one may question how the Grand Canyon is defined; that is, where is the rim of the Grand Canyon? The location and extent of the physiographic Grand Canyon, or more precisely the edge of it, may seem to be an obvious definition for one who has stood on the edge and experienced the draw of the open abyss. Geomorphologically, the rim follows a tortuous course, tracing the topographic tendrils of every drainage, large and small and inconsequential, all of which converge upon the Colorado River. In some places more gently sloping areas may provide a more ambiguous location for the rim. But since there has never seemed to be a particular need to define the rim except in a few instances of describing land apportionments, the whole of the physiographic rim never was precisely located.

As part of extensive field mapping in the region conducted by George H. Billingsley of the U.S. Geological Survey, he plotted the approximate physiographic rim of Grand Canyon for a Survey map recreated digitally with Haydee M. Hampton and distributed in 1999 (see next page). While the interpretation of the rim is subjective in some parts, and is not in any case a legal definition of the rim, it provides a first look at the true figure of the physiographic canyon without respect to definitions of political geography.
"Physiographic rim of the Grand Canyon, Arizona".

The physiographic rim is interpreted along both sides of the canyon, from Lees Ferry (on the Northeast) to the Grand Wash Cliffs (on the West), embracing Marble Canyon (from Lees Ferry nearly to the Little Colorado River that enters from the Southeast) and Grand Canyon. The rim is plotted not along lines of equal elevation as like topographic contours but along what can be construed as the “edge” of the canyon. While the precise “edge” may be subjectively defined in some areas, this map nonetheless for the first time displays the true figure of the canyon without respect to definitions of political geography or to stylistic generalities due to imprecision. By convention, the two sides of the canyon, separated by the Colorado River, are called the North Rim and the South Rim. Note that the physiographic rim also runs along the rims of significant tributaries, the most prominent ones of which are Kanab Creek (on the North), the Little Colorado River (on the East), and Cataract/Havasu Creek (on the South).

On examining the map one may be struck by the beauty of its general symmetry. A closer look brings to attention the incredible number of convolutions seen even at the scale of the map; and most notably, the different shapes and crenulation styles of the rims, with Kanab Creek noticeably entering from the north and, opposite it, Havasu Creek entering from the south; and as well the Little Colorado River entering from the east. One may suppose that the two rims, measured along the very extenuated line marking the edges on the north and south sides, must be of very different lengths, especially when one takes note of the much more highly crenulated north side, a function of the geological lay of the land. However, the authors had not indicated the lengths of the two rims as drawn on the map. These subsequently were measured by Susan S. Priest (U.S. Geological Survey) using ArcInfo data points from Billingsley and Hampton’s data set. The north side measures 1,384 miles; the south side, despite the apparent great asymmetry, is astonishingly a nearly identical 1,373 miles.95

**Content Accuracy**

*The Grand Canon* restores the monographic presentation of its predecessor editions. Between 2000 and 2012 the definitive version was the Internet Edition, a web-posting only. Transferring data to a separate file, adding HTML- and XML-formatting commands, and uploading data to the Internet Edition may have inadvertently introduce errors and omissions—the compiler’s fault—or may have created duplications or result in omissions. *The Grand Canon* however includes features and minor edits that do not appear online, and in as much as it may include citations that somehow may have been omitted online, it is the “official” version that arbitrates issues relating to content and accuracy. Should the Internet Edition not be properly updated, if for any reason it should be corrupted, or if it ceases to be updated, the present document will continue to stand as the authoritative version.

From about 1988 until December 2003, the digital version of the bibliography was maintained in WordPerfect 5.1 for DOS; then it was converted to Microsoft Office Word for Windows. It continues to be maintained in the Word format and will continue so until circumstances dictate a migration to newer, compatible software. In December 2008 the files were migrated to Word 2007. No hardcopy printouts of the content of this bibliography have been made since January 2000. So far as is known, none of the conversions resulted in loss of data.

95 Data were first sent from Billingsley to Spamer in 2010. These figures were included in a publication by Spamer (see Item no. 2.14635.)
Errors and incomplete data contained herein are unknown to me as of the date shown in the Statistics page of this document. In the manner of a disclaimer, any of the digital versions of this bibliography may have been unknowingly corrupted at one time or another, due to software malfunctions that are beyond my abilities to know or to rectify. In rare instances where an operation “crashed”, sensible efforts were made to ascertain that when the document was restored it was wholly intact. I am not aware of data loss as the result of electronic mishap.

**Excluded Items**

Two principal resource areas are largely excluded in *THE GRAND CANON*, and to which two former parts of the bibliography have been removed.

*Newspaper articles* are largely omitted because there are articles in all major, and many minor, newspapers; far too many even for a team of compilers to locate and cite. Exceptions to this rule of exclusion are *The New York Times* and early issues of *Deseret News* (Salt Lake City), as well as selected opportunistic citations from other titles (about which see more in the following section on *Newspapers*).

*Internet resources* are omitted because, at this time, the resources cannot be guaranteed to survive indefinitely, in the manner of printed publications catalogued into libraries, although sometimes a search may retrieve a new web location for documents whose links have been changed. Internet resources can disappear without notice, either by a renaming of their URLs, by dismounting of the item or the entire webpage from the website, or through the switching off of the website altogether. Libraries of course can (and do), at their prerogative, remove printed works from convenient access or deaccession them altogether through sale or disposal. This is by individual cases, though, and there almost always remain copies held in other repositories. Also, the records are removed from the library catalogs, unlike the constellation of broken links that populate millions of unupdated pages on the web. The disappearance of a library volume is unlike that of web-mounted material that disappears utterly because there is, generally, but a unique “copy” of an item accessible to all via a hyperlink until it is moved or removed. It might be worthwhile sometime to compile a webography for the Grand Canyon based on a reliable and unambiguous restoration and perpetuation of old and current URLs, but this is beyond the scope of the present work.

Included among the web-based exclusions are digital-only books available only as downloads; for example books digitized for e-book readers such as the Amazon
Kindle or the Barnes and Noble Nook (there are many others, and the market is continually shifting). Perhaps a separate portion of an even more expanded bibliography would do well to cite such products. Perhaps it may be best to cite only those books that have been made available for e-book readers, with or without a list of formats.

Exceptions to the web-exclusion criterion are accorded to very specialized online serials devoted exclusively to the Grand Canyon. These are:

1) The *Canyon Sketches* series from Grand Canyon National Park. These separately authored informational bulletins focus principally on park-related activities and history, which may be downloaded or printed. I have maintained a separate collection to record these items; pertinent links are embedded into citations in this bibliography. As of March 2012, 24 “volumes”, or issues, had thus far been posted to the national park’s website.

2) *Grand Canyon River Guides*, an electronic newsletter from the Grand Canyon River Guides begun with the “2010 Winter Issue” (December 2010). (It ambiguously reintroduced the title of the organization’s original newsletter, *Grand Canyon River Guides*, that is today the serial *Boatman’s Quarterly Review*. See elsewhere herein for additional information.)

*Part 33—“Other” Grand Canyons* is no longer updated and is not included in *THE GRAND CANON*. That part, which tracked uses of “Grand Canyon” in other geographical locales, was removed as a matter of pragmatic bibliography, not truly pertaining to the Grand Canyon except through nomenclature and comparison, analogy, and metaphor. These separately lists are now appended to *THE GRAND CANON* as literary compilations but otherwise they stand independently of the overall bibliography.

*Part 34—Miscellaneous Manuscripts* was removed from this version of the bibliography in November 2003; it was also removed from the Internet Edition online. Originally, I had believed it was prudent to include manuscript materials that were cited by other sources, in order to include those records in the bibliography. However, this is not the purpose of the bibliography; tracking manuscript and other primary source materials is an entirely separate project, one for someone else to pursue.
Newspapers

As noted above, newspapers are not generally included in THE GRAND CANON. There are, however, some exceptions. The New York Times is accorded its own section in this bibliography (see below), and citations from the earlier years of the Deseret News (Salt Lake City) are placed within pertinent parts of the bibliography (also see below). In other instances a newspaper is cited in THE GRAND CANON if an article had been reprinted later in another periodical; the original source is acknowledged in a comment at the end of the citation. Special-interest newspaper-format periodicals are included in the bibliography, too; for example, High Country News. Weekly or other such newspaper magazines are also included; for example Flare from the Arizona Daily Sun (Flagstaff) and Computerworld.

Part 31 of THE GRAND CANON (Newspaper Guide) comprises a listing of regional newspaper that titles that some researchers may wish to use as an entry to locating local sources of published information.

The New York Times. From The New York Times as many pertinent articles as possible have been cited in so far as they relate to the Grand Canyon and lower Colorado River. This newspaper was published from the beginning of modern excursions into the region, in the mid-19th century. It is as well a well-recognized periodical that is widely available through microformed products and online. The Times is relegated to its own section of this bibliography, its citations arranged chronologically (see Part 3).

Deseret News. A purposeful comparison has been made in this bibliography to include citations from a western regional analog to The New York Times, this being the Deseret News (Salt Lake City), the oldest continuously published (now daily) newspaper in Utah. Citations from the Deseret News are included as appropriate within the subject-specific sections of the bibliography. The Deseret News's earliest years (1850-1910) are now freely available online, and a conscious decision was thus made for THE GRAND CANON to include pertinent citations from these years because, like the Times, they cover the period beginning with modern explorations of the region. Deseret News (originally a weekly, becoming semiweekly in 1865 and daily in 1899) also was published as The Deseret Weekly and Deseret Evening News, but it is cited herein as Deseret News. Its citations to 1910 I note include many articles and notes that relate to the geographical coverage area of THE GRAND CANON, much in the same fashion as does The New York Times. They are important to include herein because they have a Mormon

---

perspective of concerted efforts of church and individuals to colonize and economically
develop the resources of the region beyond the Utahn border, from Lees Ferry to deep
along the lower Colorado River corridor. And as well, the selection of news items reflects
Deseret News’s editorial slants on activities in neighbor states and the lower Colorado
River corridor. Most telling is the newspaper’s own Prospectus, which intended the
periodicals to be documents of record from the start: “A paper that is worth printing, is
worth preserving; if worth preserving, it is worth binding; for this purpose we issue in
pamphlet form; and if every subscriber shall preserve each copy of the ‘News,’ and bind
it at the close of the volume, their children’s children may read the doings of their
fathers, which otherwise might have been forgotten; ages to come.” Today, the idea of
binding is the searchable digitized page; for the next age.

Since most of the citations from the Deseret News have been taken from the
online postings of this newspaper, take note that the pagination reflects the pages as
enumerated in each issue. In actuality, the newspaper is paginated, at least in its early
years, consecutively through the entirety of a volume. As a result, notations have been
inserted into the citations in this bibliography that note “issue pagination”, which
begins with page 1 of each issue as denoted in the online postings. User who refer to an
issue will have to count forward from the first page to reach the item in question.

Organization of the Bibliography

The bibliography is now divided into 32 parts by subject. This is significantly more
expansive than the 10 parts of the 1981 edition (Grand Canyon Natural History
Association Monograph 2) and the 12 parts of the 1990 edition (Grand Canyon Natural
History Association Monograph 8). [See the Appendix to Part 1 of the bibliography for a
complete description of the arrangement of the previous bibliographies.] The present
32 parts are more informative and useful groups, as shown in the Table of Contents.
This was done partly in response to specific requests from users of the previous
editions, and partly on my own initiative. For example, it seemed to make sense, from
the standpoint of a researcher interested in a specific subject, to segregate citations
about hydrogeology from the rest of the geological citations, because of the great
amount of work being conducted in the Colorado River corridor through the Grand
Canyon. Some parts are exceedingly brief—the nature of the subject rather than
oversight—while others are extravagantly rich with citations.

Creating 32 parts from the previous dozen may seem to be counterproductive by the users who search the entire bibliography for a particular author or journal title (to select two examples). In the print medium this would be true. But the utility of the search functions of the Internet Edition eliminate problems such as this; all occurrences of the search string, from across the entire bibliography, can be returned. The electronic medium is not perfect; some searches will yield false returns because the search string just happens to be present in another context from the one intended. These kinds of problems are bound to improve with time and with advances in technology. In the meantime, they are usually little more than annoyances. The 32 parts in print, or browsable digital format, make sense again for those users who do not wish to rely on key-word searches for their immediate need, or who wish to extract single parts for separate use. Neither is there any other satisfactory way for a new researcher to the Grand Canyon and the Colorado River to grasp the whole body of work that has already been done than to peruse the whole body of THE GRAND CANON.

The “Miscellaneous” part of the original bibliography has been eliminated. As well-meaning as is any collection of “miscellanea”, a list composed of them will be overlooked; or, when it is examined, it is looked at as an afterthought or as a last resort. Most of the citations which appeared in the several subsections of this part of the bibliography have been transferred to PART 2. GENERAL because, after all, they are general in nature; a few were transferred to PART 32. MARGINALIA because they reflect upon the Grand Canyon’s history or historical uses but actually have nothing to do with the canyon-proper, for reasons that are clear upon reading the citations (for example, an international meeting there of scientists who study polar bears). Other subsections of Monograph 8, such as the “Special Section” appended to several parts of the bibliography, or the separately paginated “Bibliographies” and “Reviews” sections, now have their own enumerated parts of the bibliography. Of course they should have been organized that way also in Monograph 8. But recall that Monograph 8 was a loose-leaf product, so designed to accommodate supplements (of which one was published, in 1993) that continued the pagination of each part or section. The publisher also strived to keep the number of dividing tabs to a minimum, a matter of economy for the most part. Nonetheless, this failed to significantly reduce the thickness of the binder’s contents. By the time “Supplement 1” was published the binder was filled. No one (not even I) had anticipated so much more would be added to the bibliography so quickly. While plans went ahead to eventually publish a second supplement, it became clear that another binder would be needed. It would create a logistical problem for the hundreds of users who already had copies, and an expense...
for the publisher particularly since the Monograph series, while purposely of limited
distribution, was also by and large distributed free of charge within the library and
academic communities. Furthermore, users reported that even with just one
supplement the bibliography was becoming unwieldy, with now two places to look
instead of one. So the prospect of an entirely new, third, edition looked toward being
one that could be easily updated and corrected; in other words, a digital bibliography
of some kind. The Internet Edition is the result.

Citation Format and Content

When I began compiling this bibliography in 1974, the citation style was simple,
mimicking a style with which I was familiar as a beginning student in geology;
specifically, the editorial style adopted by the Geological Society of America. I also was
mistakenly under the impression that, as shown in many scholarly journals, only the
initials of authors’ given names were used; for example, “Powell, J. W.” I carried forward
with this style for some time before abandoning it in favor of a style contrived more for
displaying full titles and authors’ names wherever known. Not until I prepared sequel
typescripts for what became the 1990 published second edition of the bibliography
(Grand Canyon Natural History Association Monograph 8) did I attempt to remedy this
situation throughout, with only partial success.

Informal typewritten supplements followed the 1981 first edition, including in the
late 1980s a supplement that was composed of cut-and-paste entries physically
arranged on sheets and photocopied. The 1990 second edition of the bibliography saw
the first large-scale re-editing of the bibliography. “Supplement 1” to that edition, in
1993, carried forward in the same format. In the late 1990s, with the move toward a
digital edition of the bibliography, I undertook a wholesale re-editing of the bibliography;
its citations as well as the categories represented in it. This became the Internet Edition,
which as a searchable database was posted to the Grand Canyon Association website in
January 2000; and to that edition emendations and additions online continue to be
made to the present. The Internet Edition makes some concessions to technology, partly
in the content of citations, and partly through the way it is presented to the online user.
The elasticity of websites countermands the permanence of inkprint, and I witness
variations in display depending upon the computer used, and sometimes depending
even upon the nature of the query. Be this as it may, the Internet Edition is exceedingly
more useful for those who wish to query the entire database, although in the process
one does not have the experience or the feedback that comes through seeing the whole
product in contiguous format. THE GRAND CANON, which is the working and authoritative
version of the bibliography, has continued to be improved in its digital manuscript form, with internal editing, revisions, and layout changes; this is the product that you have in front of you now. While the uniformity of citations is elusive without a tremendous effort of re-editing yet again, I am satisfied that it functions and is presented well enough to stand on its own. Nonetheless, there are numerous minor points that have not been incorporated into the otherwise concurrent Internet Edition online. *THE GRAND CANON*, then, is the “official” version of the bibliography if one must be designated; it is certainly the presentation more intended by me.

In compiling a bibliography, some key, arbitrary decisions must be made regarding the structure of the citations. The citations in *THE GRAND CANON* are constructed not so much for the use of bibliophilic collectors as they are for those who usually use library catalogues and online databases when they search for copies of items. Citations here do not carefully reconstruct the layout of title-pages nor record the physical construction of the work, although any peculiar information that I have deemed important or interesting will be appended to the citation as a note.

The author (or other creator, which may be an organizational entity or branch of government) is the distinguishing and responsible authority for a work. A bibliography should function as an evidentiary record of the work of individuals, organizations, and agencies. Of course, a bibliography does not mandatorily have to list things by author or creator, but inasmuch as this is a world investigated and manipulated by individuals, including those who populate organizations and agencies, it is sensible to account for their productive activities according to the names of the creators responsible for published works. These people or organizations may not be the actual writers (or creative sources) of items; for example, official notices in the *Federal Register* are signed by accountable administrators. Some items have been produced by numerous people as a function of their official duties and who are uncredited, but the signers (persons or organizations) serve as the acknowledging source or official reporter for the material; and in that bibliographical sense they are “authors”.

Second, a title usually must precisely replicate the title as shown in the publication. If it does not carry a title, as is the case of many news notes, a descriptive title contrived for the bibliography is placed within [square brackets]. Authors’ and publishers’ conventions are retained as printed. Thus they record variances of spelling, misspelling, mispunctuation, and any other particular usage by the author, publisher, or other creator of the work.

Spellings of proper names are likewise cited as they appear in the printed works; most noticeable herein will be the distinction between “Canyon”, “Cañon”, and “Canon” (lower- as well as upper-case). While I might have made it expedient for those who do electronic searches, by standardizing all of these as “Canyon”, it is not faithful to the
original. Furthermore, there can be devised technological ways of returning all of these spellings in a generalized search for any one of them, albeit this may tender some expense of programming since this is not now the norm. I am in any case firmly of the belief that future technologies will accommodate these variances with greater ease, and there is no need to forego now the accuracy of precise title quotations. I wholly disagree with decisions that allow the limitations of current technology to determine the structure of a work; it makes the useful life of the work much shorter. (Some users may recall the days when short or rigorously defined “field lengths” in databases required the invention of contorted abbreviations and other short-cuts for data that are now entered fully.) Present-day users will also have to forgive the cumbersome reliance on ASCII character entities, numerous subsets of which have been devised to accommodate the alphabets of foreign languages and special-needs fields of academia. The numerical character entities are used only for uploading citations to the Internet Edition of the bibliography.

Here in *THE GRAND CANON* many citations are in a somewhat cleaner, more consistent style than will be seen in the Internet Edition online. This is because I have indulged myself to make global and sporadic changes alike to this “official” version of the bibliography, which are not possible to make in the online version due to insufficient software capabilities. Nevertheless, these are stylistic variances, not changes to content. For the purposes of research and other exploratory ventures into the online bibliography, it is contextually the same as the version presented here.

**ABBREVIATIONS**

One of the more noticeable edits that I have made to the citations since the 1981 edition is the elimination of all but the most standard abbreviations. The abbreviations “ed.” or “eds.” remain for editors, and likewise “ed.” remains for “edition” (in context, there is no confusion); spelling these out seems very peculiar anyway. All other abbreviations are spelled out so as to make these things unambiguous, especially for users who may not be familiar with the conventions, and for new users such as students who have not yet encountered the often-problematical proliferation of abbreviations in bibliographical citations (see next section).

I avoid the librarians’ standard use of “s.l.” and “s.n.” for citation information relating to absent places and names of publishers—“s.l.” is an abbreviation of the Latin *sine loco*, or “without a place”, indicating that the place of publication is not indicated in the publication or otherwise is undetermined; “s.n.” is an abbreviation of the Latin *sine nomine*, or “without a name”, indicating that the publisher is not indicated in the publication or is otherwise undetermined. While these Latin abbreviations are more international in use, and “unambiguous” when used thus, they are unambiguous only within the library community and among readers who are already familiar with these abbreviations. They *are* ambiguous if one does not know what they mean. As like my
avoidance of abbreviated citations to assist those who may not understand the abbreviations, in THE GRAND CANON I use “[no place]” for s.l., and “[no imprint]” for s.n. or for the absence of both place and publisher.

The use of “[sic]” for designating some precisely-quoted information is retained by convention; there is nothing shorter or devoid of ambiguity. It is Latin for “thus”, meaning “exactly as used”; it is not an abbreviation. It does not always point to an error, but rather to a distinguishing feature in a citation that may be misconstrued for something else.

**ABBREVIATIONS OF PERIODICAL AND SERIAL TITLES**

Nearly all abbreviations have been eliminated. The problems attending abbreviated citations in bibliography are well-known; I have discussed some in a different venue, but I revalidate those points here. Basically, for centuries the abbreviated citation was a convenience of typesetting economy, if not so much to save space on the printed page then to expedite labor when type was hand-set and redistributed to its boxes after the job was printed. It became needlessly a caché for scholastic prowess, too. In electronic media such economy is a moot point. And further, abbreviations are now less intuitively obvious. Today, researchers cannot know of, much less be conversant in, the mnemonics of abbreviated citations in fields about which they are less experienced or which they are just entering, nor can all readers (or librarians) be expected especially to understand the abbreviations of foreign languages. All journal titles are spelled out in this bibliography (and about which see more below).

**AUTHORS**

In THE GRAND CANON, the author credit is the determining alphabetical index. This in turn may be seen in the citation styles of some publications, some of which, presumably for the sake of publishing space, omit titles of works that are published in journals; in this way, for example, they will cite First Author [et al. is appended if there are more], date, Journal Title, volume and pages.

The arrangement of citations by authors in THE GRAND CANON is not precisely alphabetical by all authors of a publication; an arbitrary decision. The format followed (as illustrated below) is: single-authors first, dual-authors second, and, third, all multiple (more than two)-author citations then in strictly alphabetical order regardless of the number of authors. Some dual-author citations may appear out of alphabetical order before the multiple-author citations (see below). This scheme is followed for the reason that sometimes a researcher must reverse-discern the authorship of an item without knowing all of the names. The researcher may have in hand a citation only for

---

“Author Name et al.”, which usually indicates three or more authors for the cited publication; thus will not have the complete list of authors. The citationist’s own full list of references cited may not be available, or the editorial style of a journal may systematically omit all multiple-authors’ names from citations (for example, in the mainstream journal Science, which also omits the titles of papers within cited journals), it is more difficult for the researcher to determine who are the authors. In a very long list of publications (for example, those of Edwin D. McKee), searching through all of the author’s publications will be decidedly more tedious than searching through just the listing for multiple authors for which this author is the lead author.

Authorship listed as “Anonymous” indicates only that there is no signer. When in the rare circumstance that an item is actually signed, “Anonymous”, that fact is also indicated in a note to the citation. All “Anonymous” items within each part of the bibliography are listed first, preceding “A”.

The following example illustrates how authors are listed in THE GRAND CANON:
Single authors are listed first:
1. **Smith, A. B.**

Dual authors are listed second:
2. **Smith, A. B., and Anderson, J. L.**
3. **Smith, A. B., and Zimmerman, J. L.**

All multiple-author citations then follow in alphabetical order; they are separated from the others, when appropriate, by a list interjection in red:

**Smith, A. B., *et al.* **

4. **Smith, A. B.; Anderson, J. L.; Jones, C. D.; Smythe, M. N.; and Betson, A.**
5. **Smith, A. B.; Jones, C. D.; Smythe, M. N.; and Anderson, J. L.** "
6. **Smith, A. B.; Jones, C. D.; Zimmerman, J. L.; and Betson, A.** "
7. **Smith, A. B.; Smythe, M. N.; Zimmerman, J. L., and Jones, C. D.** "
8. **Smith, A. B.; Zimmerman, J. L.; and Jones, C. D.** "

*The list interjection in red is used in this bibliography to separate groups of one- or two-author citations (for the same first-author name) from multiple-author citations in juxtaposition (following the order depicted above). The interjection is not used when only multiple-author citations are present for a particular first-author name, inasmuch as these citations all will be grouped together and will appear in strict alphabetical order (as in items 4–8 shown above). [Click here](#) to see a complete example of the use of the page interjection in the bibliography. While it may seem superfluous to use the separator in some cases (such as when there are just two or a few citations), it is so used for consistency and to appropriately accommodate future additions to this continuously updated bibliography.*

*In a strictly alphabetical sequence—not used in this bibliography—the citations shown above would be listed as follows (retaining the enumeration shown above):*

1. **Smith, A. B.** [1 author]
2. **Smith, A. B., and Anderson, J. L.** [2 authors]
3. **Smith, A. B.; Anderson, J. L.; Jones, C. D.; Smythe, M. N.; and Betson, A.** [5 authors]
4. **Smith, A. B.; Jones, C. D.; Smythe, M. N.; and Anderson, J. L.** [4 authors]
5. **Smith, A. B.; Jones, C. D.; Smythe, M. N.; and Anderson, J. L.** [4 authors]
6. **Smith, A. B.; Jones, C. D.; Zimmerman, J. L.; and Betson, A.** [4 authors]
7. **Smith, A. B.; Smythe, M. N.; Zimmerman, J. L., and Jones, C. D.** [4 authors]
8. **Smith, A. B.; Zimmerman, J. L.; and Jones, C. D.** [3 authors]

Note that were one to have in hand a second-hand citation for “Smith et al. 1947”, not knowing the names of the other authors, one would in a strictly alphabetical list have to search the entirety of the Smith citations for a 1947 citation rather than just the multiple-authored items that would follow “Smith and Zimmerman”.
The alphabetization of authors’ names that include an abbreviation (for example, St. John) are placed in this document in the traditional location of spelling them as if they are spelled out (Saint John). I otherwise do not retain the classical card-file, phonetic but arbitrary, alphabetization of “M–”, “Mac–”, and “Mc–” preceding all “M’s”; I list each in the more modern, strictly alphabetical order. For example, the traditional filing scheme (not used herein) would list, in order:

- M’Allen–MacAllen–McAllen (as if all were spelled “MacAllen”)
- MacClure–McClure (as if both were spelled “MacClure”)
- McPherson–MacPherson (as if both were spelled “MacPherson”)
- Mackey
- Maclure

The more modern, strictly alphabetical system (used herein) reflects actual usage in publications and alphabetization. These authors will be listed in order as:

- MacAllen
- MacClure
- Mackey
- Maclure
- MacPherson
- M’Allen
- McAllen
- McClure
- McPherson

In the Internet Edition of this bibliography online, queries retrieve results in strictly Boolean, alphabetical order, then (following programming) chronologically within each unique author string. The difference is strictly one of technology versus tradition. Of course, an algorithm could be created to return even online results in the traditional fashion as shown above, but this is not necessary for the purpose of simply obtaining results. Inasmuch as the online citations are exported from the present document (THE GRAND CANON), I continue to maintain THE GRAND CANON in the format of a traditionally printed bibliography—a means by which to display the contiguous whole of the work, in a format that safeguards that of an aesthetically proper printed version, which thus can be produced if necessary.

An author’s name has been partly standardized, where, for example, it is spelled out but in different publications it may be spelled with first initials or even a nickname. Not all such instances have been standardized, however, since an attempt has also been made herein to preserve the names under which a particular item has been published (and by which a librarian’s request for a copy on behalf of a patron may be fulfilled).
One example is the ecologist Lawrence E. Stevens, who also publishes as Larry Stevens, whether the item was one of formally published scientific content or one for a general, informal readership. In this bibliography his citations will be located under both names, sometimes with a cross-reference to one or the other. In the event that *The Grand Canyon*’s author citations are fully standardized in the future, each instance will have to be accounted for.

One may expect a single spelling for an author’s name, but as this is not the case many libraries (including the Library of Congress) devise cataloging schemes that standardize as best as possible the names of authors. I, however, prefer to use an author’s usage when he or she may write under several different names in separate venues; for example, a full given name, a nickname, or a pseudonym. Where possible, I provide cross-references so that searches will find all pertinent citations. Another deviation I make from conventional cataloguing schemes like that of the Library of Congress is to acknowledge both text writers and illustrators in the author field, at least so far as when these attributes are acknowledged together on a title-page (but only when they are so acknowledged).

When I began compiling this bibliography in 1974, I had begun with the mistaken impression that a conventional citation style was to use only the initials for authors’ given names. I had gotten this impression from the house styles of some of the technical journals I was then reading. I continued this process for some time before realizing that it was not only unnecessary, but contributed confusion. Eventually, I retrocited most authors’ names, but there may be occasional instances throughout the bibliography where I am not aware that an author cited with initials had a fully spelled name in the publication, which I have not seen since or had relied upon another citation.

Care must be taken by the user in knowing, or making assumptions for, an author’s name that may be spelled in slightly different ways. The alphabetization scheme is precise, and precise spellings are unforgiving. One user of the bibliography was dismayed to find that I had not cited any of the important works by the early Colorado River hydrologist E. C. La Rue; but the user had not found the citations because the query had looked for “LaRue” (with no space). Oddly enough, they might likewise have had difficulty even in a traditionally published bibliography, where for example “LaRue” (no space) would appear after “Laddon” and other intermediate spellings, and “La Rue” (space) would appear before “Laddon”. The search software in the online bibliography is not so sophisticated as to return “La Rue” and “LaRue” together. And, even though a general literature search beyond this bibliography may
find both “LaRue” and “La Rue” in citations, as well as published by-lines similarly spelled, I have adopted the author’s own preferred usage, with the space.

Similarly, I have used spellings as they appear according to authors’ usages, and from title-pages, rather than usages standardized by cataloguers. This because I trust the author’s own usage is authoritative and intentional, which conveys biographical information as well as bibliographical.

In instances where an article was written by one person, and illustrated by another, I list both names (or as many as which occur) in the author field so as to attribute the creative work of all contributors.

**Dates** Only stated publication dates are used in *THE GRAND CANON*; that is, only years that are indicated on the title-page, or elsewhere in or on the publication in such a way that unambiguously records the publication date. If a date is not so indicated, “no date” is inserted in the date field of this bibliography. If a date is subsequently ascertained, or if one is interpreted or approximated, the information is included in a comment at the conclusion of the citation; “no date” remains in the date field. Items with “no date” are listed prior to dated items.

“Western” year dates are used. When a document also provides a culturally different year (as in this Persian example), that date is included in a comment.

**Titles** In every instance, the title of an article or book is authoritative. They are cited in *THE GRAND CANON* exactly as they appear in the published works, including misspellings and punctuation.

The only concession I made to a “house style” for *THE GRAND CANON* is the use of a semicolon between a title and a subtitle (for example, *The title is here; the subtitle here.*), except where the original uses instead a period or a colon. This is a style that I had used since beginning the bibliography in 1974, and it is rather impossible to now retrofit the citations to a style more in keeping with those used by libraries. In their example, breaks between titles and subtitles are separated by a colon that is itself between spaces (for example, *The title : the subtitle*). Applying a simple global replacement of my use of the semicolon in this bibliography is impossible because in some instances there really is a semicolon or a colon. Verifying each instance against the originals is now pragmatically impossible.

Capitalization in titles is not fully capitalized even where the typeset title has every main word capitalized. Such a citational style makes for a more easily read
citation, and except in some historical or purely bibliographical venues the mostly-lowercase style of title citation is conventional. The only concession to this rule is the retention of capitalized nouns in German.

In foreign-language titles, diacritical marks are displayed as printed. Sometimes the marks are omitted, as shown, or in some house printing styles diacritical marks are omitted from capital letters. No attempt has been made, in titles, to insert missing diacritical marks (as printed) when they otherwise should be present according to proper spelling in that language. (Regarding diacritical marks more generally, see separate comments.)

**Italics** convey the information under which the publication is most likely to be found in a library. Full, complex titles are cited unless special circumstances call for the use of an ellipsis (...), such as to omit lengthy lists of extraneous information on the title-page such as an author’s academic credentials or scholarly affiliations. *(THE GRAND CANON* does not strive to perfectly reproduce the bibliographical content of title-pages, but rather it conveys the *citational* data contained on title-pages, verbatim.) In some instances where the citations were received through another authority who used an ellipsis, and I have not examined the title myself, I retain the ellipsis without remark. Where an ellipsis is actually a part of the title, I so indicate with an annotation to that effect. Little standardization has been employed in citing article and book titles in this bibliography, so as to maintain precision; an exception is the insertion or spelling out of “Volume” where such is necessary (when it is not part of actual usage), and similar contextual changes. Typographical errors are denoted by the interjection or suffix “[sic].”

Where I have had to contrive a title, such as when an item is not headed by one, I enclose the contrived, descriptive title within [square brackets]. In some cases a title may be ambiguous, uninformative, or seemingly not pertinent to the Grand Canyon–lower Colorado River region. In these instances I appended to the citation a square-bracketed comment that briefly explains the pertinent content.

I distinguish between periodicals (regularly issued publications) and serials (irregularly issued publications usually as separate volumes in a series of one name). Generally speaking (take note also of the italicization scheme in these examples), a periodical will be cited as like

*Title of article. Periodical Title, volume(number)(date/time of year):pagination*

while a serial will be cited as like

*Title of work. Serial Title, number, pagination.*
In the case of books that have been issued as part of a series, the series title is usually placed within parentheses at the end of the bibliographical citation, thus:

*Title of book.* Place of Publication: Publisher, pagination. (Series Title.)

Regarding the styles of citation for periodicals and serials, see the section, *Periodicals and Serials Cited in the Bibliography*. See separate remarks pertaining to diacritical marks.

**Editions** ❖ Citations of books that have gone through more than one edition attempt to be comprehensive, insofar as only editions that contain material relating to Grand Canyon or the Colorado River are cited. However, not all editions of some publications have been examined; so, for example, if only a 3rd edition is cited, one should not automatically suppose that the 1st and 2nd editions omit coverage of the region of interest. In other instances, various editions have been prepared by different authors. In such cases, when possible a notation is included with the various editions that will point the user to the authors of the earlier or later editions, as appropriate.

**Publications Printed on Demand** ❖ Since the latest part of the 20th century a broadly focused effort to print publications on demand has expanded the availability of numerous publications. Some of these are recent titles that publishers do not see economy in keeping continuously in stock. Numerous more are titles that are long out of print, especially those that are now in the Public Domain (that is, their copyrights have lapsed). It is this latter venue that is most attractive to numerous distributors, who may reproduce these works at the cost only of immediate production and replication on an individually-ordered basis. These may be either in facsimile or reproduced through optical-character recognition methods, or even through a outright resetting of text; some may include the original illustrations, many omit them (and usually without removing references to such illustrations). Some are very well done; others are embarrassingly sloppy. The publication-on-demand market has become widespread even if not widely used by readers; yet another reason that its economy is sensible to its distributors. And as may be expected, the larger number of such publications are culled from the Public Domain simply because they are “ripe for the picking”. One good example of the diversity of both conventionally printed and on-demand publications may be found in Harold Bell Wright’s novel of the irrigation empire of the lower Colorado River, *The Winning of Barbara Worth*.

In *THE GRAND CANON*, titles that are published on demand are cited, but there has been no effort made to purposely find all such available titles; only those that have been found during other routine searches or serendipitously are included here. Because there are so many, and because the dates of publication are not necessarily
authoritative, citations for publications on demand must be taken as strictly informational guides to what is available, bearing in mind the caveats just mentioned.

**Scholarly-Symposium Publications**

There are many variations of titles of symposium proceedings, field guides, and other scholarly-meeting volumes—and about as many methods of citing them. This bibliography attempts to remain as faithful as possible to the ways in which the titles and additional publication data are written, rather than invent a standardized citation. This method may be more advantageous because some libraries may catalogue them in different ways which depend upon the skill of the cataloguers as well as the organizational schemes used in the library. In this manner, the actual title or data from the document can be referred to in such a way that the local librarian can examine it and determine how it might have been catalogued there.

Some such publications were more traditionally published, as separately citable, separately sold books that happen also to be symposia proceedings. Most, however, are quickly-produced documents with limited distribution, such as to the conference attendees. Such forms of “gray literature”, while they are in turn cited in later publications, are especially problematical documents to those who try to find them. Listing them in a bibliography is as much a contextual approach as it is one of standardized procedures of cataloguing (and citation).

Sometimes, the titles of a symposium as published reflect an “officially sanctioned language” with which all official transactions and published communications were spoken and published. For example, early meetings of the International Geological Congress used French as their official language; today it is English. Possibly, publications distributed under such sanctions may, in some libraries, be catalogued according to their published titles; others may catalogue them by a standard which conforms to the home-language while taking in a verbatim quotation of the specific title. Thus, for example, the *Compte Rendu* of the “Sixième Congrès International de Stratigraphie et de Géologie du Carbonifère” may be catalogued as “International Congress of Stratigraphy and Carboniferous Geology, 6th, Compte Rendu” or “Congrès International de Stratigraphie et de Géologie du Carbonifère, 6th, Compte Rendu”, depending upon the cataloguing scheme.

The permutations seem endless. In the matter of a disclaimer, some citations have been taken on the authority of other researchers, whose citations may not be whole or precise; these have been cited in *THE GRAND CANON* in the best-adapted format.
United States Government Agencies  ❖ “U.S.” is used as a prefix to titles that are from federal government agencies of the United States of America, whether or not “U.S.” or “United States” is part of the name or title; for example, the Government Printing Office in Washington, D.C. is cited as “U.S. Government Printing Office”, or the National Aeronautics and Space Administration is cited as “U.S. National Aeronautics and Space Administration”. In some cases, for standardization “U.S.” is used as a contraction in a serial title or agency name where “United States” is actually spelled out; for example, “U.S. National Academy of Sciences”. Another variant is the “Supreme Court of the United States”, which in THE GRAND CANON is alphabetized under “U.S. Supreme Court”. However, in book and article titles “U.S.” and “United States” are cited as they appear in the title; this includes variations of abbreviations, such as “US”, “U.S.”, “USA” and “U.S.A.” Similarly, abbreviations of any kind, when appearing in a title, are reproduced exactly as printed.

Within the scope of THE GRAND CANON commonly encountered bureaus within U.S. governmental departments are attributed by the bureau names rather than as a subset of the department. For example, the U.S. Department of the Interior, Bureau of Reclamation, is cited in this bibliography as U.S. Bureau of Reclamation; or, the U.S. Department Agriculture, Forest Service, is cited as U.S. Forest Service.

Places of Publication  ❖ City names in the place of publication are listed with the state in which they occur regardless of whether it is specified in the publication (for example, “St. George, Utah”). This is done to facilitate more ease of use among those who may be less well informed about American geographic locations, even though the additional information may not appear on the title-page or with publisher’s information. Exceptions are major world cities (for example, New York and London) and certain frequently cited major American cities, such as Chicago (Illinois), Denver (Colorado), Las Vegas (Nevada), Los Angeles (California), Philadelphia (Pennsylvania), Phoenix (Arizona), Salt Lake City (Utah), San Francisco (California), and Tucson (Arizona). “Washington, D.C.” is used for the District of Columbia.

Outside of the United States, with the exception of major world cities, the places of publication are listed as given in the publication, including where names are translated into another language (Latin, for example). Countries are added where they are known when it is prudent to do so.

No abbreviated state or province names are used, except in the cases of direct quotations of titles. Foreign readers should not be expected to understand, or to try to find out the meanings of, the two-letter postal-code abbreviations for U.S. states and Canadian provinces (for example, “ME” for Maine, “MN” for Minnesota, or “NJ” for New
Jersey) or their older contractions ("Me.", "Minn.", and "N.J." for these same examples).

**Diacritical Marks** 

In *THE GRAND CANON* diacritical marks are reproduced faithfully; similarly they are omitted when *not* so printed even when the language properly uses them. Diacritical marks are reproduced in authors' names, too, when so used. Characters with diacritical marks are alphabetized as if they do not have these marks; for example, Ø, Ò, Ô, Ô, Ø all are alphabetized as like “O”. (This is notable because in some languages, such as Swedish, letters with diacritical characters are alphabetized all following “Z”; for example, O precedes Z as one expects, but Ø comes after Z.)

Diacritical marks present in *THE GRAND CANON* may not be displayed in the Internet Edition of the bibliography because some extended or special HTML entity codes are not accommodated (particularly during the earlier years of the online presentation). In those cases, the equivalent unadorned Latin letter is used. For example: ę as printed in *THE GRAND CANON* is e online, Ş is S, or ż is z. The same principle applies for diphthongs, like æ [Latin] or ij [Dutch], which often will have been retyped for the online version of this bibliography as double-letter ae and ij, respectively. I have sometimes preserved the use of diphthongs in citations, and adding if necessary a double-letter version in a square-bracketed phrase appended to the citation to allow conventional searches to locate these citations. However, I have not been consistent, given the fact that I am now in the fourth decade of compiling this bibliography. Still, I have preferred to preserve original uses as much as possible because I believe that eventually the technological means will be available to conduct searches that will return in single searches the diacritical equivalents to plain-letter characters. In the meantime, users might consider using a shorter or modified search string or, if diacritical characters are known in their proper places, by using wildcards in the search string.

In a few instances, I have pasted a citation into *THE GRAND CANON* that reproduces the original typography of a title. For example, one Korean citation includes the Korean characters, and a Burmese citation includes special character entities that could not be replicated with the expanded entity lists generally available. These strings, though, do not appear in the Internet Edition online; only here in *THE GRAND CANON*.

**Reviews** 

The Reviews section of the bibliography (Part 30) contains critical and casual reviews of publications and products, listed by the author of the review. In retrospect, I should have preceded each citation with a square-bracketed notation, “[Review]”. Unfortunately, even though an online search in the Internet Edition retrieves the author’s name of a review, the fact that the citation also includes the
author’s name of the publication under review has led some users to assume that the cited subject of the review is yet another publication by the reviewed-publication’s author. For example, the citation

Aiton, Arthur S.  

could be misread as an item authored by Bolton in Hispanic American Historical Review—even though the author field clearly indicates “Aiton”. (An example like this was noticed and queried by a professional librarian, who should have determined the distinction without a special square-bracketed notation. So I must likewise assume that my oversight in not specifying “[Review]” may lead to confusion among even regular users of the bibliography.)

When using the Internet Edition of the bibliography one should always be aware of the section from which a citation has been retrieved, as indicated by the first part of the Item number. In this way not only can misconceptions like the example above be avoided, taking notice of the Part number that is incorporated as part of the Item number (before the decimal) will indicate whether the item is, for example, a general work (2.), fiction (7.), poetry (8.), an audio-visual work (26.), a review (30.), and so on. This is additionally useful for items that have a categorically ambiguous title, like “The Grand Canyon”.

**FOREIGN LANGUAGES**  ❖ The bibliography includes citations for works written in 54 languages other than English, including several Native American languages and the artificial language Esperanto. While some languages are represented by a large number of citations, such as French, German, and Spanish, others are represented by a few citations, or but one. This does not mean that some languages have published only very few items about the Grand Canyon; it means only that few publications in those languages have thus far been found for THE GRAND CANYON. Further discoveries will be either serendipitous or as the result of a concerted program of bibliographical research. The citations in this bibliography should not be construed to be “everything”; only everything that I and contributors have thus far found. Similarly, there are likely to be some languages not yet represented herein that have pertinent publications about the Grand Canyon or the Colorado River. (A complete list of foreign languages cited in the bibliography at this time follows farther below.)

Lest one be perplexed by a foreign-language citation, the proliferation of online translators (for example, [http://translate.google.com](http://translate.google.com)) will greatly assist with some of them. Many automated translations, particularly those for common languages, are quite satisfactory; and for those that are not so satisfactory, such as with languages
very different from the European traditions, often they provide enough so that even if one is wholly unconversant in a language the gist of what is written can be discerned.

Foreign-language citations usually are cited as they appear in the originals, with the exception of languages that use non-Latin characters, which then are cited either in transliteration or parenthetical English translation, or both. Nevertheless, even though one user or another may not be able to read Norwegian or Welsh, for example, citations still are useable and, should the user need to follow up on some with assistance they may do so. In any case, translations of foreign-language titles are not often provided in The Grand Canon. Even though some reliable automated translation programs are available through the web, subtle nuances can be missed, so only professional assistance should be relied upon if translated titles are desired in future versions of this work.

The user is at an advantage if he or she is attuned to the typological or etymological appearance of different languages. One should be able to at least recognize in a general way common languages that may be represented among non-English citations, without having a notation indicating the language. For the most part, in The Grand Canon common languages like Dutch, French, German, Italian, and Spanish are not specially indicated by a comment (although a few citations carried over from older editions of this bibliography and overlooked during editing may include such comments). In other cases, languages perhaps less familiar to most users of this bibliography are indicated as a comment (see examples in Estonian, Finnish, Hungarian, and Welsh), which may be especially useful among languages that are outwardly similar (for example, Danish and Swedish, or Czech, Slovak and Slovenian). In other cases, I have included a notation identifying the language so as to clarify citations that have been transliterated to Latin characters from non-Latin character sets (see examples in Arabic, Chinese [traditional and simplified character forms are not differentiated in this bibliography], Georgian, Greek, Hebrew, Japanese, Korean, Russian, Thai, and Ukrainian), or sets that contain additional characters not used in otherwise Latin alphabetic sets (see example in Icelandic). Others are wholly contrived alphabetic sets based on Latin letters and diacritical marks (see examples in Burmese, Navajo, Southern Paiute, Thai, and Vietnamese). In the case of transliterated citations, particular schemes of transliteration are not indicated because the sources usually do not indicate that information. Occasionally, an English-language title may also be printed in a source that is otherwise in a foreign language. In such cases the English-language title is used as provided in the publication (see examples from Czech, Japanese and Hungarian); occasionally I have had to clarify a translated title (see example in Korean). In some cases only a translation within square brackets serves as the citation (see example of this kind for Japanese). For the most part, detailed
portions of foreign-language citations are not offered in English translation, but when a translation is also provided in the document is it included in the citation (see a full example in Vietnamese) or where a partial description was in English but an online translator was used to establish a fuller translation (as in an example in Macedonian). In a very few cases in THE GRAND CANON (not in the Internet Edition of the bibliography), non-Latin foreign language scripts have been copied into the citation, but these have been opportunistic inclusions only and are not the norm (see examples in Chinese, Hebrew, Korean, Persian, and Russian; or, in an example in Greek that was originally in all-capital letters, transcribed for the bibliography into capital and lower-case Greek letters). And in one instance a Latin character-based language with some diacritical marks not generally available in word-processing programs has been copied into the citation (see example in Burmese).

Listed below are the 54 languages, other than English, represented in citations in THE GRAND CANON. While for most of these languages only a few citations are listed (sometimes just one), they still represent the diverse spread of attention to the Grand Canyon and the Colorado River in publications worldwide. Surely more references may be found for those languages, and in additional languages that are not yet included here. Clicking on a name will take the user to an example in one of the several possible citation styles noted above:

Afrikaans
Arabic
Basque
Burmese
Catalan
Chinese
Croatian
Czech
Danish
Dutch
Esperanto
Estonian
Filipino (Tagalog)
Finnish
French
Frisian
Georgian
German

Brief Content Entirely Quoted, and References “in passing”

In some cases herein, when a pertinent reference to Grand Canyon or the Colorado River is exceedingly brief, I have chosen to quote the passage in full as a square-bracketed note. These remarks are clearly indicated with the comment, “(entire note)”, “(entire item)”, or some similar explanation. (Generally, “entire item” is used to denote that the whole item is quoted; “entire note” is used to denote the quotation is the whole pertinent part of a longer item about which the remainder is not pertinent to this bibliography.) This is done as a matter of placing the citation in context. It is also a courtesy to the user, who thus may be spared the time (and expense, probably) of acquiring or gaining access to a copy of the work, only to find there the single, brief remark. However, the limit is subjective; occasional short passages in print may not be quoted in their entirety and thus not marked by a comment. Some citations compiled during the early years of this bibliography will not have any brief-content notes.

If mention of the Grand Canyon or Colorado River is brief, it is so indicated, usually with the notation, “in passing”. These citations are included when there is more than a “drop of the name” Grand Canyon or Colorado River. For example, a writer’s remembrance of the “vast quiet” of the Grand Canyon, is significant enough to include the reference in *The Grand Canon* (particularly if the comment was made long before modern concerns of preserving the “natural quiet” of the canyon); but if a writer takes note only as a point of reference or comparison (for example, “it reminded me of the colors of the Grand Canyon” or “it may not be as deep as the Grand Canyon”), the reference does not warrant inclusion here. The comment must surely, even if only briefly, embrace some information about the canyon or the river. In *The Grand Canon* I use the phrase *passim* only where it is meant, “here and there”, indicating several or numerous, usually scattered, references to the canyon or river; the term *passim* is often misused to mean “in passing”, implying one instance. For scattered references in a large work, I usually indicate more clearly this situation either by the citation of pertinent page numbers or by special remark.

Occasional notes of the presence of a person or a group of people at the Grand Canyon will be included among the citations. These are accompanied by a note as to the name of the person or group, as a means by which to document their presence at Grand Canyon at the time indicated. Most often these references pertain to a part of an itinerary rather than the Grand Canyon as ultimate destination. Usually, if a person was renowned there may be a few additional comments, perhaps even a photograph or two, in the cited item; for example, the visits to Grand Canyon by King Albert of Belgium, and by Mme. Marie Curie the twice Nobel laureate in chemistry and physics.

---

100 Item no. 7.409 (1920) and no. 3.655 (1938, in *The New York Times*).
Notes ✤ Citations have notes appended to them within square brackets. These can be special bibliographical comments or my comments about the cited work that I deem to be important, explanatory, or in some way disambiguating. For example, as a matter of policy I make every attempt to spell out acronyms that appear in a citation but are not otherwise explained in the citation; the fully spelled phrase will appear in a square bracketed comment at the end of the citation.

A special group of notes are those that are “see” notes, which refer the reader to specific pages within the publication that I have identified as pertinent to either the Grand Canyon or the lower Colorado River. Given the dual perspective of THE GRAND CANON (the Grand Canyon and the lower Colorado River region), I sometimes indicate whether some of the “see” notes pertain only to the lower Colorado River. By default, one may assume that if no special indication is made that the pages referred to pertain to the Grand Canyon, as opposed to the Colorado River corridor below Grand Canyon; although in some instances both regions may be embraced by the “see” note, which will usually be so indicated. (One of the efforts I have made in THE GRAND CANON that is in variance with the citations that are retrieved in the Internet Edition is to standardize most appended comments, including “see” notes, within square brackets. In the Internet Edition one may see some comments within parentheses, which reflects the inconsistencies of compilation over near forty years.)

Occasionally, I have interjected a search-friendly rephrasing of a title so as to make an “expected” phrase locatable in a digital search. For example, Charles Francis Saunter’s Finding the Worth While in the Southwest will be missed if one does not know the precise spelling of the title, searching instead for “Finding the Worthwhile in the Southwest”. In the citation I have added the interpretive assist inside square brackets.\footnote{Item no. 2.5652.}

Comment on Typography ✤ Super- and subscripts are used in this document. In a few rare cases, subscripts that have further, extra-subscripted characters are not typographically displayed as such, but as a single layer of subscript characters. In context, these are not ambiguous.

In the Internet Edition of the bibliography online, however, some limitations were met with HTML coding and the website’s parser, which failed to follow the coding for super- and sub-scripts. In that venue carets (^) have been used to indicate characters that are superscripts; subscripts are denoted online with an interjected “[subscript]” or similar notation. (See also the section on Diacritical Marks.)

Undetermined Information ✤ In the matter of a disclaimer, this bibliography is always a work in progress. In a few places, informational parts of a citation
include an underscore, ______ , thus, which indicates missing information. Nevertheless, enough critical information is present, and deemed useful enough, to warrant including the incomplete citation in THE GRAND CANON. I was not able to see the complete information either because the document was not available or it was an imperfect copy; and should the information be obtained, the citation will be emended. It is also useful in this fashion so as to alert users of potentially useful items that they may be able to locate for their work through other means. 

Item Numbers

Every citation is accompanied by an “Item Number”; for example, 2.4598 is no. 4598 in Part 2 of the bibliography, GENERAL PUBLICATIONS. Item numbers were first created for the Internet Edition of 2000. Within each part of the bibliography, items are enumerated beginning with “.1”. Additions within each part continue the enumeration for the part. Item numbers for citations that are deleted from the bibliography, or are moved from one part to another (and so renumbered), are not reused. See the Statistics page of this document for the current sum of items cited herein.

While an item number provides a unique number for every citation in the bibliography, it is also useful when using the Internet Edition on the Grand Canyon–lower Colorado River website (www.grandcanyonbiblio.org). By taking note of the Item number that accompanies a citation, a user can determine the Part of the bibliography in which the citation has been categorized. This is helpful online when citations are returned from multiple parts of the bibliography; except for the Item numbers, parts (and hence subject areas) are not otherwise explicitly indicated onscreen. In some instances a title itself may not provide an indication of the item’s category or medium; for example, a title, The Grand Canyon, by itself is not informative in this regard, but an item number beginning with “6.” would indicate that it is a Youth title, “7.” would indicate a work of Fiction, and “27.” would indicate an Audio-Visual Work. See the Content Guide for a complete description of parts of the bibliography.

Citations within each part of the bibliography are enumerated beginning with “1”; thus for example, Item nos. 1.1, 2.1, 3.1, etc., were the first-enumerated items in Parts 1, 2, and 3, respectively. Because sometimes a citation is deleted from the bibliography, the last-used number with a part is not the number of citations within that part. Item numbers are not reused when a citation is deleted. Accordingly, not all consecutive item numbers in a given part of the bibliography will be present. Numbers are not reused as
a precaution against duplicating numbers in error. (Once in a while a duplicate number has been found in the Internet Edition, which was a mistake introduced by me while compiling citations. Duplicates, when discovered, are remedied, so that there should be no duplicate Item Numbers in the bibliography.)

Take note that Item Numbers are not in sequential order within any part of the bibliography. While they were sequential when the first state of the Internet Edition appeared on the Grand Canyon Association website in 2000, all subsequent additions have been made as inserts into THE GRAND CANON. Thus the numerical order of item numbers within each part is now random.

Actual enumerations applied after 1999 roughly (but not precisely) follow the chronology of additions to the bibliography; that is, higher numbers are later additions.

Cross-Listings to Print Editions of the Grand Canyon—Lower Colorado River Bibliography

THE GRAND CANON includes cross-listings to its earlier print first and second editions: Grand Canyon Natural History Association Monograph 2 (1981), and Grand Canyon Natural History Association Monograph 8 (1990) with its Supplement 1 (1993). The formats of cross-listings here and online differ, as is discussed below. Online the cross-listing notes “Mon. 8”, with a pertinent page number; herein the cross-listing is less ambiguous. Monograph 2 is not cross-listed online.

In THE GRAND CANON cross-listings to Monograph 2 are straight-forward, citing listings by page number (for example, |cited»GCNHA Monograph 2: page 42|. The user who follows these cross-listings will also note corrections (some of them significant), how later emendations have expanded many citations, and that many were reassigned to other parts of the bibliography.

Cross-listings for page numbers from Monograph 8 reflect the individually numbered parts of that monograph (for example, “page 1-66” indicates part 1, page 66). Note also that the pagination includes the continuation of page numbering for each part from the 1990 edition to “Supplement 1” of 1993 (for each individually paginated part of the bibliography, the Supplement continued the pagination of each part). [See Appendix to Part 1 herein for collated pagination sequence and tab placements for 1990 edition and Supplement 1.]
The cross-listings to *Monograph 2* and *Monograph 8* are incorporated into the *THE GRAND CANON* as a means to indicate citations that had appeared in the print volumes, before the bibliography went online in 2000. The different parts of the bibliography have been completely rearranged and expanded from the outline of the printed volumes. This does not mean that the citations are precisely as they appeared in the print editions; many citations have been edited or corrected since first being published. Cross-listings to *Monograph 2* have never before been implemented in this bibliography; they are incorporated for the first time in *THE GRAND CANON*.

In the Internet Edition of 2000 to present, the former style of abbreviated notation is used; for example, >Mon. 8: 1-66<. Unfortunately, this has been confused by some librarians who mistakenly infer in the haste of their busy duties that the notation pertains to a separate pagination scheme and that the publication there cited is, in some fashion, a “Monograph No. 8” in an unspecified series, thus pages 1-66 therein. In order to avoid such misperceptions, I have revised the citational style for these cross-listings. To avoid confusion, the cross-references to *GCNHA Monograph 8* are now, in *THE GRAND CANON*, fully spelled out and placed between arbitrary vertical bars (|) with additional disambiguating note (for example, |cited»GCNHA Monograph 8: page 1-66|).

Also take note that in the original compilation for the Internet Edition, I had marked these notations between outward pointing brackets, such that the notation in the example above appeared as <Mon. 8: 1-66>. But, in as much as the < and > characters are, in that order, reserved characters in HTML markup to enclose code tags, the brackets were reversed for use in the online bibliography in order to avoid the conflict (for example, >Mon. 8: 1-66<). In *THE GRAND CANON*, now, the cross-reference is unambiguously denoted. When this bibliography’s Internet Edition was prepared there were 9,519 instances of cross-references to Monograph 8, which now should be considered an approximation because oversights may have occurred and citations have been subsequently deleted or merged. ✿ ✿ ✿

**Cross-Listings to Standard-Reference Lists**

In the field of bibliography there are many standard-reference lists to which scholars and booksellers, as well as bibliographers, refer. The most common of these relate to the bibliography of American history, or some part of it. These reference lists usually have the advantage of uniquely enumerating each of the citations, and it is by these numbers that the titles are referred in published literature and correspondence.
The Internet Edition of this bibliography cross-lists its citations to several annotated bibliographies; these are:

Francis P. Farquhar (1953), *The Books of the Colorado River and the Grand Canyon: A Selective Bibliography*

David M. Goodman (1969), *Arizona Odyssey; Bibliographic Adventures in Nineteenth-Century Magazines*

Wright Howes (1962), revised, enlarged edition of *U.S.iana (1650–1950); a Selective Bibliography in Which Are Described 11,620 Uncommon and Significant Books Relating to the Continental Portion of the United States*

Colton Storm (1968), *A Catalogue of the Everett D. Graff Collection of Western Americana*

These titles were selected for their renowned authority and wide use, for the special precise and ancillary bibliographical data they convey, and for their annotations.

This bibliography also includes cross-listings to some booksellers’ catalogues, *viz*, Five Quail Books (for 1987–2011), and Guidon Books (1969). The one by Guidon Books is an important early list of publications relating to this region. That the catalogues also list prices provides some added utility as documents of econometric bibliography. Listings for Five Quail Books *Catalogue 18* and afterward are not included in the online version of the bibliography, inasmuch as the number of emendations required to add them to the Internet Edition became far too much for one person’s time. However, *THE GRAND CANON* does include cross-listings to all of the catalogues.

Two additional titles have been included only in *THE GRAND CANON*, not in the Internet Edition: 1) Mike S. Ford’s 2003 half-century sequel to Farquhar, titled, *The Books of the Grand Canyon, The Colorado River, The Green River and The Colorado Plateau; a selective bibliography*, and 2) Marcia L. Thomas’s *John Wesley Powell; an annotated bibliography*. Their enumerated citations are omitted from the Internet Edition bibliography because the volumes were produced years after the online bibliography was first prepared and I have considered the effort needed to update both *THE GRAND CANON* and the online bibliography too taxing for one person’s time at the expense of work that continues.
These titles were selected for the special bibliographical data they convey, or, in the case of Howes, which is only marginally annotated, because it is a standard list of publications to which scholars, booksellers, and other bibliographical users and researchers routinely and conveniently refer. Each of these other bibliographies is numerically organized; it is by these numbers that users unambiguously refer to publications in question.

The omission of other notable bibliographies—for example, Yates and Marshall (The Lower Colorado River: A Bibliography, 1974) and Powell (An Arizona Gathering II, 1950–1969; An Annotated Bibliography, 1973)—is intentional because they are not annotated or have insufficient annotations to make a cross-listing to them meaningful as sources of more bibliographical information. This is solely a means of expediting a bibliographer’s work. The information included in these other publications is nonetheless valuable because they relate to materials or regions not covered by THE GRAND CANON. They provide additional worth through their existence as bibliographies; each is another bibliographer’s historical perspective.

The following section fully lists and describes the cross-listings to standard-reference lists used in THE GRAND CANON.

“There is a unity about the Colorado River country that is established by the River itself—always the River. * * * And just as the River has formed the landscape, so has it determined the course of human history within its basin.”

—Francis P. Farquhar

The Books of the Colorado River and the Grand Canyon: A Selective Bibliography (Glen Dawson, Los Angeles, 1953), p. ix
Bibliographies and Catalogues Cross-listed in THE GRAND CANON

In the bibliography, cross-listed items are appended to the end of individual citations using the shortened forms listed in the left column below. This is followed by the numbered listing in the indicated publication. For example:

**Farquhar 17** is no. 17 in Francis P. Farquhar’s *The Books of the Colorado River and the Grand Canyon*

**FQ4:176** is no. 176 in Five Quail Books *Catalogue Four*

**FQ24/1:290A** is no. 290A in Five Quail Books *Catalogue 24, Volume 1*

**Farquhar**

To the aficionado of the Grand Canyon and the Colorado River, “Farquhar” is a household name. Although his was not the first bibliography of the subject, it was the first to provide some critical evaluation usable by bibliophiles and historians. Book collectors and dealers alike use the enumerated entries as a shorthand for unambiguously communicating to their audiences just which title to which they refer. Indeed, Farquhar’s volume is itself a collectible, one which demands increasingly higher prices. While the book is sought by many, its value as a bibliography is shortened both by its arbitrary, admittedly “selective” content and by the passage of time. It is nevertheless the gem among Grand Canyon-Colorado River bibliographies. As with other enumerated bibliographies, the numbered entries are often referred to in catalogues and bibliographical works. (A supplement for 1953-2003 was assembled by Mike S. Ford [see below].) [As an important Grand Canyon–Colorado River bibliography, the Farquhar numbers are listed in bold herein so as to bring attention to them in longer cross-listings.]

**Ford**

As the half-century sequel to Farquhar (above), Mike Ford’s volume continues the classic in the same vein. Typographically it is identical to the Farquhar volume. Unlike Farquhar, however, there are some citations that are extralimital to those of *THE GRAND CANON* and thus are not cross-listed therein (for example, items exclusively about the Green River). [As an important Grand Canyon–Colorado River bibliography, the Ford numbers are listed in bold herein so as to bring attention to them in longer cross-listings.]
The “Five Quail” series of catalogues are among the most useful overview resources on the availability of literature of the Southwest; specifically, the Grand Canyon and the Colorado River. Their purpose as catalogues is both a shortcoming and a strong point with respect to their use as bibliographical resources. They clearly cannot be a comprehensive list of titles because they record only those things that are offered for sale at a given time; but virtually all titles are extensively annotated with the booksellers’ comments—without these the catalogues would not be cross-listed in THE GRAND CANON. The information about pricing is also a useful guide for those interested in aspects of econometric bibliography. Occasional brief, interim catalogues and price lists were also distributed; these are indicated with alphabetical suffixes (e.g. FQ5A). Only those that contain annotations are included in the cross-listings; those that are simple price lists are omitted.

[Dan Cassidy purchased the stock and name of Five Quail Books from Dave Hellyer. During 1995–1999 the business name under Cassidy was Five Quail Books—West.]

[After the Internet Edition of the bibliography had gone online in 2000, I continued to update it with cross-listings to the Five Quail catalogues. By 2001, however, this procedure became too time consuming, so only Catalogues 14–17 have been cross-listed to the bibliography online.]

[In 1999 the business name reverted to Five Quail Books.]

[Beginning with Catalogue 18, *Five Quail Books Catalogues are cross-listed only in THE GRAND CANON.*]

GOODMAN

The brief annotations included with many of Goodman’s citations provide added value to this volume. Although there are errors throughout, the list is still a worthwhile and still the most comprehensive such working reference for all who deal with the subject. As with other enumerated bibliographies, the numbered entries are often referred to in catalogues and bibliographical works.

[N.B.: A few cross-listings to Goodman have likely been overlooked in the addition of pertinent citations in *THE GRAND CANON* between 2000 and the present.]

GUIDON

The very brief annotations to some titles add marginally more usefulness to this catalogue, but it is among the first such dealer’s lists—if it is not the first—about the literature of the Grand Canyon and the Colorado River. The list, as well as the pricing information, makes it a useful companion to the Five Quail catalogues that began in 1987.

HOWES

The title, “*U.S.iana*”, has rightly been looked at with cocked heads since it was first printed in 1954; Wright Howes defends his neological focusing of “Americana” in his foreword (and he clearly was successful in defending it with his publisher’s editors). This is among the most widely used bibliographical reference works used by book dealers; its enumerated citations have become a standard by which dealers and buyers can unambiguously refer to bibliographically well-researched and documented titles. As with other enumerated bibliographies, the numbered entries are often referred to in catalogues and bibliographical works.
STORM

This is as much a “selective” list as is Farquhar’s bibliography. It covers only the contents of one collection of books (however exquisitely comprehensive). Its enumerated, extensive bibliographical annotations make this a valuable reference work for those who have not seen the titles cited therein, or who have need to compare the bibliographical information among editions and printings. As with other enumerated bibliographies, the numbered entries are often referred to in catalogues and bibliographical works.

THOMAS

This is the comprehensive Powell bibliography. It includes all of Powell’s works and ancillary productions as expected, but goes further by adding manuscript and archival sources, photograph collections, map collections, audio-visual works, and Internet resources and digital archives. (In the present bibliography, of course, only those citations that pertain to Powell’s published works relating in some fashion to the Grand Canyon–Colorado River region are cross-listed.)

WAGNER–CAMP

The generous type size used throughout this volume makes this a handsome work, though one does question its lack of economy given its original $150.00 price. The precise bibliographical citations make it the closest substitute for having the title-pages in front of the reader, an approach easily remedied today by digital reproduction. As with other enumerated bibliographies, the numbered entries are often referred to in catalogues and bibliographical works.
About the Nomenclatural Appendix to The Grand Canon:
All the Grand Canyons

Attached to the end of this document are lengthy compilations of literary uses and applications of the term, “Grand Canyon”; specifically, in geographical nomenclature, analogy and metaphor. They pertain virtually in whole to the uses of the term “Grand Canyon” where they do not pertain to the Grand Canyon of the Colorado River in Arizona. The number of places and phrases recorded here dramatically emphasize the tremendous attraction that the Grand Canyon has had on people from the time that the first “other” Grand Canyon was named after it (the Grand Canyon of the Yellowstone). Most examples are informal, yet they have been used and thus I feel should be accounted for as a matter of literary record.

The shortcoming of these lists is that it is impractical to embed the bibliographical citations for each one, particularly since many instances have been captured from the nebula of ephemeral web pages posted on the Internet (which medium is otherwise excluded from this bibliography, as explained elsewhere herein). I previously had simply maintained these photocopied pages and webpage printouts in my personal files, which were delved into for a couple of whimsical publications on the subject (as noted and cited elsewhere herein). However, it did not seem sensible to me to retain the lists in an inaccessible place; and given the venue of The Grand Canon as a documentation of the creative work of individuals I have decided to append them here.

Principal Differences Between The Grand Canon and the Internet Edition

Some users may inquire how The Grand Canon differs from the concurrent Internet Edition online; if there is a difference at all. Every citation in The Grand Canon should be found in the field-searchable Internet Edition—omissions may be the result of inadvertent oversights in the uploading of citations; whether there are any is not known at this time. There are differences in appearance in The Grand Canon, the most noticeable of which is a cleaner, more pleasing and informative typographical presentation through the use of fonts, color and layout. But, as is noted here, there are many inconsequentially small differences, as well as the possibility of citations accidentally not placed online or, conversely, not removed. Thus, as of the date of
completion of this edition of *THE GRAND CANON* it is *THE GRAND CANON* that stands as the definitive version of the bibliography.

The one stand-out difference is that *THE GRAND CANON* is a monographic presentation of the whole bibliography; it is “readable”. With *THE GRAND CANON* one may conveniently browse the whole, individual sections, or contiguous citations; and most importantly, one may browse it to discover those things that may be of special interest or to gather an overall sense of these thousands of writings about the Grand Canyon and lower Colorado River region. *THE GRAND CANON* includes a foreword, preface, preamble, introductory material, essays, special cultural compilations pertaining to the appellation “Grand Canyon”, and an afterword, which are not part of the Internet Edition. But it is not easy to single out specific subsets of citations from the whole monograph.

The Internet Edition is a searchable database. With it one may search for individual author names, strings of information as which appear in citations, and dates. From it customized-search lists can be produced expeditiously. For example, in the Internet Edition one may find the name of an author regardless of where he or she appears in the order of listed coauthors (first, fifth, and so on). One may find, for example, all publications that appeared in 1883, or between 1858 and 1919. One may find all publications whose dates of publication are unknown. Or one may find all articles that appeared within one periodical (or, with different search parameters, articles in a given periodical within a specific date range, and/or written by a certain person). These are the kinds of searches that are not possible in the monographic format, at least not without a very time-consuming and methodical search and tally through the entire work. But it is not easy to see the whole in the Internet Edition, or to browse the whole.

So, *THE GRAND CANON* and the Internet Edition are distinctly different approaches to the same set of data. Each is indispensable in its own way.

Inasmuch as some inherent software limitations in the Internet Edition, inherited from the late 1990s, preclude global editing online by the compiler, some sweeping edits have been made *THE GRAND CANON* that are not present online. For example, I have made consistent all references to “new series” and “series” numbers in the citations for some periodicals (that is, those runs that saw multiple series). I have also made consistent numerous other points in citations that are simply matters of proper editing that should not be considered as corrections to content.
There are, though, numerous minor edits to citations that, for the sheer number of them and the limitations of the compiler's time, have not been made online; many are corrections to inconsequential typographical errors (all corrections to author names and proper nouns have, however, been made online consistently). Many more modifications to the information contained in citations have been made; none subtract from the information in the Internet Edition, but they produce a complete citation that I think is more proper, certainly more preferable. And numerous minor points and adjustments have been made that have no significant bearing on the content of the same citation in the older ones in the Internet Edition. Obviously, the most recent citations herein reflect perfectly in the Internet Edition, since these citations are uploaded online from THE GRAND CANON.

The inclusion of numerous more cross-listings to previous print editions and to standard-reference lists, beyond those that appear in the Internet Edition, greatly enhances this utilitarian function of THE GRAND CANON. The manner in which the cross-listings to the print editions has also been emended in THE GRAND CANON (following on reasons explained elsewhere herein).

Again, the great number of minor “tweaks” that are not reproduced in the the Internet Edition is due to the limitations of time. I find it no longer a conscionable expenditure of time to recreate every small adjustment in the Internet Edition; that it is better to maintain the “authoritative” version in THE GRAND CANON.

Another significant difference between THE GRAND CANON and the Internet Edition is the disparity of the number of citations listed in each of these venues; there are, at least at this time, several hundred more citations in the Internet Edition. This is due to the presence there of items that no longer are part of THE GRAND CANON but which were a part of the original 2000 posting of the database. Due to software limitations it will be labor-intensive to remove them from the Internet Edition; for now they remain there. Two parts of the bibliography are no longer present and which only partially have been removed in the Internet Edition: Part 33 (“Other” Grand Canyons) and Part 34 (Miscellaneous Manuscripts). As explained elsewhere herein, Part 33 was discontinued as a bibliographical list but is now greatly expanded and reformatted as an addendum to THE GRAND CANON in “THE BIGGEST MIRROR”. Although Part 34 was removed entirely online, due to working limitations with the online database the citations for Part 33 still remain in the database even though they are no longer present in THE GRAND CANON.
Not reflected in the count of citations in the Internet Edition online are more than 150 citations in Part 31, Newspaper Guides, which due to the summary nature of the citations are not included in the online database.

None of thousands of very minor adjustments in THE GRAND CANON are substantially important to the bibliographical accuracy of the citations as presented in the Internet Edition. For overall precision, though, THE GRAND CANON is the document of record; the “official” version if you will, an arbiter for points of discussion.

†  †  †

† IDEAS FOR CONTINUED WORK

THE GRAND CANON can provide foundations for all kinds of ambitious and utilitarian works beyond its immediate purpose of documenting past activities.

1. There is certainly a need for a database of citations organized in such a way that it is a comprehensive index to all pertinent subjects within every publication. Although such organization would be only as powerful as the competency of those who create it and the number of usefully indexed entries, its overall value would be immense. THE GRAND CANON can serve as a foundation for such a comprehensive work: the groundwork has been laid through the compilation of the sources. One has only to peruse them and work accordingly. Those which I have not collected myself can be found.

2. Expanding on the idea of a comprehensive subject index is a truly comprehensive index to the content of everything that is cited in THE GRAND CANON, much in the fashion that a book’s index serves as a register of material contained in it. This, of course, would be a prodigious task; one that would probably be accomplished only through automation at least on the first pass. It would require the existence of digital copies of all publications, a resource set that does not now exist. Yet there may be reason to expect that the creation of such materials will be an easier process than we today may imagine.

3. Compilers of anthologies may do well to use THE GRAND CANON as a source by which to identify works that are beyond those collected (again and again) for a Grand Canyon or Colorado River anthology.
4. More closely focused bibliographies (simple or complex) can be created by excerpting citations from *THE GRAND CANON*. For example, for the geographical region covered by *THE GRAND CANON* one may create a bibliography restricted to the science of entomology. Or, one may use this work to create a separate bibliography that focuses only on the lower Colorado River below Grand Canyon, subdivided into subject areas in the same fashion as is *THE GRAND CANON* as a whole.

5. An annotated bibliography would take *THE GRAND CANON* to far greater usefulness. An annotated bibliography of one subject area may also use *THE GRAND CANON* as a foundation.

6. Expanding on the previous suggestion, one may consider using the citations within *THE GRAND CANON* to serve as digital links to digitized copies of the works there cited. Whether selections would be made from the citations, or a massively comprehensive digital library were to be assembled, are logistical and financial considerations.

7. A thorough examination of some very pertinent serials is in order. For example, the entire runs of *The Deseret Weekly*¹⁰², *Arizona Highways*, *Desert Magazine*, *Sunset Magazine*, *Santa Fe Employes’ Magazine/Santa Fe Magazine*, and other regional and specialized serials should be examined against this bibliography to list everything that may relate to the Grand Canyon and lower Colorado River region. Likewise the special exception to the exclusion of newspapers in the citation of items from the *Deseret News* (Salt Lake City) through 1910 would do well to continue the effort to the present. Specialized serials should likewise be selected and searched consistently; for example, *Engineering News-Record* or various early railroad journals will likely contain far more items pertinent to engineering projects in the lower Colorado River region, specifically dams and irrigation works. Other specialized works, like the annual reports of The Atchison, Topeka & Santa Fe Railway Company, likewise will have information that has not as yet been found for this bibliography. In addition, important government serials, most notably the *Federal Register* and *The Congressional Record* should be searched in their entireties. (With regard to the *Federal Register*, some searches of the years since the mid-1990s to date have already been effectual with the online availability of issues from these years. *The Congressional Record* has not thus far been searched.) I have not found everything because, except for a very few titles, I have not been able to examine very many whole runs, contiguously. In fact, many serials would likely benefit from such a conscientious comparison.

---

¹⁰² Many runs of Utah newspapers are now available online at [http://digitalnewspapers.org](http://digitalnewspapers.org).
8. This bibliography’s coverage of legislative documents (other than the Federal Register just mentioned) is a fortuitous gathering only. There is certainly a huge body of material that can yet be listed from federal and state records alike. These items would include legislative bills, hearings, laws, and in fact everything that one may consider a part of legislating—all surely a daunting task to compile.

9. Standardizing author names would be worthwhile, even though in some instances the fashion in which an author’s name appears will differ from the way in which it is displayed in a given document (full names substitute for published nicknames, for example). Examples of standardization will be found in the Library of Congress’s “Authorities” files. Sometimes, an author’s given names are spelled with initials, other times spelled out. I have tried at least to standardize those kinds of variations under fully-spelled headings; exceptions may be found with some authors who consistently publish their names only with initials and by which they are also known (for example, P. T. Reilly, whom few would know as Plez Talmadge Reilly). Occasionally, one will notice that an author’s full name is spelled out (usually three names). This is done, of course, when they publish their name as such, but it also appears in a list of productions when the author was encountered for the first time through their academic thesis or dissertation. Then, as they continue to publish and their works are extracted for this bibliography, the completely spelled name is retained as the header even when the author may never have used it in later publications. In THE GRAND CANON overall, I have conscientiously considered that it is the document that arbitrates the citation, less so a derived system of styles; because what I have recorded here is the work of individuals, agencies and institutions as they were presented.

10. There must be hundreds—more likely thousands—of articles and books wholly and partly about the Grand Canyon and lower Colorado River region that have been written in languages other than English. Hundreds of non-English citations do appear in THE GRAND CANON, but intuitively and logically there must be myriad more that have escaped all manner of public indexing, web-posting, and serendipitous discoveries by me and contributors. Finding foreign-language articles in serials and journals, particularly those products that are elusive in libraries of the western world and which are written in non-Latin alphabetic schemes, will be tremendously challenging work. Those which appear in THE GRAND CANON must be considered a sample only.

103 There are printed catalogues, too, but the Authorities specifically may be viewed online at http://authorities.loc.gov.
11. Manuscript and archival holdings are unique resources. However, because they exist mostly as single copies in one location (copies of these materials may also exist as a matter of user-copy production policies or microfilming), they are not as conveniently available as are published materials that can be obtained in a number of places or through inter-library loan services. A separate guide to these resources would be a boon to researchers.

12. The bibliography has to be extended to the upper Colorado River basin if there is ever to be a proper bibliography of the Colorado River-proper or the Colorado–Green River basin. Even if such a bibliography is restricted to the human history of the rivers-proper, there is need for such a compendium of literature.

Given the amount of time that I must dedicate to the existing bibliography as well as to other avocations and daily responsibilities, and due also to the limitation of the length of life, few, if any, of these recommendations are likely to be pursued by me.

This bibliography can further serve as the source material for illustrative works of the Grand Canyon and Colorado River. A comparative compendium of illustrations redrawn from earlier ones has yet to be produced. The illustration at left was imaginatively redrawn from one of F.W. von Egloffstein’s scenes from the 1858 Ives expedition (see page xiii herein); this one with the river and boater added as well. Note also the greatly exaggerated incision of tributary canyons.

Pseudonyms and Psychonyms

The following known pseudonymous authors appear in *THE GRAND CANON*. Citations of published works are listed by the names under which they were published; actual names are usually given in square brackets. Separate notes for this table appear at the end of the table.

1 This is the origin of the other variants of the “C.V.” pseud- and psychonymous uses originated by Quartaroli; it derives from the scientific name of the Grand Canyon rattlesnake, *Crotalus viridis abyssus*. Some other uses likewise derive from the scientific names of animals or are contrived based on Quartaroli’s original usage.

2 Pseudonym used in an anonymously produced, pirated version of The Personal Narrative of James O. Pattie, of Kentucky (Pattie, 1831 ff).

3 As with the “C. V. Abyssus” pseudonym, with which this pseudonym appeared, it derives from the scientific name of an animal well known at Grand Canyon; in this case the raven, *Corvus corax*. “Early” is a nick-name for Earle Spamer, originated unwittingly by a worker at Glen Canyon Environmental Studies during the 1990s and which was adopted and perpetuated by Quartaroli.

4 “Phoenix” is a pseudonym frequently met in literature. Although the authors, “Phoenix”, cited in this bibliography are undetermined identities, there also is the more well-known (but hitherto uncited herein) “John Phoenix” who was Lt. George H. Derby (who is cited in this bibliography for his naval survey work on the lower Colorado River). Derby was humorist also, who wrote under the additional names, John P. Squibob and Professor John Phoenixiana among others. See the biography in Item no. 2.10162, herein.

5 Unintentional; an editorial(!) misspelling.
Names changed by marriage, divorce or legal decree

The people listed here are those individuals who are cited in *The Grand Canon* only by *both names*. Marriage names may also represent hyphenated compound names using both birth and marriage names; for each such case these are as used by the woman in her publications. Cases where a marriage name precedes a birth name indicate divorces after which the woman reverted to her birth name. The time frame used is that of the publications.

</table>
This list itemizes more than 5,000 titles of periodicals and serial publications cited in *The Grand Canyon*. That a title appears in the list by no means implies that the entire series has been examined. Almost all titles are added opportunistically; many serial titles in this bibliography are limited to single citations. Some principal serials that pertain to the Grand Canyon and the Colorado River have, however, been canvassed in their entirety; for example (but not limited to), *Boatman’s Quarterly Review*, *Colorado Plateau Advocate*, *The Confluence*, *Grand Canyon Footprints*, *Grand Canyon Nature Notes*, *O’Pioneer/The Ol’ Pioneer*, *Plateau*, and *The Waiting List*.

Serials posted only as Internet web pages are generally omitted from this bibliography, due to their ephemeral nature. Principal exceptions are *Canyon Sketches eMagazine* from Grand Canyon National Park and *Grand Canyon River Guides*, an electronic newsletter distributed by the organization of the same name.

Titles are listed in the format used by this bibliography. Some foreign-language serials are listed in transliteration. For those that are house serials incorporating the names of institutions, organizations, and agencies, the name of the originating entity usually appears first, followed by the series name, much in the way the titles will be found in most library catalogues. For example:
Proceedings of the Academy of Natural Sciences of Philadelphia
is listed as
Academy of Natural Sciences of Philadelphia, Proceedings

or:
Graduate Magazine (the alumni magazine from the University of Kansas)
is listed as
University of Kansas, Graduate Magazine

For titles that change over time, permutations cited in THE GRAND CANON reflect the titles of the time of publication. Differences in spelling also reflect contemporary uses of the name, as cited. Capitalization of serial titles is done according to English or American styles as proper names, not in the styles of the originating languages.

Explanatory information, when deemed necessary for clarity, or as a means to further identify the creator of a more obscure title or the place of publication of a little-known serial, is given in *colored parenthetical italics*, although pragmatically such information is not uniformly applied (a task unto itself).
PERIODICALS AND SERIALS CITED

Numerals in the left column are informational counters only; they continually change as new titles are added to this list and so relate only to the present edition of THE GRAND CANON.

“The Grand Cañon at the Foot of the Toroweap—Looking East.”

PERIODICALS AND SERIALS pass through name changes either through organizational changes or the whims of editors and committees. A few periodicals cited in THE GRAND CANON have gone through some name and frequency changes, or they have interjected “special issues” in their series, which have posed some problems in tracing the bibliographical lineages of these serials. These problematical titles are itemized here. The selection is, however, restricted to series that are significant, Grand Canyon/Colorado River-focused titles.

Other periodicals, not listed here, have gone through name changes as a normal process of business, without a change in volume numbering; for example: National Geographic Magazine becoming National Geographic; National Parks and Conservation Magazine becoming National Parks; and Field Notes (National Audubon Society) becoming American Birds.

For a listing of more than 5,000 periodical and serial titles that appear in THE GRAND CANON refer to the list of Periodicals and Serials Cited.
Salton Sea Update

Unnumbered
Frequency: irregular
Responsibility varies:

[National Park Service, Grand Canyon National Park]

10(1)–[current], Fall 1994–[current]  
Frequency: quarterly, 10(1)–14(4) [vol. 10, nos. 1, 2 only]; semiannually, 15(1)–[current]

Although *Nature Notes* is intimated by volume numbering to continue *Grand Canyon Nature Notes*, take notice of the difference in both the title and imprint. The “continuation” of this serial as *Nature Notes* is produced by the National Park Service at Grand Canyon National Park, although it does receive support from the Grand Canyon Association.

The original series was published partly under the auspices of the National Park Service, when the Grand Canyon Natural History Association was partly supported by the work of NPS employees. Today, cooperating associations in the parks are not-for-profit organizations that independently assist the educational and interpretive missions of the parks they serve; NPS employees do not participate in the administration or routine functions of the cooperating associations. However, the cooperating associations as entities may contribute support to the non-administrative operations of the national park.

National Park Service

[Detail from Grand Canyon National Park brochure (Government Printing Office, Washington, various dates)]
For more than a century, bibliographical listings have accounted for publications about the Grand Canyon and the Colorado River. The earliest lists did not focus on these regions except within larger compilations; for example, a bibliography about Arizona. They were modest achievements primarily because they focused on the major and most interesting productions then available—when of course there also were fewer of them. They cited what even then were iconic works, which at the time were not so old as we view them now, and newer works that were in those days part of current-literature lists. Even after the creation of the National Park Service in 1916 and the raising of Grand Canyon National Monument to national park status in 1919, no special efforts were made to establish a comprehensive bibliographical understanding of what had been written about the Grand Canyon, or for that matter any of the national park units. It was not until the Depression era of the 1930s, and government-funded jobs programs like those of the Work Projects
Administration which helped raise civilian morale and national economy, that more serious efforts were made to produce something comprehensive.

**Earlier General Bibliographies for the Grand Canyon and the Colorado River**

The bibliographical listings in **PART 1** of *The Grand Canon* contain bibliographies and similar fact-finding compilations like indices. One will find there numerous Grand Canyon–Colorado River lists. Some are inclusions in larger works; others are mimeographed or otherwise inexpensively produced documents with relatively limited distribution. They all are traditional in scope; usually the forms of the citations they contain are not terribly comprehensive, sometimes lacking in precision that makes the task of locating copies of items more difficult.

Ignoring many special-interest bibliographies—for example, geology, botany, or ornithology—the chronological listing of more general bibliographies below tells a story of ambitious and broad projects. This selection of works include titles that relate to the Grand Canyon or the Colorado River even though in many cases the substantive part of the bibliography may be more broadly “Arizona”, or an even greater geographical expanse, containing far more citations about other aspects of the state or region that are extralimital to **The Grand Canon**. Some of them, however, include specially itemized sections for either or both the Grand Canyon and the Colorado River.

The list farther below is informative for what it does not contain. Only a couple of the products offer an accounting as comprehensive as possible specifically for the Grand Canyon. The majority of products are cursory or repetitive in their coverage of the locales of interest to **The Grand Canon**; all of them including mostly the same material, with minor differences or due to the default of chronological updating. Even when the Grand Canyon is specially cited in these earlier works, focuses are still on the national park, which at the time had significantly less acreage than it has today. By intimation they included the whole of the physiographic canyon, of course, but the selective focuses were based on the political unit. Furthermore, those works that specially listed citations relating to the Colorado River more often embraced the entire river basin (**The Grand Canon** is restricted to the Lower Basin).

A 1919 National Park Service bibliography for the new Grand Canyon National Park, included in the Department of the Interior’s annual report, is a patchwork compilation of the “usual” stand-outs; for example, the iconic exploration and research
monographs of J. C. Ives (1861), J. W. Powell (1875), and C. E. Dutton (1882), and a selection of magazine articles that seems to have been collated more fortuitously than from careful research (that is, whatever was at hand). Even though the Grand Canyon was then a newly established national park, the canyon had long been a national destination for travelers and researchers. Legally protected variously as a forest reserve, game preserve, and national monument, the Grand Canyon was a de facto national park for some years before its formal designation. As demonstrated by citations in THE GRAND CANON here, the Grand Canyon was already broadly published with exhaustive attention, which makes the 1919 official list all the more peculiar for what was selected to be in it.

Hazel Voth and Harold Gill’s 1939 production, Grand Canyon National Park; A Bibliography was the first serious attempt to compile a Grand Canyon bibliography, the result of work done with the cooperation of the Work Projects Administration and the Civilian Conservation Corps. Typewritten and mimeographed for distribution, its 114 pages centered on the National Park Service unit, but by the nature of the contents of the works cited it unavoidably, and preferably, embraced a much larger portion of Southwest landscape and history. It was the first openly “official” bibliography about the canyon and the river from the perspective of the National Park Service; thus it was the first such administrative bibliographical tool for the park.

The list that follows, selected from PART 1 of THE GRAND CANON, is a chronology of basic, non-specialized reference works that precede or are contemporary with the editions of THE GRAND CANON; there are numerous others that have special topical focuses, as one will see by examining Part 1. These works, compiled for different purposes and audiences, are nevertheless the principal productions on which generations of researchers and administrators have relied; just a few were created after the start of THE GRAND CANON in 1981. Inserted into this chronology are my comments on them, and a chronology of earlier work on THE GRAND CANON.

*Very limited coverage for the canyon and river, though restricted to the holdings of one institution.*

*This is the first compilation specifically for Grand Canyon National Park, although it is limited in scope.*

*Focused on the holdings of one library.*

*Limited in scope to the international issues surrounding the use of the lower Colorado River and its diversions for agriculture and power production; an early representation of government-sponsored bibliography for this region.*

*The first water-supply bibliography for the Colorado River, focused on and coincident with the construction of Hoover Dam.*

*The first comprehensive bibliography for Grand Canyon National Park and probably the definitive work for decades thereafter.*

*The Grand Canyon portion is in large part probably based on the 1939 work by Voth and Gill.*

1993  ["Supplement 1" to the second edition of Earle Spamer’s Bibliography of the Grand Canyon and the Lower Colorado River (Canyon Natural History Association, Monograph 8, Supplement 1).]  [No more “Supplements” were produced in this series.]

2000  [The digitally searchable “Internet Edition” of Earle Spamer’s A Bibliography of the Grand Canyon and the Lower Colorado River, first posted online on the Grand Canyon Association website. It is frequently updated thereafter.]

The important sequel to Farquhar’s 1953 volume; in precisely the same vein.

Indispensable for studies about the man and his work, embracing far more than his celebrated exploits on the Colorado River.

Contains lists of Internet website links. An interesting item that should be useful in tracking the extinction rates of these selected online resources for the Grand Canyon. (While such items are useful for their currentness when published, they are not useful for retrospective documentation such as may be required in management issues and administrative affairs.)

2011  [Trial version of The Grand Canon informally distributed by Earle Spamer in February; the so-called “Comprehensive Edition”.

2012  [First edition of the new bibliographical series, The Grand Canon, reinstituting the monographic version of Bibliography of the Grand Canyon and Lower Colorado River and providing extensive new features.]

In this list one sees that there have been few efforts to very comprehensively document research and creative works that relate to the Grand Canyon and Colorado River. But there have been numerous efforts to produce selected lists, which for their utilitarian uses and with few exceptions they did not expect broad dissemination.

Part 1 of THE GRAND CANYON further lists many bibliographies and indices that specially focus on one or another precise topic that relates to these areas. One example is Goulet and LaGory’s 2009 extensively annotated bibliography on the humpback chub\textsuperscript{104}, a Colorado River fish whose limited Grand Canyon habitat is

\textsuperscript{104} C. T. Goulet and K. E. LaGory, Annotated Bibliography for the Humpback Chub (Gila cypha) with Emphasis on the Grand Canyon Population (Environmental Science Division, Argonne National Laboratory, Argonne, Illinois, for Western Area Power Administration, Colorado River Storage Project Management Center, Salt Lake City, Utah, 1990), 236 pp.
endangered by the river’s flow regime as influenced by the operation of Glen Canyon Dam, just upstream from the Grand Canyon. This work was produced for the Western Area Power Administration by the Environmental Science Division of the Argonne National Laboratory. It obviously serves as a comprehensive guide to previous research for those working on environmental studies of the fishes of the Colorado River in Grand Canyon, comprising a review of the scientific and administrative literature on the subject. However, in terms of its primary purpose, it was produced in response to administrative needs of WAPA, the operating entity for power production and distribution in the West, including Glen Canyon Dam. Thus, a bibliography can serve both a widely interested audience and function as an informational guidance document for resource managers and administrative professionals; and it feasibly can be used as a summary document in matters of legislative action and judicial opinion.

THE GRAND CANON is not an annotated bibliography even though many of its citations include notations that move in this direction. It can, however, be used to produce a fully annotated bibliography, with appropriate editorial comments, either of the whole or for selected components. Similarly, this bibliography can be excerpted to create more focused bibliographies for any number of purposes.

Comparable Current Bibliographical Productions for U.S. National Park Service Units

THE GRAND CANON is the descendant of previous bibliographies and is the source document for the ongoing Internet Edition, *A Bibliography of the Grand Canyon and Lower Colorado River*. It has been independently compiled since 1974; and since 1981 the bibliographical project has been supported through publication, distribution, and web access by the Grand Canyon Association, a cooperating association with Grand Canyon National Park. The content of the bibliography, however, has been wholly my responsibility, with the added benefit of various contributors of citations who are cited in various Acknowledgements.

The online bibliography is freely accessed. Its earlier print editions were distributed as part of the Association’s *Monograph* series, most of which had been distributed *gratis* as a service to academic institutions and individual researchers. In this way the bibliography furthers the Association’s mission to “benefit Grand Canyon National Park” and to provide “premier educational opportunities about the natural and cultural history of the region”. In so doing it also provides a research tool to the park’s administrative and interpretive staffs. Grand Canyon National Park’s website
also includes links to the Association and to the bibliography, something that, as is explained below, is still a unique public service within the National Park System.

The focus of this survey is on printed or web-based access to bibliographical resources about individual, politically defined and geographically restricted National Park Service units. During the research done toward this study, comparisons were also made in more general fashion with similar governmental units charged with the land, resource, and site management. These other (non-Park Service) governmental units consistently show less attention to bibliographical resources in public venues, even as compared to the attention given these resources by National Park Service units, thus the attention here on the Park Service. This in itself is telling; that the National Park Service has continuously demonstrated at least a perfunctory acknowledgment of the research and administrative values of bibliographies.

The bibliographical resources searched for are those that may be available through publication under government or affiliate imprints, or posted directly to the units’ websites. The aim here is to identify those units of the National Park Service that have themselves produced, promoted or cited accountings of publications that relate to those units through either print references or their websites.

As noted, THE GRAND CANON extends its coverage beyond Grand Canyon National Park, embracing lands overseen by numerous other agencies of federal and state governments as well as Native American and privately-owned lands. Yet as a whole it serves to document the works about a unique, conterminous landscape, its resources and peoples. Only conceptually it is all awarded to the Grand Canyon and the Colorado River, but nonetheless the search for comparable bibliographical coverage, past or present, has likewise been extended to the entire region, its administratively overseen parts at federal, state, and similar levels of oversight. The search has been to identify, specifically, those research tools that function in the same fashion as THE GRAND CANON.

It seems incongruous that other than THE GRAND CANON no comparably robust and broadly accessible current accounting of publications has been found for any other unit administered by the National Park Service or other federal public-lands agencies. One might assume that certain National Park System units—two high-profile examples are Gettysburg National Military Historical Park and Independence National Historical Park, both highly visited areas each with a long history of detailed scholarship and popular writing—would have tremendous bibliographical research resources readily available to the public at large; not just on-site at these units’ research centers but widely, through publication or website posting. Thus far none have been identified. Scholars can produce citations that will inform users of
numerous exceedingly well-documented bibliographical compendia for locations such as these\(^{105}\), perhaps even some annotated and critical overviews of existing literature on the specific historical fields on which they focus. It is quite a different thing, though, to find bibliographies that cover all subjects for a geographically delimited service unit or for a geographical region embracing it.

There are separate, detailed resource reviews that are “off the radar” of traditional bibliographies, too. One such item (found randomly) is geographically close to but out of scope with *The Grand Canyon—An Overview of the Cultural Resources of the Western Mojave Desert*\(^{106}\), which is particularly interesting because it also describes a detailed literature-search project. Surely many more similar productions of lesser or greater ambition are available for discrete geographical areas like that covered by *The Grand Canyon* or the Western Mohave Desert project; however, they are not easily identified or adequately advertised, nor are they usually noticed for awards. The second edition (1990) of *Bibliography of the Grand Canyon and the Lower Colorado River* received an Award of Honorable Mention in Publications in the 1991–1992 National Park Service Cooperating Association Publications Competition.

Bibliographies that relate to national parks in general, or national parks of particular regions of the country, are also commonly found. They contextually overlap with the kind of coverage provided by bibliographies that pertain (or would pertain) to specific Park Service units.

The only comprehensive bibliographical tool that approaches *The Grand Canyon* in scope and content is the *Greater Yellowstone Bibliography (GYB)* online, hosted by

---

\(^{105}\) For example, a masterful bibliography of the Gettysburg military campaign (as opposed to all things about today’s Gettysburg National Military Historical Park) may be seen in Richard Allen Sauers, *The Gettysburg Campaign, June 3–August 1, 1863; a Comprehensive, Selectively Annotated Bibliography* (Greenwood Press, Westport, Connecticut, 1982). For the second example, it seems superfluous to select a similar kind of bibliography for Philadelphia’s Independence National Historical Park or its historical events given the proliferation of Colonial-era reference works that are available. However, of particular note is an 8,000-item unpublished bibliography that was assembled by 1953 for restoration work on Independence Hall, although it included large numbers of manuscript materials and citations from photographic archives. That was a prodigious work, one which is representative of many of the types of resources that may be available for select park units. (Information on the Independence Hall work from Constance M. Greiff, *Independence; the Creation of a National Park* (University of Pennsylvania Press, Philadelphia, 1987.) Nonetheless, Independence National Historical Park still lacks an all-encompassing and current master bibliography from its easily accessed resources such as those examined here.

the University of Wyoming Libraries. The website indicates that the GYB was last updated in 2001 and “contains over 28,900 bibliographic citations to scholarly, popular, professional, and creative literature about the greater Yellowstone region of Idaho, Montana, and Wyoming”. But the structure and function of the Yellowstone production differ greatly from those of THE GRAND CANON. Users interact with it only through a single webpage, its search screen. Queries parse citations only as lists of links to individual catalogue records; the search returns cannot be printed or downloaded as a set of citations such as returned by the online Grand Canyon bibliography. GYB adds some photographs and descriptions of artifacts, although no special effort has been made to be comprehensive. There are no earlier versions of the Yellowstone production available in printed format, and neither Yellowstone National Park nor the Yellowstone Association sponsor the GYB. Supplementing the Yellowstone work is the administratively-focused Management of the Greater Yellowstone Ecosystem; An Annotated Bibliography, which, again, is not a production of either the park or its cooperating association.

A comparison of A Bibliography of the Grand Canyon and Lower Colorado River online and the Greater Yellowstone Bibliography as they were displayed in 2012 follows.

108 Tim W. Clark (project manager and contributor) and Ann H. Harvey (editor and contributor), Management of the Greater Yellowstone Ecosystem; an Annotated Bibliography, 2nd ed. (Northern Rockies Conservation Cooperative, Jackson, Wyoming, 1999), 92 pp., maps.

**Notes**

A The Greater Yellowstone Bibliography is, in terms of breadth of coverage for a geographical area related to National Park Service units, the closest comparable online bibliography to A Bibliography of the Grand Canyon and Lower Colorado River. Information for these bibliographies is current to April 2012.

B The number of items in the Grand Canyon–Lower Colorado River bibliography is taken from THE GRAND CANON, but the opening webpage for the GC–LCR bibliography still counts several hundred additional citations that are no longer present in THE GRAND CANON; the disparity is explained elsewhere herein.

C Searches in the Grand Canyon–Lower Colorado River Bibliography are Boolean “AND” searches; they return only the citations that meet the conditions specified by the content entered into any number of search fields (thus for example, a search for author “Dutton” and keyword “Tertiary” will return only those citations by Dutton that
have "Tertiary" in the search field). Searches by default also return citations that meet plural and grammatically similar words to those entered in a field.

Searches in the Greater Yellowstone Bibliography are Boolean “or” searches; they return citations that meet all of the conditions specified by the content entered into any number of search fields (thus for example, a search for author “Lincoln” and subject “fumaroles” will return all citations authored by “Lincoln” *and* all citations relating to “fumaroles”).

**D**

Keyword searches in the Grand Canyon–Lower Colorado River bibliography search any part of the citation; wildcard characters may be used. Keyword searches will return only those words that are part of the original citations; this is not a contrived “subject” field.

**E**

In the Grand Canyon–Lower Colorado River bibliography, Subject Area allows user to restrict searches to any one of 32 separate parts of the bibliography (see [Content Guide](#) herein for their descriptions). (The default search method searches the entire bibliography.) User-selected words or strings will be returned only if that information is included somewhere in the full citation; there is at this time no separately contrived “subject” field in this bibliography.

In the Greater Yellowstone Bibliography, Subject Keywords are restricted to key words contrived by the compilers and placed within a separate “Subject Keywords” field of the database, although it will also search by default in the “Title” field.

**F**

The default chronological search parameter for the bibliography is “all”. Searches may be restricted to year ranges or single years by changing the values in the beginning- and end-year fields; leaving the beginning-year field blank and the default current year in the end-year field (the default setting) searches the entire database. Specific searches for only citations with “no date” or dates undetermined may be conducted by using the adjacent check boxes.

**G**

Although not immediately discernable to the online user, the Grand Canyon–Lower Colorado River bibliography may be browsed by leaving all fields of the search screen blank (except the default ending-year field). There is, however, no current capability to jump ahead to citations farther into the list, except by advancing page by page. The number of items returned per page may be changed to any number up to 999. Also, any one subject part of the bibliography may be browsed separately by selecting that part in the drop-down “Subject Area” field and proceeding as just indicated.

**H**

Citations in the Grand Canyon–Lower Colorado River bibliography are cross-listed to the earlier print editions (1st ed., 1981; 2nd ed., 1990 and supplement 1993). Citations are also cross-listed to a number of standard bibliographical reference lists (as explained elsewhere herein).

**I**

See [Editions](#) herein.

---

**Survey.**

A study of resources available for and from National Park Service units across America brings attention to how infrequently bibliographical compendia are assembled, much less promoted, for individual Park Service units. While tried-and-true library catalogues (online today) are one way to search for existing published bibliographies, a newer entranceway is through the websites both of Park Service units and their cooperating associations. Of course, this approach relies upon the administrative arrangement of a unit’s website, whether sufficient time or resources were made available for creating it, and further, whether notice of research aids were made a part of it.

In 2009–2010 I conducted a study of principal bibliographical resources in the National Park System. While this survey will eventually be outdated, it serves as a benchmark for the breadth of publicly available resources during the first years when
the greatly updated online Grand Canyon–lower Colorado River bibliography was available. At that time the National Park Service’s website listed 463 units in the system, from Abraham Lincoln Birthplace National Historic Site to Zion National Park. A few of the individual units with websites had bibliographies of selected references, but more than not these were just suggested-reading lists. Many of the small units did not even have a separate website presence. It will be interesting to renew the survey in the future, to detect substantial responses over time by National Park Service units to the value and utility of comprehensive bibliographical resources prepared by or sponsored by those units on behalf of the general citizenry and Park Service staff and administrators (although perpetually at the mercy of staffing and public funding).

In 2010, fifty-two National Park Service units had cooperating associations affiliated with them; however, only twenty-seven were affiliates of park units that met the criteria for this survey. The purposes of these organizations are to help support the educational, interpretive and outreach services of the units with which they work; most if not all are not-for-profit organizations that are affiliated under memoranda of understanding with the National Park Service. The websites of cooperating associations (if any) were also searched for online bibliographical guides or references to available guides. Grand Canyon Association was the only one with either a master bibliography or a link to one created by another organization. (Even the Greater Yellowstone Bibliography cited above was not mentioned on the websites for the park or its cooperating association, although in 2010 the park website included a more general link to University of Wyoming Libraries data sources.)

The survey, summarized below, includes information on published bibliographies that were derived from databases of libraries’ holdings. All other information came from the websites of the Park Service units.

Most of the “Published Bibliographies” are more than several decades old, and many are of the “gray literature” genre of limited-distribution documents that are notoriously difficult for researchers to be aware of and to find. Most of them are small in size or limited to a specific topic. Only a few are comprehensive bibliographies for the unit, embracing numerous topics. The published bibliographies for thematic Park Service units (such as historic-house or social-event sites) of course direct their users not so much to site resources as to citations about the persons or events that they commemorate. In some cases they by default are small compendia restricted by the historical or temporal perspectives of the units as well as by the vigor of later historical interests and research trends.

---

109 See elsewhere herein a separate commentary regarding gray literature.
Park units that had website presence in 2009–2010 and contained some kind of bibliographical guide are also noted in the summary below. Those that had brief suggested-reading lists only are not indicated in the table. Websites that contained substantive bibliographical guides are marked; those that had “selected” bibliographies or superficial lists of just a few citations are specially noted. Additional notes indicate when bibliographical guides were specialized in any way, or sourced from a management document that was in that venue not meant to be comprehensive. None of the cooperating associations (except Grand Canyon Association) had bibliographical resources available through their websites.

NOTES (current at the time of the survey, 2010)
* Cooperating associations are noticed here only when they are linked to, or otherwise advertised by, the Park Service unit’s web pages, or if the websites of the cooperating associations notice sponsorship or advertisement of bibliographical resources; this information, when present, is included in pertinent Notes. It is likely that other resources have been overlooked as the result of undersupported webpage development for some Park Service units or for cooperating associations, which may reflect more upon administrative issues in communication rather than a complete absence of bibliographical resources.
† Published bibliographies have been located through library catalogues online, including the library source list for the National Park Service. Comprehensiveness of individual bibliographies are not ascertained here.

All web access to National Park Service units is through the NPS main page, [http://www.nps.gov](http://www.nps.gov)

Enumerated Notes
1. Research bibliography in progress
2. Crater Lake Natural History Association is the cooperating association for the national park and Oregon Caves National Monument. The Crater Lake Institute, which is not an affiliate of the national park nor is formally a cooperating association, promotes through its website a modest Research Bibliography of 300 titles in 16 subject areas. Unaffiliated resources such as this one may be noticed for other park units. When studies are made of formal park relations with cooperating associations attention should be held to distinguish between informal and formal relationships with the park
3. Website refers users to a 2008 published history of the national monument that includes an “extensive bibliography”
4. Bibliography included as part of Historical Resource Study
5. An online bibliography is available for the subject areas of natural history and environment, and for recent research; abstracts and public-domain articles can be downloaded
6. Extensive online bibliography available through cooperating association; park website includes some bibliographical entries under its natural science sections
7. Bibliography included as part of Historical Resource Study
8. Website cites a 1993 annotated bibliography of biological collections from the national park
9. Bibliography included as part of Historical Resource Study
10. Bibliography included in Cultural Landscape Report
11. Website refers to the park holding a “complete natural resource bibliography”
12. Bibliography included as part of Management Plan
13. Bibliography included as part of Historical Resource Study
14. Website includes a facsimile of 1929 park article that notes, "a complete bibliography of literature on Mount Rainier has been prepared"
15. The American Samoa Digital Library includes a comprehensive bibliography; links to University of Hawaii, Pacific Islands Coral Reef Program Environmental Reports and Publications—American and (western) Samoa, by the park’s Inventory and Monitoring staff; comprising thousands of citations, with PDF downloads for many of them
16. Website contains an external link to U.S. Forest Service Nez Perce annotated bibliography
17. Website contains an external link to the Bibliography of the Tomales Bay Biodiversity Inventory
18. Bibliography included as part of Comprehensive Management Use Plan
19. Website contains an external link to University of Northern Colorado’s bibliography for Rocky Mountain National Park
20. Website includes two research bibliographies related to park themes
21. Website includes a “Pig War Bibliography”
22. Website refers to a Natural Resources Bibliography, which has not been located
23. Bibliography included as part of Cultural Landscape Report
24. Bibliography included as part of General Management Plan
25. Bibliography included as part of Park History document
26. Bibliography included as part of History Trail Feasibility Study
27. Bibliography included as part of Cultural Landscape Report
28. See above for remarks concerning the Greater Yellowstone Bibliography online via the University of Wyoming Libraries

There is no significant correlation between the physical size, visitation profile or subjective “fame” of a Park Service unit and the presence of bibliographical resources produced by Park Service or other government personnel or by units’ cooperating associations. Some units for which one would expect to find at least an old bibliography do not seem to have such documentation, or at least none are prominently noted by that unit. Possibly, the resources available to the me had not captured information about pertinent resources, meaning either that such documents for those units may be all the more obscure or that the units do not place such documents among principal resources.

It seems surprising that so many of the smaller units have bibliographical resources, particularly with existing, published documents even if they are brief and limited in scope. This may be due to the limited number of general resources that pertain to these small units, making it easier to make such compilations. This may also reflect short historical timeframes or the relative obscurity of (hence fewer resources for) the persons or events they commemorate. Or it may be due to the independent diligence of a bibliographer who contributed the work to the unit.

Park website-based bibliographical resources, too, are largely selective and very limited. They also may not be specially prepared works, having been borrowed from
resource and management documents, which in turn are not meant to be bibliographically comprehensive.

As noted above, only the Greater Yellowstone Bibliography (GYB) online is truly comparable to THE GRAND CANON, at least in numbers of citations and breadth of coverage. The GYB is, however, not sponsored by either Yellowstone National Park or its cooperating association; it is available only online with no earlier printed editions, and it does not have an alternate digital layout that could serve as a printed publication (like THE GRAND CANON here). The two online resources (A Bibliography of the Grand Canyon and Lower Colorado River and GYB) also return search results in very different manners.

THE GRAND CANON thus is a unique, utilitarian research tool for academic users like historians, scientists, and biographers, even other bibliographers. It also serves resource managers and administrators of land-oversight agencies and other administrative entities who have oversight of units that lie within the geographic bounds of the greater Grand Canyon region and the lower Colorado River. The managers and administrators of other, affiliate agencies like those for waters and airspaces likewise will find THE GRAND CANON a source of documentary information.

In all, THE GRAND CANON documents past activities conducted within these geographic and administrative areas. It is the evidentiary record of human perspectives and civil uses of the resources there, and of official activities relating to the administration of those resources. It embraces pragmatism and philosophy alike, through widely different approaches—the views and avocations of domestic and foreign travelers; the concerns of civic organizations, citizen action groups, educational institutions and corporate entities; and the duties of branches of government and official agencies.

The earlier printed editions of THE GRAND CANON (as Bibliography of the Grand Canyon and the Lower Colorado River, 1981, 1990, and 1993), though now outdated, still are serviceable; the 1990 second edition in particular due to the addition of introductory essays for each part of the bibliography. The online edition (first posted 2000) is significantly revised and is continuously updated and emended. THE GRAND CANON, in its digitally word-processed format (here, in PDF), contains the same bibliographical content as which is online, somewhat updated and cleaner in presentation, but with the familiar layout of a traditional bibliography. THE GRAND CANON is, further, modernized and made more utilitarian with internally placed digital hyperlinks. ♦♦

Möllhausen, Balduin 1825-1905

Item no. 2.4618
COMMENTARY

“A necessary nuisance”—
The Traditional Bibliography in a Digital Age

by Earle E. Spamer

When Elliott Coues died it was the closing times of an era of scholarship when some of its practitioners seemed to know everything. Coues (pronounced cows) was one of these scholars whose experiences and capabilities crossed into a number of widely different subject areas. He is best known for his prodigious works on American ornithology, but his work went much farther scholastically, including original research in natural history and medicine, editing critical editions of Western American exploration classics, and compiling bibliographies; even essays on spiritualism. Among his indefatigable labors that have been lost was a three thousand-page manuscript on the birds of Arizona, which he

temperamentally tossed purposely into the fire. Much of his professional career as a
physician with the U.S. Army found him stationed far away from the best (or
sometimes any) libraries. To have accomplished so much by himself, even though he
was profusely in touch with correspondents wherever he was, is astonishing. His
bibliographical work is of such volume that it alone could have been a lifetime’s work;
and this was conducted, one must remember, without the benefit of modern digital
resources either as sources or for preparing manuscripts.

The art of bibliography has been viewed, particularly in the later part of the
20th century and on to today, as an indulgence of those with special interests and for
limited audiences, perhaps even a pastime of puzzling or suspect worth. Used by few,
to most publishers bibliographies are uneconomical. And indeed, why bother with
jotting down the authors, titles, and publishers of things that may already be awaiting
in online databases, occasionally even as digital reproductions of printed
bibliographies? Why bother preparing a publication that will be out of date even before
the printed pages are bound? It is a dramatic shift of opinion from a century earlier,
when bibliographies were reference tools expected to be found—and used. Substantial
tomes, some of them in multiple volumes, were issued by publishers worldwide;
awaited for, purchased, cataloged, and worn out by librarians and individual
researchers.

Yet even in Coues’ day the process of bibliography bore the stigma that it is not
scholarship, at least not in the sense that it contributes new insights to a given field of
study. Perhaps; because a bibliography is not usually a production that provides new
interpretations or criticism of historical works and scientific hypotheses; that is, they
do not usually advance understanding in a field. Only the truly comprehensive
bibliography of a broadly recognized field of scholarship (Americana, for example),
when it contains authoritatively critical commentary on the items it cites, may provide
contextual contributions toward understanding in its field. The various editions of
Henry R. Wagner and Charles L. Camp’s *The Plains and the Rockies* is a fine example,
to single out but one.

Few users “read” a bibliography; it is a reference work, used piecemeal like a
dictionary or like a thematic concordance. Sometimes it is a biographical aid about a
certain author, or it is a bookseller’s or collector’s key to some of an author’s works.

---

110 Paul Russell Cutright and Michael J. Brodhead, *Elliott Coues; Naturalist and Frontier Historian*

111 Henry R. Wagner and Charles L. Camp, *The Plains and the Rockies; a Critical Bibliography of
Exploration, Adventure and Travel in the American West, 1800-1865*, revised and enlarged by
These are its utilitarian tasks; yet, what often lies unrecognized in a ponderous list of published works is that it stores far more of utilitarian value within it.

At its usual and most basic, a bibliography embraces a chronological and literary history, a guide to things that are stored somewhere and there available for use. Each item can be a point for source material, or many items may be a foundation for evaluation, annotation, and enhancement by later researchers. If one takes the time to read through a comprehensive bibliography, it brings attention to what has already been done, as expected, but it can also reveal to those who are knowledgable in the subject specific problems and areas of neglected work. A thorough reading is surely bound to draw one’s attention to many surprising, peculiar, even important items that may otherwise go unnoticed even by the most diligently precise researcher. And, as a caveat that bears frequent repetition, one which is empirically proved, the work on a bibliography is never done, even when one thinks little more can be done. A bibliography always bears more fruit in newer editions.

I argue that specialized and truly comprehensive research perspectives can be gained and administrative needs met by using traditional bibliographies. These are the works that have been assembled by thoughtful evaluation, essentially by hand; they are not shopped out from queries run in existing databases whose construction and content may not be fully suited to the work being done. One may suppose, correctly, that in earlier times the frequent users of bibliographies understood how such works could be mined for information beyond the simple listing of things that had been published. I, however, infer from working with younger scholars on a daily basis that this kind of resource is becoming forgotten knowledge; many of these researchers are unaware of the diversity (even the presence) of detailed bibliographies and how such works record the progress of and access to scholarship in a pre-digital world.

If traditionally published (paper) bibliographies were digitized, perhaps the awareness of such tools would be less overlooked, perhaps even less shunned as research tools. However, many comprehensive kinds of bibliographies thus far have escaped major efforts of digitization, likely because of their obscurity or, for some, that they remain under copyright. Even if my charge of growing scholastic ignorance of bibliographies is poorly footed, bibliographies are then likely dismissed because of a perceived limited, antique kind of usefulness. Also, a kind of forced bias against bibliographies may be imposed by modern publishers who see in bibliographies only low projections of market share. But in the end, it is probably a user-dominant perception of bibliographies that occludes them; they provide low returns on scholastic or administrative contribution to research at hand. Hand-conducted searches such as
those that would be done with conventional bibliographies takes time when the resource is dauntingly large, a prospect that is not always in the immediate best interest of hurried researchers and, in particular, administrators who work with deadlines in fiduciary straits.

I think the hindrance to recognizing traditional bibliographies as useful resources is the medium—paper, in a world increasingly responsive to digital resources. And by this I do not mean a simple digitally-scanned presentation of a paper original, but the queryable interaction of a database that delves into a resource and retrieves data following programmed instructions. Researchers increasingly rely upon “tools” created by others and are inherently trustful of the results given to them based upon structured queries. With respect to paper bibliographies, there is a tremendous amount of information contained in them, but the process of getting that information out is becoming both lost knowledge (a lost art, even) and perceptually a waste of time.

The power that can drive re-recognition of bibliographies, however, can come from the very medium that threatens them to begin with, through developments in intelligent processing. There is coming a time, which already has begun to appear, when computers will have the ability to analyze what the user expects to find for an application to the work at hand. The major advance in this area will be when they do not err with obvious or peripherally-related omissions or with the finding of unrelated items; a demanding expectation from our viewpoint today. And a digital resource’s own responses (in some fashion we can only wish for today) will have to contextually retrieve or flag material—suggestions, if you will, or more certain alters—that the user may not have known will be useful. We are not yet there, despite the promises and implementations of interpretive software such as that utilized by commercial developers like Google (to use a current example\textsuperscript{112}). Yet who even a generation ago could have anticipated these things we use today? The abilities I envision are likely to come. In the meantime, we have a world filled with available resources, paper and digital alike, and to overlook the power of one over the other is an unfortunate tendency. Encouraging them to work together will improve the utility of future resources for researchers.

Notwithstanding its potential as the foundation of future ambitious projects, the comprehensive bibliography is—and should be promoted as—the documentation for everything that has been published (and thus available) within the constraints of its scope and content. It is further an administrative account, documenting activities as revealed through publications produced in the execution of official duties, and documenting the conduct of those who carried out that work.

But—this is an item of high importance—students new to a field of work should see that a pertinent bibliography embraces as much as possible of the subjects that are collected in those pages. It is a guide to previous research, opinion, criticism and commentary; a body of literature that expresses the development of themes that pertain to the subject; and a chronology of changing research focuses over time. The astute student may also seize from a bibliography ideas of things that are problematical and discern things that seem not to have been done or have not been adequately explored—prime focuses for theses, dissertations, and future professional research for them and for their students in turn.

Most research materials today still are in paper formats and, pragmatically considered, will remain so for a long time to come. Digital materials now add to the volume of available research material, but despite some that have widespread use and attention they pale against the total that has not been digitized. The digital forms may someday, probably, dominate libraries; but will they represent the greater part of the whole of all available, printed literature? The present-day GoogleBooks effort, for example, is both laudable and becoming indispensable, especially within the realm of materials that are now in the public domain. There are other such projects, each with specific focus, but the Google project is encouragingly broad in scope. Many obscure titles and source materials come to light because of its searchable functions; this much is obvious. It is a very powerful tool for analyzing cultural trends, even thought it is restricted to the relatively “few” millions of items already digitized. Yet, GoogleBooks is not without its flaws; for example, misaligned pages lacking parts of their content, pages warped, miscentered and unreadable due to the operator’s mishandling, pages obscured by the operator’s hand, the procedural omission of fold-out illustrations and other things that deviate from the single-page format, and discordant publication titles. Utilitarian goals have here superseded craftsmanship. Furthermore, anything that fails to replicate the original publication forces one to search for an original copy of the work if particular interests demand it, which is counterintuitive to the conservational intentions of digitization. One may envision a day when book scanning is accomplished in the same fashion as, for example, non-invasive three-dimensional scanning of the human body, like Magnetic Resonance
Imaging performed on us today. The thought is every bit as preposterous as the idea of MRIs would have been to our grandparents when they were young adults, or for that matter, X-rays to our generations of greater-grandparents. Taken a step farther, we may envision the most fragile of scrolls, never unrolled, scanned and “flattened” in the same fashion. But these are accomplishments for the future; right now, we work in a research and reference world partly digital and, a page at a time, still mostly paper. The guides and aids in all this, however, are ever-increasingly digital.

By and large, in major research libraries digital formats are not replacing that which is already available in paper. Resources published in inkprint remain a principal research tool, copies of which are usually obtainable in several or many locations. In judiciously maintained collections, the originals of those items that have been digitized will be kept in addition to the accessible digital copy. Regrettfully, some libraries must respond to the limitations of finance and physical storage space by retreating from the conveniences of shelf access, banishing “less used” holdings to remote storage locations or disposing(!) them. The general philosophy is that such material is a burden to maintain and is also “available elsewhere”. That presumption holds that other institutions will gladly carry the burden. It is a fatalistic approach that throws roadblocks into researchers’ paths. How non- or inconvenienced-access affects the research routines of scholars is so far as I know not well publicized; and whereas the desperate or determined researcher will one way or another find what is needed, how many will not have the financial, temporal or temperamental resources to pursue some items, then proceed without them? Productivity and scholarship thus suffer.

For the time being, there is a good chance that everything that is cited in a bibliography of published materials will be accessible somewhere. One may correctly surmise that digitization is improving access to some materials, even from the comforts of one’s home or office. But what of material that is uniquely digital, like the nebula of web-posted materials? The web material may be instantaneously accessible now, but there lingers uncertainty whether, citations or not, web-based resources will be accessible at any time in the future. If say, a citation for a publication printed in 1900 is discovered in 2100, there is a reasonable expectation that a copy of that work will be found somewhere; not so with web-based products, which may be gone tomorrow, in five years, or any time, at the blink of an eye. So-called “archives” of past websites are useful but they are limited by non-comprehensive selection, broken hyperlinks to material that is no longer attached, and the technological liabilities of the very medium they strive to archive; and moreover by the very fact that they themselves also remain—ephemerally—in the web environment.
Web resources can absolutely disappear—every “copy” as it were—at the whims of website compilers who take away posted documents; website managers and tinkerers who change the electronic location of documents, moving, adding, revising, and disposing at will; and website hosts who may move to new Internet locations, rename themselves, or close down. In every case the loss of material is an electrifying travesty; so much so that many people probably cannot fathom the ramifications should major portions (or the whole of) the web collapse.

A web-link citation with no actual linked material relocatable, accessible, or surviving is pointless; like the call-number of a library book with no copies extant. We might be fortunate, in such instances, to discover that copies of this kind of “light gray literature” had been captured here and there, digitally or as hardcopy printouts in other locations and collections. But discovering these uncharted islands in the vast archipelago of personal and institutional collections may be only serendipitous; certainly not assured. And further, such survivors may represent only a fraction of the original set of documents or web pages.

The dramatic drive toward routine computerization that took place in the later part of the 20th century has illuminated a constellation of large digital bibliographical databases. Researchers now may find individual items that meet certain selected parameters. The selection is partly that of the inquirer in structuring the query, but it also relies on the cataloguers who, as they always have even in the days of card files, have made selective and professional assumptions as to the pertinent subject and content of a work—this to allow researchers to locate “all” pertinent works to their present tasks even though the method does not anticipate those researchers who have specialized or unusual focuses.

The digital databases are only as good as they are designed, of course, but there are many good and well-used ones in fields of study from medicine to ecology to sociology, and so on, in addition to master files of library holdings like OCLC and WorldCat, or the profound but still-limited GoogleBooks content-searchable digitization effort, although all are restricted to those institutions and organizations who participate. Then, too, there are the online catalogues for individual libraries. Or, we may turn to numerous commercial content-indexing services, some of which have been adopted by academic libraries, like JSTOR or EBSCO MegaFILE. We are thus subservient to the whims of cataloguers, whose professionally directed assumptions

establish the content subject of an item and thus the retrievable citations from an individual subject query. Likewise, one is also at the mercy of authors and editors, who may not craft informative titles and subtitles. One may wonder after a digital query has been made, what has been missed in these returns?

One of the perplexing issues of regular digital querying is receiving spurious citations that have nothing to do with what is expected, even though the structured query does correctly hit upon homonymical words or strings. As cases in point, a search for “Grand Cañon”—hence also “Grand Canon”, a common typographical permutation used in the late 19th and early 20th centuries—citations will be found about: 1) ecclesiastical commentary (as in grand canons of scripture that include lists of authoritative works, which one may see simplistically as “rules” of faith or conduct); 2) clerical grand canons (canons specifically being a body of clerics who live according to rules and are self-ruled amongst themselves); 3) canonical affairs generally (as in references to something being a “grand canon” or [again] “rule” in some aspect of human conduct; for example, the “grand canon of writing” or a “grand canon of law”); 4) the history of artillery (grand canon, “large cannon” in French; and also specifically to “Big Bertha” of World War I Germany\(^{114}\); 5) music (“grand canon” being a definitive set of musical pieces); 6) typography (“grand canon” being a style of large point size, one not necessarily precisely defined, also known as “double canon”; examples have been noted at 44 and 48 points)\(^{115}\); 7) references to “Le Grand Canon”, misspelling of the Civil War memoirist, Le Grand Cannon (Le Grand Bouton Cannon) or the 20th century novelist Le Grand Cannon (and possibly others with this name)\(^{116}\); and 8), of course, references to physiographic features named “Grand Cañon” or those that are noted more generically in the typographical synonyms, “a grand cañon” or “a grand canon”.

There are also annoyances that are due to misleading query returns that sit unrecognized by the mass of users, but glare startlingly at those who do know, which,

\(^{114}\) When in French literature the term is capitalized “Grand Canon”, in pertinent context it is a direct translation of “Big Cañon” in English, a former name for the Grand Canyon of the Colorado River. It is thus most usually in reference to published reports from the J. C. Ives expedition of 1858, which described and portrayed “Big Cañon”. There is, too, published account of the Place au Grand Canon in Ghent, Belgium, the location of an “enormous cannon” named De dulle Griete, or Mad Margery, manufactured in 1452 (John Murray, *A Handbook for Travellers in Holland and Belgium*, John Murray, London, 19th ed., 1876, p. 135).

\(^{116}\) Note must be made also of one Le Grand Canon Griswold (notice the spelling of “Canon”), a member of the Class of 1903 at Princeton University. (*Directory of Living Alumni of Princeton University*, Princeton, 1911, p. 137.)
perhaps undeservingly, detracts from the user’s perception of the quality of the database. Still, the preponderant usefulness—and precision—in these master databases is a wonderful resource. They would be missed if they did not exist; yet, they did not exist a couple of generations ago, when all that were available were printed, eye-searchable bibliographies, only occasionally indexed or annotated—and, of course, ubiquitous card files, each a Version 1.0 of its digital descendants.

If anything (within reason) can be found quickly in a lightning storm of digitally cataloged publications, why in the world should anyone fall back on a broadly focused bibliography that laboriously and slowly plots decades or centuries of publications in a serialized or print-like format, one discrete item at a time?

The use of conventional, inkprint bibliographies is contrary to the instant matters-at-hand ethos that has assimilated an “online”, “wireless” generation. The big picture may be superfluous, and from such a view a bibliography may invoke ideas of wearying overextension, or at its cuttingest, quaint irrelevance. Yet the reason a comprehensive bibliography can still stand firm in spite of its asynchrony with speeded-up modern research methods is that its compilation authoritatively audits observations and work produced within the subject it embraces; and it is the evidentiary record, visible as a whole, of the work of individuals, agencies, and organizations. It is responsive, even if slowly, to unique lines of inquiry or to administrative needs that cannot rely on presupposed, standardized categories of indexing nor solely upon structured queries the rigor of and results from which may vary.

It is the content of a bibliography that brings its attention to users, less so the composition of its citations. While many are compilations of books only, others may compile magazine articles, perhaps just from the 19th century, for example; the permutations are numerous, each utilitarian within its scope and intended audience. Rarer are those bibliographies that canvas multiple source types (books, magazines, pamphlets, etc.) or multiple media types (printed, audio, audio-visual, etc.) or are temporally comprehensive, spanning centuries. The modern digital databases are similarly focused; they have selective content depending upon their intended coverage and audience. The most attractive aspect of the digital forms is that they are broadly accessible and take up no shelf space, though they are susceptible to digital decay and non-migration to revised software and updated hardware. But by and large, the digital databases, unlike traditional bibliographies, do not lend themselves to browsing.
Traditional print bibliographies can be concisely packaged or cumbersome, even unwieldy in multiple volumes. They can be complex in ways that some questions asked of them can be answered only by flipping back and forth in the volume, or between volumes, fingers, papers, or scribbled notes holding places. While some users find this kind of basic research fascinating, others find it counterproductive, thus they rely more on the electronic bibliographies that now are de rigueur. It depends upon how fine a focus the user has on the project in progress, and how deeply into time that project delves; many older bibliographies are not digitized, and the large databases may be selective in the time range they cover. Many good and surprisingly useful resources just are not yet available digitally.

So for now the traditional bibliography (whether in inkprint or even in page-oriented digital format) is still among the useful tools for those who need to browse, or for searching for specific pieces of information that have not been found electronically or which cannot be conveniently extracted from proprietary databases. A downside of relying only on the digital database is that it lacks the utility that comes with consciously perusing the whole of a bibliography. Digital queries return sets of information that respond to the user’s query, but they only offer up the information that the database’s programming understands through query structure. However, a researcher in the depths of analysis and thoughtful consideration is analyzing multiple sources so as to establish the relationships between them, and thereby recognizes sources that pertain to the project. Conventional bibliographies may escape notice today because they are not recognized as mainline research tools; in some instances their very existence is unknown.

The kinds of pertinent information sources—citations, in the parlance of bibliographies—that catch a researcher’s attention cannot be assembled (yet) by a computer program that responds to a structured query. The broad palate of raw data is understood only by the researcher; it is not delivered in an individual citation or structured group of queries. With the raw data the researcher is informed of sources that will deductively contribute to, argue against, or ratify hypotheses and opinions, or occasionally will even alter long-standing axioms in a field of study. The broad palate contributes toward the construction of arguments and helps draw up the support used for critical commentaries and unique conclusions.

To use digital databases to compile sets of data for supporting arguments, or for making meaningful evaluations of scholarly questions, requires a prodigious amount of data-gathering that may or may not see the whole. For example, Stephen J. Pyne in
How the Canyon Became Grand used the 1990 print edition of Earle Spamer’s Bibliography of the Grand Canyon and the Lower Colorado River to collate statistics about the kinds of publications that had been produced during the previous century and a half. Lacking a database format at that time, the bibliographical information Pyne sought was tallied by eye and hand, somehow an appropriately traditional use of the bibliography in a time which even then was rapidly embracing digital formats.

This brings up an important point, one which takes the step beyond usual bounds of academic curiosity, stepping toward pragmatic inquiry. Perhaps those who demand the most information, but in discrete packets, are administrators, of whom one may never predict what will be needed or how a question will be framed. In the case of a national park, for example, a resource manager there might at one time need to account for every bit of publicly reported entomological research conducted in the park and the adjacent federal forest lands, but only since the creation of the national park. At another time, a query may be had about published discussions of the park’s sewerage facilities and water recycling. Polling library and special-s serials databases might provide some answers quickly, but there are many catalogued citations that will overlook a component contained in a larger, unrelated work because it is not a cataloguer’s duty to relate the detailed content of a work. Two further points are that some works never have been catalogued into the modern databases, and no bibliography is a “master index” to everything contained in the publications it cites. A comprehensive bibliography can, however, pay its dues in a far-reaching administrative sense by revealing more than may be available anywhere else. True, it may not be the administrator who does the work, but the data delivered will be used to administrative effect. And in the objective sense of administration, the worst thing for any administrator is to be not informed; how the information is gotten is of less concern than having it.

If a researcher will wile the time to peruse a large bibliography just once, they will find works that would have been overlooked by a database query. There also are adjunct references that may not be directly related to the inquiry but which will have some ancillary application to research then underway—and, if not to the research then in progress, then serendipitously to another task the inquirer is working on or contemplating, perhaps even to inspire a whole new project. These are things that will not be delivered by querying databases. Only a user has the knowledge to recognize

---

118 Earle E. Spamer, Bibliography of the Grand Canyon and the Lower Colorado River, From 1540, Grand Canyon Natural History Association Monograph 8 (1990), and supplement, 1993.
the things that do not fit a predetermined, pre-analyzed set of criteria. And by critically reviewing an entire bibliography, assuming it is reliable within its stated scope, a researcher will have the comfortable assurance that a substantial portion of the work previously done will have come to his or her attention.

It is similar in scientific or historical research. Only the researcher has the expertise to recognize the things that are useful for the study at hand. Running a database query will return far different results than a more laborious, time-consuming “read” of a bibliography. This is nowhere more important than to the student who is new to a field; there is no other place that will provide, in one source, a view of all that which has been already done—and I do not refer to a “selective” view of the “most important” things even though such overviews are themselves important and useful. I am quite at a loss as how to advertise the benefits of a comprehensive survey in lieu of the snap-of-the-fingers return of an answer that, outwardly, seems to be comprehensively satisfying by itself. From resources that claim to include “everything”, a user will have a better perspective of the range of what Benjamin Franklin called the “useful” and the “ornamental”\textsuperscript{119}, or more pointedly, the “treasures and trash” as librarian Louise Hinchliffe more judiciously viewed the coverage in a comprehensive bibliography.\textsuperscript{120} ❖ ❖ ❖

Which brings us again to Elliott Coues. His bibliographical work is all the more remarkable when we realize that he reached this level of achievement at a time when things were done by hand. I am now in my fourth decade of bibliographical work, compiling, editing, and formatting editions both printed and digital. I understand the time it takes to do these things even with the help of computers; and looking at Coues’ productions I am impressed. Even in 1876 he was intending to compile a “universal bibliography” for ornithology—“from Aristotle” no less!\textsuperscript{121}—and although he accomplished a master North American ornithological bibliography of tens of thousands of items, and embarked on one for other world locales, he quit, finally, when confronted by the realities of the volume of material and the limitations and

\textsuperscript{119} “You are now in that time of Life which is the properest to store your Mind with such Knowledge as is hereafter to be ornamental and useful to you.” —Benjamin Franklin to his grandson William Temple Franklin, 13 June 1775. (American Philosophical Society) Franklin used the two words in juxtaposition in other writings as well (http://www.franklinpapers.org).

\textsuperscript{120} Louise M. Hinchliffe, Foreword in Earle E. Spamer (compiler), Bibliography of the Grand Canyon and the Lower Colorado River, From 1540, Grand Canyon Natural History Association, Monograph 8 (1990), pp. v-vi.

\textsuperscript{121} Elliott Coues, [Correspondence], Forest and Stream, Vol. 6, no. 3 (February 24, 1886), p. 36.
distractions of life. Imagine his perspective of things were he to forecast the literary tsunami of the 20th century. Indeed, would he have even begun the task?

Collating and arranging references is mundane work, certainly, sometimes augmented by interpretive commentary that provides more exercise for the mind. Only one who is intrigued by the printed word, by the rewards of reassembling information, and delving deeply for treasures in existing resources finds it interesting. But none of it is done mechanically; it still does take a person to make evaluations of material to be added, skipped, elaborated, revised, reverified, corrected or otherwise emended for the bibliography. A single citation that appears in a bibliography is not always a simple recitation, quickly copied down before moving to the next “find”; each reflects its part in a cycle of acquisition and evaluation. Sometimes batches of citations are discovered at once, conveniently herded together and ready for classification and copying, but other times specific in-depth searches will yield but few items (or one, or none!) in a long trawl.

Coues, in 1897, admitted for himself, and probably for all bibliographers, that “It takes a sort of an inspired idiot to make a good bibliographer . . . .” He called bibliography “a necessary nuisance, and a horrible drudgery that no mere drudge [can] perform”. He likened the drive to do it to “the appetite of a gambler or dipsomaniac”. I agree, but I must add, for myself and for Coues, that there is a separate, eager force that comes in “infatuation”, which ameliorates drudgery and tedium. Perhaps infatuation is a kindlier form of “inspired idiocy”. Years earlier, in 1874, Coues had already discerned the modern purpose for bibliography, one that sees scholarship acquiesced by utility. He explained, “The labor of such compilation does not appear on the surface, [which I mention only] in the sincere hope that, once accomplished, the weary drudgery of future workers in the same vein may be materially lightened.” In this statement, too, may be read that the reward in bibliography is usefulness to persons and in times not known to the compiler.

---

Surely Elliott Coues would have embraced the computer as a savior of bibliographers’ collation and editing work. In Coues’ day the routine work of compilation led predictably to drawers and stacks of index cards and papers, to lengthy pages of drudged, uniform citations not meant for fireside reading; which when done up in printed form became rather a nuisance to use. At least in printed form they were more readily accessible nuisances. Today, the routine work of identification, evaluation, and compilation still has to be done even for the digital databases, but the ways in which value-added products are now derived from the main body of bibliographical data significantly amplify the usefulness of digital forums, although at the expense of limiting or wholly occluding the ability to perceive and browse the whole.

When my compilation of the Bibliography of the Grand Canyon and the Lower Colorado River was first published in 1981, I never gave a computerized version a thought. In fact, all the draft and final lists well into the 1980s all were rolled through typewriters. Ironically, I was about to embark at that time into a part of my career where I wrote technical reports about computers. Computers, then, were mostly batch-oriented mainframes, impractical to load up with millions of bytes of data just to sit and wait; most data were typed first onto punch cards and read as needed into the computer’s memory to be processed by programs loaded into it just for the job. Interactive terminals, which were not yet everywhere, were pokey contraptions with awful keyboards that had stiff, rackety keys; across murky, monochrome “CRT” (cathode-ray tube) screens data returned from the core of the computer, noticeably character by character, with dot-matrix resolution that one could see on the screen. No one had one of these things at home. And what became the Internet was embryonic then, the limited domain of military consortia and hard-wired academics shuttling bytes and words, not graphics; it was still unknown to the world at large. Besides, computers of the day were meant for “data processing”, which effectively meant “number-crunching”, coddled with text. Relatively crude compilations of bibliographical data could be, and were being, compiled through the assembly of boxes of punch cards or reels of digitally formatted tape, but these in the end resulted in more pages of paper documentation, awkwardly printed on aesthetically unpleasing computer printouts. And simply unheard of were digitally composed pages—except those like that of a proprietary computerized system, inside of which individual

---

characters on fiche-like cards were strobe-flashed perfectly, in synchronized computer-instructed arrangements, through lenses onto rolls of photographic paper, which, after chemical development and physically cutting and pasting them into page layouts, were used as camera-ready copy for offset printing.

I admit that it is difficult for me to rely on something other than five centuries of book production technology and the distinctly diverse ways in which books have been distributed and used. The ephemeral nature of the Internet can be scary to a paper-dependant person, despite unspecific promises of a world of data (notably not “the world’s data”) at one’s fingertips. An online or otherwise digital bibliography can further allow for a continuously updated format, unencumbered by the methodological “edition” of traditional publication with its physical constraints, expense, and distributional needs. In that fashion, looking ahead such a bibliography can be reused and improved in ways we probably cannot imagine now. Still it may well turn out that bibliographies in general are only an indulgence of research methods that will no longer apply in the 21st century and after. Bibliographies succumb to human limitations, too. Coues himself abandoned the work of bibliography, “forcibly divorced”, he said, from a mania with which he could no longer keep pace. But he gave up because of the volume, not because the technology had changed.

Now I wonder how infrequently are Elliott Coues’ bibliographies referred to today. To my knowledge they exist only in print format, although one or another of the massive digitization projects underway today may have captured them, or will. His bibliographies are outdated by the passage of time, but I think a more accurate term is “outpaced”, as Coues himself admitted had happened—they are still reliable for the time periods they embrace.

Even though every good intention is held to make a bibliography comprehensive, if that is its intention, pragmatically it is not. The very nature of bibliography lends itself to incompleteness; there is always more to be found, even within the most conscientious of scholarly fields where it may be vainly believed that “every work” has been found. The fact that multiple editions of a bibliography are published, each of which include many citations that should have been found for earlier editions, testifies that the obscurity of references is due both to the diverse and broadly scattered material that must be found, often serendipitously, and to the growth of and improvements to the bibliographer’s methods and resources. The passage of time naturally adds new works as well as allowing a compiler to rediscover

old works previously overlooked. And it allows new technologies (like the Internet) to overtake the compiler, which reveals all the more.

In 1878, Elliott Coues had already confirmed observations that I have made on my own more than a century later. In his ongoing master bibliography of North American ornithology he wrote, “Bibliography is never finished, and always more or less defective, even on ground long gone over . . . .” And, speaking of himself, but which the prospective bibliographer can heed, too, he concluded in the third-person, “The writer would [like to] be accurate; yet he feels the weight of Stevens’s satire: ‘If you are troubled with a pride of accuracy, and would have it taken out of you, print a catalogue.’” It is more broadly a recurring predicament of scholarly publishing, even if hardly ever admitted. Malacologist Henry Pilsbry conceded in 1949, “If you want to learn how much you can overlook or forget, just write a book.”

The traditional bibliography is still essential in the digital age. By “traditional” I have not meant “old” or out-of-print, but comprehensively monographic, all in one place, and visible. Thus grasped, comprehensiveness offers perspectives that databases do not because the marvelous electronic guides do not offer the whole to the user. Neither do the electronic guides anticipate all perspectives of a researcher’s task in the ways in which the researcher has in mind. This may change—so we hope from the work and talk of artificial-intelligence developers—but for now our most productive work is realized in two ways: one of filtered digital responses, the other from pages.

The services of a database are unambiguously focused; its selections depend upon the way in which the user has queried it and upon how the database’s creators have fashioned its data fields and the methods by which the data are parsed in response to the user’s query; one depends upon the skill of the other. The traditional bibliography, on the other hand, depends foremost upon the skill of its compilers: for its stated subject is it comprehensive, accurate, and useful? In practice, it first reveals at a glance the whole volume of its subject, then it affords its user numerous points of entry that are invisible from a query screen in a digitized database. By identifying sections of the bibliography in which to perambulate, an indulgent and patient researcher so disposed can uncover qualitatively and subjectively more in paging

---

through it; more than may be found exclusively by a filtered, “guided query” of a pre-
categorized database like those acquired on the web or met on dedicated terminals in
libraries. With one way we are, regretfully, subservient to the limits of technology; and
the other way we may obeisent to the physiological and temperamental limitations of
the human body and mind.

To be sure, while databases and pages are procedurally at odds, they are for
now both indispensable. The dichotomy challenges researchers; administrators, too,
who need timely and concise information; and librarians, who provide access and
direction to useful resources. Using a digital database gets “a” job done. A slowly used
monographic bibliography provides the finer resolution of a subject. Users who must
be time-conscious may view a conventional bibliography as a regretful nuisance, one
not useful to the task whether by its sheer volume or by the greater number of
“inconsequential” references in it that make it difficult to isolate those that are deemed
“important” or “significant”. And yet, another user whose very mission is to uncover
myriad minor (thus “important”) resources—or perhaps an elusive clue—is likely to
retrieve them from a careful reading. The contextual positions that specific or minor
items hold can be discerned only by a subjective analysis by the user. Someday, ever
more complex search needs will be matched by the resources and techniques of a
vastly more intelligent digital world, as will also researchers’ subjectively unique
queries be far more satisfactorily (maybe even serendipitously) answered. In the
meantime, we have our usefully, sometimes fumbly, mixed world of pixels and paper.

Despite concomitant arguments that admonish either conventional or digital
resources, the traditional bibliography, regardless of its medium, still provides one of
its greatest resources to new students to a field. While it may be deemed to be an
awkward, if not simply antique, kind of resource, at its best it records much which
has been published on the subject it embraces. With it one may see how that body of
previous work applies to the field it covers. As a student advances, the traditional
bibliographies they may encounter will be seen with broader familiarity and with
greater insights gained from the student’s growing command of the field.
Bibliographies also record contributions and false leads; they may even reexpose and
reinvigorate perspectives that have been forgotten in an historical eddy along the main
stream of a field’s advancements. In reading the bibliography the student may also
discern insufficiencies that draw attention to areas needing more or renewed work.

The bibliography serves all researchers as the documentary and evidentiary tool
it is—this is the principal service that bibliographies have always provided. But
further, it may serve as a foundation upon which to build more detailed, modernized,
and reliably useful new guides—including new digital ones that will be used by future generations of more intelligent computerized query-processors and the databases they access. No longer interminable lists of static citations, traditional bibliographies, even those produced years ago, may also serve as platforms on which digitally accessible texts may be acquired. This will not just depend upon random, user-structured queries or search strings (such as how users work with GoogleBooks today, for example), but the bibliography–platform will serve as an authoritative, pre-analyzed (perhaps annotated) list that can produce copies of the material there cited.

One most essential fact remains: within a traditional bibliography the work of proving sources is already done. It frees its readers to extract from it what is most immediately useful. It allows researchers and information providers to devise and refine value-added products. It affirms for administrators a body of available documentation and prior work, and it may in some cases set benchmarks in the evaluation of resources or the corroboration of historical significance. Thus a bibliography never will be again a dreary documentation of what-has-been-done, but is the proof for informational benchmarks and a meticulous contributor to what can be done next.

References

Coues, Elliott. 1876. [Correspondence.] Forest and Stream, 6(3)(February 24):36.

One of the more interesting and artistic items of gray literature in the Grand Canyon bibliography. This is the Draft General Management Plan and Environmental Impact Statement, 1995, which contains a number of watercolor paintings (including the cover, here) by an artist who is, regretfully, not credited and the signature (beginning “Th”), is not decipherable. Whereas some sources may know who this is, the general readership does not. Measuring 11 x 17 inches (a full 35 inches fully opened), this is an unusually artistic example of gray literature. [Item no. 13.1328; see also Item no. 13.1329.]
How Many Voices Unheard?
The Choir of Gray Literature in Bibliography
with examples from THE GRAND CANON

by Earle E. Spamer

Researchers of every kind eventually meet up with “gray literature”, the murky informational nebula of publications that are produced usually for limited distribution, sometimes not intended for longevity, and which seem to be cited every which way. It is called “gray” because these documents lie outside of the usual channels of publication and distribution and confound tidy forms of cataloging. Data about authorship, publisher and place of publication may not be clearly shown, at least not like as seen in conventional books and serials; even the title may be ambiguous or confused with another document, even worded differently on cover and title-sheet (if there are the both of them).

Gray literature stands out in some sections of THE GRAND CANON; such is the nature of the subject and the means by which people and agencies communicate their opinions and findings. For this reason this essay is an excursion into the realm of gray literature, partly to relate the hidden importance of this kind of literature and partly to introduce it to those readers who may be unfamiliar with it. Gray literature is a
peculiarly interesting form of publication that may not have been encountered by some readers, and for those who are all too familiar with it they may be unaware of the broad professional perspectives of it by an industrious, sometimes bewildered, community of librarians, bibliographers, and researchers.

**Color-Coding Grayness**

**Cataloging Documents** may seem to be only an academic exercise, a mundane part of running a library, but it is the means by which a document can be identified and, whenever it is needed, found. The level of detail in cataloging is a function of a library's resources in staff time, expertise and perceived needs in serving its clients; despite professional cataloging standards, it can, and does, vary.

Sometimes years or decades pass before an item is called for—longer times of a century and more are not unheard of—but the document’s usefulness is not best measured in its frequency of use but in its availability. This is in stark contradiction to the pressing responsibilities of overcrowded libraries that relegate materials rarely called for to “annexed” storage, often under warehouse conditions in a facility physically apart from the library. This material may be “called for” on request; usually a day or more passes. In some academic libraries, these off-site materials may be requested by students and faculty, but guest researchers may not have the permission to request these items. Sometimes this kind of material is simply placed “on file”; and the “files” are often accessible by library staff only.

Worse, some libraries elect to dispose of less-used materials. While such decisions are pragmatic, the shame of this is that one may never presume what will be of interest or use to a researcher in any place or time, and to fail a researcher’s needs is a library’s greatest failing. Unfortunately, a lot of gray literature is just the kind of material that wends its way to the annexes, re-sale bins and recycling containers—if indeed it makes its ways to the shelves in the first place. I prefer a less-used term, “fugitive information”,¹²⁹ to describe the content of gray literature because it accentuates both the inherent usefulness of the material and the predicament of the universe of gray literature; but researchers and librarians are more familiar with the long-standing “gray” label.

Within a library’s cataloging schemes it may be a matter of how “gray” a document is that determines its projected usefulness to the library’s clientele; whether it is accessible immediately, “on request”, or not kept. In *The Grand Canon* here, the number of such fugitive citations are apparent particularly in the sections devoted to the environment and geology, so it is the researchers in these areas who will be most attracted to and impacted by the presence in inavailability of gray literature. Whether or not all of these cited documents can be located today is a matter that is, regretfully, the burden of the researcher and the hapless librarian who assists.

Once, the medium was limited by economy, too. Many works were produced by mimeograph; even, as around the turn to the last century, by such arcane methods as the Edison Electric Pen process. Today, in addition to its conventional text-on-paper-sheets format, gray literature may appear as slick, professionally produced documents, as often as not in full color—and now in digital formats as well. But the “gray” remains: the creator’s intentions for audience and distribution, and the ways in which the document is physically composed, continue to shroud the very tidy and conventional things that librarians and researchers look for when they catalog and cite these documents.

A document’s size or format never determines whether it is “gray” or not; it may be one or few pages, or multiple volumes, and it may be a dreary mimeographed document or a colorful compendium of information. What makes it “gray” is how such literature is produced, acquired, retained, and retrieved. Some libraries receive these items as a function of maintaining their institution’s internally-produced records, or by happenstance or donation, occasionally by purposeful acquisition, paid for or at no cost. Then, different librarians may follow different rules for cataloging the same document, depending upon whether the library follows established practices or its own special schemes. If the library is cataloging a document as “one of its own”, produced by the staff or department of an organization or agency that it supports, it may follow different procedures than if the library were cataloging a document received from outside. Some may catalog them for inclusion on the readers’ shelves; others may banish them, perhaps not even cataloged, to “reference files” whose only guides are alphabetization and folder tabs.

When “gray” documents are cited by researchers or as part of administrative productions, the writers or their editors will follow both standarized professional guides and house rules of style for citations; sometimes they will be creative. Citation styles vary greatly between professional journals and publishing houses; some follow one or another of separately published writing guides (for example, the *Chicago*
Manual of Style, which is followed by many publishers and academics, or agency-specific guides like Suggestions to Authors of the Reports of the United States Geological Survey). “Forcing” a gray-literature citation to conform to one style may muddle the information contained on the title page or from other evidence within the document, a disservice to those who follow up on it. Title-pages may display a confusing arrangement of typography, title, subtitle, series name, and other information—not necessarily well arranged—while other times the same breakdown may be displayed on various pages, even the last leaf. Researchers who find citations written in one format may look for, or request through a librarian, one of these documents only to learn it cannot be located, not because the document may not exist in the repository searched but because the document may have been cataloged differently from the source the researcher has in hand—thus, “not found”. One must wonder how much potentially useful gray literature does not find its way into a researcher’s work only because a copy of a promising source could not be found.

To cut to the chase: I have followed a simple rule in THE GRAND CANON—I cite the title, author, and responsible parties for documents of gray literature, as precisely as possible from the original and following as closely as possible the citation style used herein. Special investigatory program or contract numbers are included as notations when they are so indicated in the original document. It is then up to the interested researcher to use this verbatim information in tandem with the cataloging schemes of libraries or other repositories, perhaps with the assistance of librarians, to establish how those repositories may have cataloged the same item.

Pulling the Curtain Aside

GRAY LITERATURE is usually restricted to academic and political venues. In THE GRAND CANON, as we shall see, most of the gray literature appears in the environmental and geological subject areas. There is a very large proponent, too, issued from legislative branches of government, but which (as explained elsewhere in THE GRAND CANON) is probably severely undercited due to the sheer volume of material as yet unlocated; so this specific grouping will be overlooked as examples in this essay although the principles discussed here apply to it.

Furthermore, today’s increasing number of general publications that are produced “on demand” follow in the same vein as gray literature but will likewise be omitted from examples here. In brief, though, many of the on-demand publications do not display imprints as such; and as for place of publication certain central printing establishments, such as one in Lexington, Kentucky, produce works for many on-
demand publishers wherever those publishers may be located. In any case, that information is not contained in the publication. The documents may not have a copyright date, and the printer’s date will vary from “demand” to “demand”, too. This is becoming a perplexing problem bibliographically. *THE GRAND CANON* has accommodated some of these on-demand publications when they have been encountered, and the dates are those of the dates of printing, which thus far seem to represent (at least in the *THE GRAND CANON*’s citations) the earliest known occurrences. As time goes by, however, it will probably be prudent to cite only these earliest known dates regardless of the variations that may appear in the product (different cover illustrations, different pagination, and so forth); but making retrospective surveys may thus be impossible if the earliest dates are unknown. This is a problem that I have not addressed since keeping apace with new appearances of on-demand titles has not been too difficult thus far. We may yet have to discern in this special kind of gray literature a new kind of citation style, but this is a matter for the future.

The “murkiness” of the gray-literature nebula is the view from the perspective of the users of these documents—librarians and researchers. Surviving copies may be scarce to begin with, and they may be cataloged in different ways among libraries that do hold them. The problems of gray literature are neither shunned or glossed over by professionals; international conferences on the problems and issues of gray literature are held from time to time. And as a bibliographer I, too, have had to come to terms with the presence of these kinds of works, benefiting from the experiences of other researchers and librarians with whom I have worked when it comes to citing (and looking for) these productions.

In the late 1990s I wrote an essay (this one, in part) to include with what became the Internet Edition of *A Bibliography of the Grand Canyon and Lower Colorado River* ([www.grandcanyonbiblio.org](http://www.grandcanyonbiblio.org)), the predecessor to this one; but this and other introductory materials that I had hoped to use were not added to the online presence, an editorial decision imposed by website size and maintenance charges assessed by the website designer and host. A decade and a half later, I find that the essay not only still stands well by itself, but it now offers a contrasting perspective of the topics that it addresses. It views both an embryonic digital world of the 1990s and the present world that functions in a vastly more web-based fashion than it did even then. Many of the example citations were those that were known to me in the ‘90s; the fact that they are still relevant to the discussion makes it less necessary to force an updating of the essay to embrace “timely” citations from recent work. In reusing some of the text here I further recognize instructive lessons to be learned in the retention of
the older citations and the attempts to relocate them a decade and more later. And since the purpose of a bibliography is to record in context everything that has been done, this essay in support of the bibliography is partly historical, reflecting perspectives from a time when digitization and online resources were coming to the fore; partly a retrospective analysis of these views.

So, the greatest frustration addressed in this essay is the demise of accessible links to web-based resources. This comes as no surprise to a researcher, but these examples expose the uselessness of web citations in historiographical work. If one of the foundations of scholarly research is the citation of references, which one then may find for themselves to reassess or to continue on a new road of investigation, how then does one travel these avenues if the work is no longer available? In the examples I cite herein, using a web address (URL—Uniform Resource Locator) from the 1990s originally, I follow through with searches for the same material to illustrate the points that are raised here. In most cases, as one shall see, the information has been relocated; but it should not be the researcher’s job to hunt for the material yet again in spite of the useless URL. At best, web citations duplicate effort in the long run.

What, too, does this mean to those who created the work in the first place? And, will any copies, in whole or in part, survive somewhere? These are aspects that relate to what I have called “light gray literature”. Specifically, light gray literature comprises materials retrieved from online resources either in digital format or printed to paper, whether they represent the online resource in whole or in part. The medium is inconsequential; rather, the genre embodies a combination of the intentions of the document’s creators in posting the materials online, and the intentions of those who retrieve saved copies of that material in whole or in part. At the time of their acquisition (for whatever reason) these materials may be a researcher’s “Fair Use” reference copies, which clearly are available elsewhere. But in the future, this same material in one collection may then represent the sole surviving relics, in whole or in part, of digital material that is no longer extant. The challenge to an archivist or librarian of that day will be to ascertain whether it is material that is still accessible.

130 In the footnoted references that follow in this essay I retain the original URLs that were cited in the first draft of this essay, written in the late 1990s. Where URLs were shown in 2011 to be no longer valid, I searched for the same web-posted document or website via an online search; and where updated URLs were located I so indicate them. Of course, there is no assurance that these in turn will remain valid. Websites or documents that could not be relocated are so indicated.

elsewhere, presumably in a copyright-protected venue, or whether it is then a unique or exceedingly scarce resource worthy of retention with restrictions if copyright provisions are still in force. Eventually, all such material will fall into the public domain, which is reason enough to safeguard it should it be the only record of a work by an individual, institution, or agency. This is, after all, a loss through technological decay or mishap, probably unintended or unanticipated by the work’s creator.

I consider the genre of gray literature overall just as informationally useful as is traditionally published literature; much of it is plain facts and data that publishers would not find cost-effective in production and distribution through conventional channels. (Light gray literature does not come under the purview of *THE GRAND CANON*, although it will run as a current through research efforts conducted in the future; it will always be present.) There are as well problems in gray literature about the integrity and reliability of data, or biases, contained in the documents, often having not weathered the academic process of critical peer review; and for these reasons they are not always considered to be *bona fide* source materials for research. But this, too, is beyond the scope of the bibliography, whose purpose it is simply to document previous work and to provide the information by which it may be sought.

**The Gray Cat at Night**

*There is no* simple answer to the question, “What is gray literature?” There are probably dozens of definitions. ¹³² Most formal among them is a definition adopted in 1997 by the Third International Conference on Grey Literature, “The Luxembourg Convention on GL”, which defines gray literature as “That which is produced on all levels of government, academics, business and industry in print and electronic formats, but which is not controlled by commercial publishers.”¹³³ Unfortunately, this is a sanitized vision of the genre; it does not meet the complexities that produce so many problems in cataloguing (and citing) many different kinds of gray literature.

Like the proverbial gray cat at night, gray literature is hard to spot; it is difficult to find, and, when sighted, it is often described poorly. Topically they can appear in any venue; even “popular articles” such as those which are commercially published for the lay reader have been labelled as gray literature.¹³⁴ Some definitions of gray

---

literature exclude “nonstandard media” such as electronic documents even though in the decade since first citing this source electronic documents now fall under every acceptable aspect of publication and production, from formal to gray (and light gray).

Gray literature is simply problematical. It contains mostly useful information, but it is not distributed in channels usually used by libraries and individuals. It is difficult to obtain, hard to properly catalogue, often peculiarly cited because it is neither book nor serial, and, completing the cycle, hard to find using another person’s citation. While dutifully credited in an author’s list of references, gray literature frequently differs from conventional literature because it is thrown out to the reader without any help for finding it; the reader is left to his or her own wits to be as fortunate as was the author in getting hold of it. Sometimes, authors cite gray literature on the authority of other authors who have cited it. Of course, this scenario creates its own problems when the citation formats—and the information in them—change.

Despite problems, gray literature is hardly ignored as a subject of study. Numerous articles about it have been published, there are organizations which pursue its studies, problems and attempts to organize it, and there have been international symposia on the description and management of gray literature. Some libraries,

136 Some examples are:

A series of web pages that I had been able to identify only as “Soule and Ryan on Gray Literature”, which addressed topics on seven separate web pages, http://www.dtic.dla.mil/summit/tb07_1.html through tb07_7.html. [URLs no longer valid. The only web search that retrieved “Soule and Ryan on Gray Literature” in November 2011 was the brief web page http://www.rmarshall.net/Desktop/Second%20level%20index/Intelligence%20Sources/Grey_literature.htm.]
such as the National Oceanic and Atmospheric Administration (NOAA) Central Library, have a specific “Gray Literature Collection”; in NOAA’s case their holdings are restricted to this agency’s gray literature publications, which include “technical memoranda, reports, circulars, and in-house publications”. Others favor gray literature, such as the Demography Library in the Brown University Library, which “specializes in ‘gray literature, materials which are not readily or easily commercially available’”; in their case, examples are “Chinese census reports and Guatemalan population records”. The Science, Technology and Business Division of the Library of Congress has a special section, Technical Reports and Standards Special Collections; they note in introductory comments that among its technical reports on file is “an extensive collection of foreign technical reports and other ‘gray’ literature”, which seems to categorize as gray only the foreign materials in what otherwise is an

A web search “hit” on a posted email from the Rare Books and Special Collections Forum, exlibris@rutvm1.bitnet, which said only: “The Public Historian 15:2 (Spring 93) 63ff. has an article defining gray literature and 80 pages of reviews of instances of it.”

http://www.lib.noaa.gov/docs/unique.html [An attempt to reaccess this URL in November 2011 retrieved the following notice from the NOAA website: “The requested resource /docs/unique.html is no longer available on this server and there is no forwarding address. Please remove all references to this resource.” The library’s “Mission and History” webpage at this time did, however, notice briefly, “Gray Literature Collection: The NOAA Central Library has the most extensive collection of the agency’s gray literature publications. These publications include technical memoranda, reports, circulars, and in-house publications.” (http://www.lib.noaa.gov/about/mission.html, accessed 26 November 2011)]

There are many more examples from over a long period of time, and for just one view at random from the traditional, pre-digital literature see D. N. Wood, “The Collection, Bibliographic Control and Accessibility of Grey Literature”, IFLA Journal, Vol. 10 (1984), no. 3, pp. 278-282.

Patrick Moos, “In a Little-Known Library Lies a Nationally-Recognized Collection. Brown’s Demography Library Holds One of the Nation’s Preeminent Centers of Population Research”, The Brown Daily Herald, http://www.theherald.org/issues/111898/library.f.html. [The domain, theherald.org, is no longer valid. The newspaper’s newer web address http://www.browndailyherald.com/ no longer posts its back issues online.] The item referred to here was posted on a former version of The Brown Daily Herald website, which noted that the story originally appeared in the issue of Wednesday, November 18, 1998. As is virtually always the case with Internet-posted documents originally published in the print medium, a bibliographically proper citation cannot be made from it because it lacks page numbering of the original article; the resulting imprecision of locating quotations is at best unsettling. A related distasteful situation is the result of incomplete credits, where an author posts on a website what obviously is a previously published article but fails to fully credit its source.

area that already is widely regarded as being gray. The Owens Library at Northwest Missouri State University states that “Gray literature includes pamphlets from professional associations, information provided by nonprofit organizations, and technical papers created by scholars and shared among colleagues.”

Regardless of what is gray literature, being neither book nor serial and often lacking an imprint in the conventional categories of cataloguing, it also usually fails to fit the usual citation schemes. For gray literature, I have adopted a scheme of citation which captures all pertinent information that could be used to catalogue it, using as much of it as possible to create a citation in the format used by this bibliography, sometimes complexly or by appending spurious, perhaps useful, data as notes. In turn, the user searching for the item may have to work with librarians to establish just how a particular document may have been catalogued in their—or other—libraries.

Gray literature varies tremendously also in its outward appearance, and this seems to have a kind of subliminal influence on whether it is perceived as “legitimate” or “scholarly”. Some of it may be bound for durability and aesthetics; some may be held together by spiral wire, plastic combs, or heat-fused plastic strips; some of it may be drilled for use in loose-leaf binders; and some of it may be saddle-stitched, side-stapled (with or without taping around its “spine”, with or without separate cover leaves), or simply stapled in one corner. Some kinds of gray literature may be indistinguishable from memoranda; other kinds may be mistaken for books. (Readers may correctly make the point, too, that some of these descriptions can also be applied to some publications from commercial, scholastic, and private publishers, thus diffusing the distinction between conventional and gray literature.) There is no common denominator as to just what is a gray document other than the confusion it provides to all of the people who either must store it or find it again.

The advent of what once was called “table-top” publishing that arrived with the personal computer and printer, and the photocopier, expanded the volume of gray literature. Where before if it was not traditionally printed, it was reproduced by mimeograph or ditto machine, neither method efficient for large numbers of copies; now it can be economically and reliably run off by the thousands even without the outside help of commercial printers and business-copying franchises—although now pay attention to the burgeoning “on-demand” printing industry and the flock of authors who come into its fold, further graying the field of what is a “publication”.

---

Gray Literature in *THE GRAND CANON*

In this bibliography, gray literature largely includes scientific field guides produced for conventions and symposia, the results of ongoing or “final reports” of environmental or legislatively directed investigations, and all kinds of government documents that are not parts of regularly published series. Despite the label of “gray literature” I treat all of these as publications. I cannot any more look at gray literature as second-rate than I can privately published, self-distributed books, of which many are cited in *THE GRAND CANON*. The only screening process that I have applied is that the document must have been made available in multiple, identical copies, and made available to those who wish to have it (that is, “secret” or similar productions of government agencies would be excluded; then again, they would not likely be known to me anyway). Manuscripts and memoranda do not meet this criterion. Internet-posted publications are specifically excluded, too, because of the problems of assuring that they will always be available.

Even in the earliest stages of this bibliography, in the late 1970s, the gray literature citation was a pressing concern. Identifying just what it is was something I had to learn by doing, and only much later did I discover that in the past couple of decades it has become a widely recognized and studied concern of librarians, information specialists, and researchers. Where it was showing up in the literature seemed to have no direct bearing on its content or on its reliability; it was being cited for the most part “on the fly”; often, those who cited it seemed to have special sources for their material because it just was not showing up in the places I was turning to find it. Debachere called gray literature “a fuzzy set that is irregular and variable.”

She continued, “On the one hand, it spills over in areas that remain uncontrollable for a long time, such as meeting reports, associative publications, or even private publications, which are clearly in the confidential or private domain. On the other hand, it enters into published literature, the existence of which is hence known by libraries, such as the proceedings of meetings.”

This is not always as clear as it seems. There are the International Geological Congresses, major conventions which have met somewhere in the world about every four years since the 1880s. In one respect the congresses’ *Compte-Rendu* (when the standard meeting language was French) or the *Abstracts* or *Proceedings* (when the standard meeting language became English) are serials; they are usually easily found in a library’s catalogue, even if there is a cross-reference between the French and

---

English titles, “Congrès Géologique International” and “International Geological Congress”. Another example, a little less easy to find, is the Transactions and Proceedings Series of the U.S. National Park Service, irregular in date, which in turn encompasses many separately published volumes that can as well be catalogued by their individual titles; for example, the Proceedings of the Third Biennial Conference of Research on the Colorado Plateau, and which in turn can be located also by its informative but less used document number, “NPS/NRNAU/NRTP-97/12”.

Other meeting volumes are more problematical, such as Proceedings of the Fossils of Arizona Symposium, which not only is not periodic but its proceedings volume received very limited distribution. Indeed, the limited “press” run, and distribution primarily to those in attendance, automatically reduces the likelihood of its winding up, catalogued, in a library. Many libraries will balk at the prospect of taking in “donations” of such documents buried in the accumulata of researchers who either are cleaning their offices or from the effects of those who have died. Or then there is the instance of Colloque sur la Stratigraphie du Carbonifère held at the Université de Liège and published as volume 55 in its irregular series, “Les Congres et Colloques de l’Universite de Liege”. In each case, there are different key words that can be selected as the primary name for cataloguing.

The reader should try to locate in this bibliography these citations using the information given above. With the on-line searching functions of the Internet Edition and the digital format of THE GRAND CANON it will be relatively easy no matter what phrases are used. Imagine, then, the problems inherent in looking for these documents in a library catalogue whose cataloguing scheme, digital or not, may not well accommodate these kinds of documents. Imagine, too, finding these titles by handsearching in an old library’s card file. And what of those libraries who may have these materials, cataloged or not, but do not contribute to the globally available library catalogs online? These problems and a special example of “minimum cataloging” is outlined by Bichteler, who asks, “If the major research libraries don’t contribute cataloging records for gray literature to the networks, who will?”

Without quick and easy access to large segments of gray literature, users are relegated to the traditional grunt work of handsearching— I call it “browsing”—which for a long time yet may still be the most effective way. In fact, bibliographies such as the present one will

143 The term ”handsearching” was brought to my attention in “How Can I Participate?” in the Cochrane Collaboration, http://www.compmed.umc.ab.umd.edu/compmed/cochrane_collaboration/cmpart.htm. [Revised URL: http://www.cochrane.org/handbook/6221-handsearching (accessed 26 November 2011).]
compound the problem further, by providing references to gray documents, but cannot provide the means by which to let the user find them in libraries. The overall problem is not as extreme as it was even a decade ago thanks to the widespread advances of web resources, but the nuances of cataloging and retrieval remain.

In almost every case I met in this bibliography, gray literature was “non-conventional”, to use one phrase of description given to this kind of literature. But it is clear, in the context of this bibliography, that there are two main categories of gray literature beyond that of purely administrative documents: geological and environmental. The part of the bibliography on Administration is also filled with gray literature, but it should not come as a surprise that there should be so much of it in this category. There is a similarly obscure subset of archaeological literature, too, which fits the criteria of grayness, but much archaeological literature in turn is so-called “black literature”—classified—given its locality-sensitive content. (For discussion of the shades of informational categories, see in Stefik.) Such exclusionary literature cannot be cited here; it is superfluous to the research community because of restrictions on its availability.

Geological Gray Literature

Gray literature has long been a specifically peculiar problem among geologists because they are a much more socially- and geographically-integrated group. Lest one jump on this remark as being elitist, I will simply point out that, by far more than do other scientists, geologists routinely gather not only to meet and discuss, but also to conduct field excursions to places of special interest and problems. The field trip has been de rigueur in geology since the birth of modern geology in the 1700s (although in earlier times, even in ancient times, the field trip was often a solo endeavor by curious academics). Field trip guidebooks abound; included in them often are road logs with which other researchers can retrace the routes on their own. The accompanying explanatory texts and conjectural discussions will not likely be found anywhere else. Separate maps are sometimes a part of these documents, which are an entirely different problem to librarians and to those who wish to obtain photocopies or electronically derived copies; the problems are more magnified when these large,
folded maps are printed in color, which is less an aesthetic concern than it is a very specifically important way of conveying a great deal of geological information. All of these factors contribute to field trip guidebooks being “orphans”, which “may not be shelved or catalogued”\(^{147}\).

Ironically, these kinds of documents are sometimes superior to those which are more traditionally published either under the imprint of a recognized journal or national or international organization. Bichteler indicated specifically that “guidebooks are the best and most recent source of information of the geology of a very specific area, thus they are in high demand.”\(^{148}\) But with limited distribution, such as noted above, they fail to wind up in the repositories that can best serve those who need to find them. Bichteler also quoted Rosalind Walcott who depicted these “sneaky, fly-by-night, changecot publications [as] hard to identify, hard to acquire, hard to catalog and retrieve, and hard to preserve.”\(^{149}\) What neither of these authors noted is that, even when the contents of these kinds of publications are peer reviewed prior to publication, they also sometimes contain information which is purely conjectural, as a means of promoting discussion and as a defense of particular views of geology as researched in the field; more specifically, in the real-time environment of field trips, with the field guides serving as a syllabus. Some such articles, for example, appeared in the field trip guidebook for Colorado River trips through Grand Canyon sponsored by the 28th International Geological Congress.\(^{150}\)

Incidentally, the last-mentioned publication above was distributed in comb-bound volumes to members of the field trips, but was otherwise sold as perfect-bound books at the congress in Washington, D.C., and through the mail by the publisher, the American Geophysical Union. The perfect-bound version, although identical with the web millions of digitally scanned books, periodicals, and other catalogued documents, is not without its own problems of accessibility. Due to copyright concerns, some of these documents are not yet viewable online. Of those that are available, oversized pages (fold-outs and the like) are bypassed as part of the scanning process, a procedure that does not make the whole document available, forcing those who do need to see that passed-over material to find a real copy anyway.

comb-bound one in every respect, has the outward appearance and feel of a book that is more likely to be more properly maintained.

In related matter on gray literature from this geological congress, another volume (perfect-bound), limited to 300 copies, was prepared for these field trips by Spamer. It was distributed to the members of the field trip and afterwards sold by its producer, the Department of Malacology, Academy of Natural Sciences of Philadelphia, as part of its irregular “Miscellaneous Publications” series, *Tryonia*. But owing to problems of citing gray literature, it has since been variously cited as “Miscellaneous Publications” (of the department), “*Tryonia*”, and the adjunctive, invented series title (an administrative justification), “Contribution of the Invertebrate Paleontology Section, no. 1” (of which, incidentally, there has only been one). It would seem that the variations of typography, by which important and less-important information is displayed, is ignored in favor of “what seems to be” pertinent information based on the lines of text.

Geology does seem to stand out from other sciences in that there are more detailed discussions of work in progress, and more open sharing of information, than there are in other scientific fields. In 1964 there was a symposium in Flagstaff, Arizona, on the geological history of the Colorado River. Its proceedings volume offered brief analyses and commentaries stemming from the convocation, focusing on the history of the Colorado River in Arizona. Despite its having been published as part of the Museum of Northern Arizona’s *Bulletin* series, its relative scarcity made it seem in coming years as if it were part of the gray literature genre. In 2000 a second, formal symposium on the same subject was held at Grand Canyon; its proceedings volume was published by Grand Canyon Association as part of its *Monograph* series, not without its own hiccups in citation. Then in 2010 an informal follow-up workshop

---

153 Richard A. Young and Earle E. Spamer, eds., *Colorado River: Origin and Evolution: Proceedings of a Symposium Held at Grand Canyon National Park in June, 2000* (Grand Canyon, Arizona: Grand Canyon Association, 2001), 280 pp. (Grand Canyon Association, Monograph 12.) [The volume carries the copyright date 2001, and the Library of Congress cataloging date 2003, but was not released until July 2004. It has traditionally been cited with the 2001 date, which more closely reflects the date of the 2000 symposium, even though strict bibliographical applications focus on the actual publication date.]
was held in Flagstaff. Its abstracts, posted to a secure website, comprise both true gray literature and a prime candidate for light gray literature. The abstracts were in turn, some with revisions, produced for the Open-File series of the U.S. Geological Survey; but the document is available only on the web—again, both gray and light gray literature.

The kinds of geological gray literature which show up in great numbers in THE GRAND CANON as might be expected are those from the U.S. Geological Survey; specifically, its informal series, Open-File Reports. (State geological surveys also produce such on-file reports.) These are precisely what the name says: they are not part of traditional publication series such as the USGS’s Bulletin and Professional Paper series—or even the formally published map series, Miscellaneous Investigations. The Open-File Reports are reports of field investigations, whether texts, maps, or both, which are on file and are reproduced either in small quantities or on an as-needed basis. Such publication on demand is driven by economic concerns, and indeed, as one moves from the more financially flush period before the 1970s to the present, the number of such documents increases tremendously. Fortunately, the USGS distribution network is easy to access, and these documents are no more harder to obtain than are the principal series, the exception being that the oldest such materials are not included and must be sought out the old-fashioned way, by hunting, with help, and occasionally with luck.

Many of the USGS Open-File Reports cited in THE GRAND CANON are maps. Again, geology is a very geographically- and visually-oriented field of science, and the geologic map is a unique way to convey a great deal of information. With some maps, geologists can also derive a three-dimensional image of geological structure in a region. This is admittedly a means of communication specific to geologists, but one so important that it demands its own section in THE GRAND CANON. Map data are now being made available in electronic formats, with which maps can be produced by the user, if the user has the appropriate equipment. There will for a long time yet still be a need for

157 George H. Billingsley and Haydee M. Hampton, “Physiographic Rim of the Grand Canyon, Arizona”,

---
the large, paper map, and the only economic way of making it available will be to “open-file it”; and today that means in digital format. It should be noted that until the advent of digital production such maps were not usually produced in color; increasingly, only those which have been preapproved for publication in one of many formal map-publication categories are published in colors.

Environmental and Administrative Gray Literature

Environmental studies embrace a hugely diverse number of topics, ranging from organismal biology to physical and chemical aspects of waters and the atmosphere. So often the organismal and other studies are interrelated that I group them together in this discussion, but I segregate them in the topical parts of the bibliography in response to researchers’ needs.

In the Grand Canyon region, as well as everywhere, environmental studies have shifted from individual and institutional initiatives to programs of research that are administratively managed by legislative or judicial mandate or with the official sanction of government oversight agencies (for example, the National Park Service). Comprehensive results of scientific research are being recorded and publicly distributed in summary reports and environmental impact statements, while the traditional scholarly journals usually publish more focused aspects of research.

Modern administrative directives provide for meticulously documented studies of the predicted impact that changes to the landscape or its use will have on the quality of the environment and the impacts such changes may have on human endeavors. This has created a bewildering panalopy of documents—preliminary, final, and revised—that provide administrative direction and remedial courses of action in response to a multitude of implementary scenarios. These documents also provide all kinds of environmental data that not only provide the basis for making evaluations, but also capture present conditions for many aspects of the environment.

U.S. Geological Survey, Open-File Report 99-30 (1999), 1 sheet, scale 1:250,000, and digital database as ARC/INFO export files. [The URL cited in the original essay as edited in 1999 was http://wrgis.wr.usgs.gov; a paper copy of the map could be ordered from the USGS. Today the map is available only as a downloadable PDF file, http://wrgis.wr.usgs.gov/open-file/of99-30/gc.pdf (accessed 26 November 2011); the digital data with which it was created are still accessible, through the index page http://wrgis.wr.usgs.gov/open-file/of99-30/).] [N.B.: This map is also reproduced (reduced significantly to page size) herein, in the introductory section on “Geographical Coverage”.]
Management documents within the gray-literature genre can range from the aesthetic qualities of “quiet” in the national park, as impacted by low aircraft overflights or outboard motors on the Colorado River, to the impact of human visitation of historic sites on breeding populations of bats. Other documents address concerns usually beyond the immediate notice of the park visitor; for example, sewage management.

Present concerns in the national park relate to environmental aesthetics such as natural quiet and to such problems of visitation as overcrowding. (When this essay was first written more than a decade ago, these were current concerns; they still are.) There are a great many articles that pertain to these issues, and they increase in number; a variety of plans are in the process of implementation or under study. These include all kinds of Environmental Assessment documents, Management Plans, Findings of No Significant Impact, Records of Decision, and so forth. These documents may be released separately as a matter of public record (such as those cited above), publicly posted as a matter of legal announcements in the Federal Register, or

160 U.S. National Park Service (Grand Canyon National Park), Colorado River Management Plan; December 1979 (U.S. National Park Service, Grand Canyon National Park), separately paginated sections.

161 U.S. National Park Service, [Grand Canyon National Park], Draft Environmental Assessment; Bat Cave Restoration, Grand Canyon National Park (no imprint), 8 pp. [Author determined through other sources: Kim Crumbo.]

163 John L. England, “Endangered and Threatened Wildlife and Plants; Final Rule to List the Kanab
formally published in a book that is intended to serve as research documentation of the evaluation process\textsuperscript{164}.

Interestingly, research conclusions published under a formal imprint such as the National Academy Press would otherwise be considered gray literature without the imprint. This book is perfect-bound, has the appearance of a book, and is available by purchase from the publisher. On the other hand, a similarly crafted book\textsuperscript{165} is as well documented and produced, but it lacks an imprint and is available from the Commission (upon request without charge) or from the National Technical Information Service (with a charge). The overall purpose of each product is the same, but the cachet of a well known publisher, even if it is the publications arm of the National Academy of Sciences, seems to elevate such documents from the category of gray literature.

By and large, the majority of environmental gray literature is that of government agencies. It is therefore easy to make the assumption that most of these documents will also have peculiarly segmented citations, reflecting the arrangement of pertinent information on the cover pages of these documents, that the authorship credit may be to a confoundingly bureaucratic string of commissions and committees, and that titularly similar documents may exist.\textsuperscript{166} This is not always the case. One of

\textit{Ambersnail as Endangered}, \textit{Federal Register}, Vol. 57, no. 75 (April 17, 1990), pp. 13657-13661.

\textsuperscript{164} U.S. National Research Council (Commission on Physical Sciences, Mathematics, and Resources, Water Science and Technology Board, Committee to Review the Glen Canyon Environmental Studies), \textit{River and Dam Management. A Review of the Bureau of Reclamation's Glen Canyon Environmental Studies} (National Academy Press, Washington, D.C., 1987), 203 pp. [\textit{N.B.:} This book also includes a list of documents reviewed by the committee (Appendix A, pp. 127-140) which includes some miscellaneous reports of the Glen Canyon Environmental Studies.]

the most important gray literature documents of recent years for the region of interest here is the General Management Plan and Environmental Impact Statement for Grand Canyon National Park. Not only is the topic of great significance to the administration of the national park and the public’s use of the lands, but the documents themselves, while having concise information on their cover sheets, are samples of nearly everything that makes them difficult to catalogue and cite.

The Draft General Management Plan and Environmental Impact Statement (GMP–EIS)\textsuperscript{167} was published as a wide, greatly detailed, oversized (11 × 17 inches) wire spiral-bound document. The Final General Management Plan and Environmental Impact Statement\textsuperscript{168}, instead of reprinting this cumbersome document as a revised and updated edition, simply listed by line number all the revisions to be applied to the Draft GMP; it is printed on conventionally sized paper (8½ × 11 inches) with cardboard covers, side-stapled with three heavy-duty staples. Libraries may store these two documents in separate places because of the differences in size and binding and because they were received at different times, possibly even because of their strikingly different format. An author who cites just the Final GMP does a disservice to all those who need to examine the document because the Draft GMP is, unusually, a part of the final documentation. The Final GMP refers specifically to the Draft GMP, and the two must be used together. This relationship may not be caught in cataloguing the Final GMP, and it is feasible, too, that the Draft GMP could be discarded in favor of the “final” version by a less attentive librarian.

Other gray-literature documents are workshop proceedings. These are most likely to be among the most confusing to catalogue because the cover data are not necessarily easily categorized. One example of a problematical citation from a workshop proceedings adds the peculiarity of an unconventional authorship. This example fails to clearly identify the issuing agency, avoids listing authors by name but instead lists them by their titles and functions, and carries the date it was prepared as well as the date it was distributed. Some of the data are interpreted from other evidence in the volume. The user can thus see just how differently this citation can be listed in references and how many different ways there can be to catalogue it. On the other hand, some such workshop proceedings are much more clearly cited, thus they will be likely to be found more quickly in a catalog.

The Glen Canyon Environmental Studies, in fact, probably produced the most wide-ranging group of gray literature and conventional literature combined. It was an important research program, conducted in phases over two decades, embracing physical, biological, and environmental sciences, archaeological surveys, and issues of concern to Native Americans and recreational industries, and socio-economic studies. A first comprehensive overview was compiled by the U.S. National Research Council, but the studies continued for another decade to culminate in an Environmental Impact Statement for the operation of Glen Canyon Dam. The amount of conventionally published research and discussion on GCES-related topics is tremendous. But so much exists just among preliminary and final reports from principal investigators, filed with GCES, that it has been worthwhile to include in THE

169 Glen Canyon Environmental Studies Senior Scientist, Glen Canyon Environmental Studies Program Manager, and a small group of scientific experts, "Interim Flows for Grand Canyon; Recommendations for Interim Operating Procedures for Glen Canyon Dam", separately paginated section in Long-Term Monitoring Workshop for the Grand Canyon, October 5-6, Irvine, California (National Research Council, Water Science and Technology Board, 1992), 19 pp. [Document dated 1991, prepared for U.S. Bureau of Reclamation and GCES cooperating agencies, from Center for Environmental Studies, Arizona State University.]

**Conclusion**

That the formulated citations of *The Grand Canon* are so broken up by “less tidy” citations of gray literature is testimony to the pervasive and persuasive importance of such products to these areas of study. One can get a feel for it just by browsing the bibliography, particularly in the sections on Administration, Environment, and Geology. I hope that the very few examples in this discussion show the reader that no bibliography can adequately cover the gigantic volume of material that can be found only in the most specialized and comprehensive collections, personal and institutional; though it may try. To find it all would be a prodigious task, one calling for the extended periods of time of many capable searchers. I hope, too, that the examples that do appear throughout *The Grand Canon* bring to light the problems of something even as simple as citing gray literature, that even the most capable of bibliographers will resort to invention; the same, too, with other researchers when they cite these items. This is what makes bibliography both art and science—not to mention the fixation of “inspired idiots”.

The German visitors to the Grand Canon this week, reported on their return that they saw more than they expected, in fact the scenery at the Canon can be ranked among the most beautiful in nature’s category. They spoke in the highest terms of the courtesies extended to them during their journey and at the Canon, by Messrs. Farlee & Young. The following are the names of the gentlemen composing the party: Dr. Edward Lasker, Imperial German parliament, Berlin. Dr. Paul Linden, Berlin; Dr. George Siemens, director German bank, Berlin; Herr Theodore Spaeth privy councillor, Speyer; Herr Adolph Froehlich, bank president, Rweibrucken; Dr. Richard Oberlander, editor Welt Post and special correspondent Frankfort Zeitung, Lepsic; Herr Udo Brachvogel, editor N. Y. Bellerishtiches Journal and special correspondent Ueber Land and Meer, New York; Mr. Jur. Ernst Magnus, Breslau, Dr. Med. Paul Waltskeh, Darmstadt; Herr Frederick Hess, proprietor California Democrat, San Francisco; C. B. Schmidt, commissioner emigration A. T. & S. F.; W. A. Holabird, tourist agent A. T. & S. F.

(Volume 1, No. 4, p. 3)

Quite a large number of strangers have visited our town this week, the most of them taking the trip to the Grand Canon.

(Volume 1, No. 5, p. 3)

In just a decade since John Wesley Powell’s expeditions on the Colorado River, the Grand Canyon at Diamond Creek was already an international destination.

CANON
THE BIBLIOGRAPHY
“[One] forgets that the human mind itself is of small capacity and receives its impressions slowly, by labored processes of comparison.”

One of the pitfalls of a four–decade, single–author project — despite of the number of dedicated and reliable people who have faithfully contributed to it — is that vigilant users are bound to notice that one work or another has been overlooked. There are good reasons for omissions: I do not know about them, or it was not obvious to me that they belong here. The user thus has the advantage over me. Please send the citations, as well as any corrections.

With thanks,

Earle Spamer

GrandCanyonBiblio@earthlink.net
The frontispieces that face off each part of the bibliography are added principally for their general interest, occasionally for entertainment. The illustrations have been chosen to sidestep many of the worn-in items that have been so often used to portray the Grand Canyon and Colorado River, or at least to put new faces on a few that are familiar. Some of them focus on details rather than an oft-repeated whole. In some fashion each frontispiece has some historical reflection on that part of the bibliography, cast sometimes whimsically, ironically or symbolically. Historical elements touching on other parts of the bibliography may also be introduced, either among the illustrations or in the accompanying legends. They may lead to other things within the bibliography; in so doing they encourage the reader to further explore the content of this work. In sum the frontispieces portray the topical breadth and interpretive depth of THE GRAND CANON.

Describes the scope and content of each part of the bibliography

The “Part Number” (subject area) of THE GRAND CANON is attached to all citations as the prefix in each unique “Item number”. This number conveys information about the general subject area of the citation so listed. For example, “Item number” 14.125 is item number 125 within Part 14 (Human Affairs). Each part of the bibliography is separately enumerated. (See “Item Numbers” elsewhere herein for a fuller description.)

Online, each part of the bibliography may also be browsed by selecting the part number in the dropdown box on the search screen and leaving all other fields (except the default end-date field) blank. The entire content of that part of the bibliography will then be displayed in alphabetical order by author(s), and then chronologically within like items.

Information for each part is also repeated at the beginning of that part of the bibliography.

## Part No. 1: Bibliographies, Indices and Related Works

### Bibliographies, indices and related works that include the Grand Canyon or the lower Colorado River region

Every bibliography and reference list has its good and bad points; each is designed to serve a different purpose and audience. The citations listed here are those that relate directly to the Grand Canyon and lower Colorado River, or which include sufficient references on the region to make them a valuable supplementary or alternate contemporary resource to *The Grand Canon*. Some bibliographies also extend their coverage beyond the limits of the *The Grand Canon*. 
### General and Special-Interest Subjects

<th>General, Historical, Biographical, and Popular Publications</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>General and popular works, including history, regional geography, non-fictional literature, and biographical material, relating to the Grand Canyon or the lower Colorado River corridor between Glen Canyon Dam, Arizona, and the Colorado River delta in Mexico</td>
</tr>
</tbody>
</table>

This section includes all literature that broadly addresses the Grand Canyon-lower Colorado River region as well as literature specifically focused on this region or a part of it. It includes material written for a popular audience as well as scholarly publications that deal at least in part with the Grand Canyon or the lower Colorado River. General environmental publications, as opposed to those that are more technical or administrative in nature, are included in this part of the bibliography. Material that may otherwise be arbitrarily classified as "Miscellaneous" is also in this part. Travel literature that is more travelogue in presentation is included in this part, but travel publications that are incremental guides to attractions and informational guides to accommodations and services will be found in Part 9. Travel Guides.
| 3 | **The New York Times**  
   p. 1829 | Grand Canyon and lower Colorado River articles and reports in *The New York Times* from 1851  
   | | *The New York Times* has been widely available on microfilm, and now in digital format. Its comprehensive and authoritative editorial view of national affairs, as well as its traditionally well-respected writing, makes it a useful resource on national perspectives of events and issues in the Southwest. The longevity of this newspaper also allows it to serve as a Grand Canyon–Colorado River bibliography back to the time of the first expeditions through what would be Arizona, by Lorenzo Sitgreaves (1851), and on the Colorado by Joseph C. Ives (1857-1858) and John Wesley Powell (1869). |
| 4 | **Memorials**  
   p. 1923 | Necrologies, obituary notices, and similar biographical memorials that refer to the Grand Canyon and lower Colorado River  
   | | This part lists only obituary notices and commemorative or retrospective memorials, listed by author. Such sketches are cited here only if the citationist refers to the Grand Canyon or the Colorado River. Obituary notices and memorials upon the death of a person are listed here. A few pertinent miscellaneous biographical sketches of prominent persons in the history of the area are also included. Traditional biographies as books and articles are listed in Part 2.  
   General Publications. |
| 5 | **Media for Vision-Impaired Users**  
   p. 1955 | Works or references produced especially for vision-impaired people  
   | | This section includes tactile, visual, and audio products prepared for individuals with functional handicaps that make viewing difficult or impossible. A few citations are print items that relate to products for the vision-impaired. Many citations are from the Library of Congress Information System. Dates given may be either for the recording production date or for the printed volume; given as cited. |
| 6 | **Works For and By Youth**  
   p. 1975 | Non-fiction and fiction for young and adolescent audiences that includes the Grand Canyon or the lower Colorado River, including works created by younger authors  
   | | This part includes all those works traditionally referred to as “juvenile”; it includes works that also are appropriate for “young adult” audiences. Both non-fiction and fiction are grouped together in order to provide complete, contiguous coverage in this special literary genre. If the context of the title does not clearly indicate whether the item is fiction or non-fiction, a notation is appended to explain it. Also included here are works created by younger authors. |
| 7 | **Fiction**  
   p. 2047 | Fiction for adult audiences that includes the Grand Canyon or the lower Colorado River  
<p>| | This part lists only works of fiction, including folklore. However, special-interest subjects that can be considered by many to be works of fiction—such as those relating to UFOs and Creationist topics—are considered to belong either to “general” subjects or to the specific subject to which it purports to belong (e.g. Geology). |</p>

Lower Colorado River Region Special Interest Subjects

See the map herein that delineates the region labeled here as “Lower Colorado River”

| 11 | Lower Colorado River Region—Natural History, Environment and Special Issues p. 2243 | Natural history, environment, and geography specifically about the lower Colorado River corridor below Grand Canyon — Lake Mead, Arizona–Nevada, to the Colorado River delta in Mexico |

This part includes only those references about all disciplines of natural history (geological and biological), environment, and geography, topically restricted to the region along the lower Colorado River corridor, from Lake Mead to the delta. It includes hydrologic investigations of the river-proper, as limited to this reach, including studies of that part of Lake Mead that has inundated the lower Grand Canyon. Selected archaeological and early ethnological investigations of the river corridor are also included. This part also lists natural history and environmental studies related to the Salton Sea area. Water-quality and health issues relating to the waters of the lower Colorado River, below Grand Canyon, are also included.
### Lower Colorado River Region—Water Management

**p. 2549**

Engineering projects, water management issues, and related topics in the Colorado River corridor below Grand Canyon — from Lake Mead, Arizona–Nevada, through the Arizona–Nevada–California corridor to the Colorado River delta in Baja California–Sonora, Mexico — and proposed and existing engineering projects in the Grand Canyon

This part includes all references that deal with the dams and their appurtenant structures, and water-control procedures and facilities in the lower Colorado River, from Lake Mead to the delta. Material not pertaining to water-management issue per se but directly related to the management of structures are also included. Some legal issues relating to the Law of the River and similar administrative considerations are included in this part. Also included are documents related to irrigation, flood-control measures, and human-controlled water supply in the lower Colorado River; among them are project-specific documents and articles about the accidental Colorado River breakout and the inundation of the Salton sink during the first decade of the 20th century. Further included in this part are items relating to administrative attention to water supply in the lower Colorado River, water apportionment to political entities in the Southwest, and constructions relating to the execution of water control and distribution. General commentaries on water management in the region are also included. Selected items pertaining to the construction of Glen Canyon Dam may also be found in this part.

As a means to accommodate the literature on proposed dams and diversion structures in Grand Canyon and Marble Canyon, but which were never constructed, documents relating to them are included in this part, as also being in the Lower Basin of the Colorado River.

Certain selected items that relate to the area, conditions and operation of Glen Canyon Dam will be found in appropriate other categories, depending upon whether the subject is related to, for example, administration, physical ecology, biological ecology, geology, or general interest.

</table>

This part comprises items broadly relating to the administration of the national park and earlier administratively sectioned lands. This part lists more than documents pertaining to bureaucratic procedures and regulations. Included here are references that pertain to land use practices affecting politically defined unit; some items relating to historic structures; management documents derived from environmental studies on public lands, or official commentary on studies and policies; public comments on, and responses to, proposed and implemented studies and management decisions; and general articles and published opinions that relate to legislative issues affecting the protection, operation, and public use of the lands of the political unit. Also included are some items that pertain to cession of sovereign territories and boundary issues that historically pertain to the Grand Canyon-lower Colorado River region.

This part lists analytical studies and reports that relate to socio-economic concerns, including visitor appreciation and social “quality of wilderness” studies, and items pertaining to teaching and program instruction about the human and natural history of the Grand Canyon and Colorado River. Also included here are items relating to community issues of human health.
| 15 | Health and Safety  
   p. 3135 | Issues relating to human health and safety in the Grand Canyon or on the Colorado River through the Grand Canyon and in Lake Mead, and selected citations relating to the lower Colorado River | This part lists items relating to human health and safety in the national park and immediate vicinity, and selected works pertaining to the lower Colorado River. It also includes documents on accident investigations. |
| 16 | Archaeology and Cultural Preservation  
   p. 3199 | Archaeological history and research in the Grand Canyon region, including historical and cultural archaeology of 16th- to 20th-century activities | This part includes items that relate to archaeological surveys and studies of human remains, artifacts, and cultures during the period from early human inhabitation of the Grand Canyon region to recent historical activities of the 16th to 20th centuries. |
| 17 | Native Americans  
   p. 3281 | Native Americans of the Grand Canyon and issues concerning Native American culture and activities that relate to the canyon, the Colorado River, and the national park | This part includes all documents that pertain to the Havasupai and Hualapai tribes, traditional residents of the Grand Canyon, including social and other concerns of these tribes. Other Native American tribes are included in this part only with respect to their activities in the Grand Canyon or with respect to the canyon in their heritage. Items relating to tribal cultural claims to the Colorado River are also included. |
### Science in the Grand Canyon Region

<td>Physical, chemical, biophysical, or biochemical aspects of land, water, and atmospheric environments; overviews of principally non-biologically focused research of the environment and conservation; and multi-disciplinary or methodological environmental research and findings not based principally on organismal research; all relating to the Grand Canyon region and the Colorado River corridor through the Grand Canyon</td>
<td></td>
</tr>
<tr>
<td>19</td>
<td>Studies of organismal biology, biological ecology, and modeling and research applications relating to biological communities in the Grand Canyon ecoregion including the Colorado River corridor through the Grand Canyon; and general items relating to organismal resources in the region</td>
<td></td>
</tr>
</tbody>
</table>

This part includes ecological studies that are not organically specific, and environmental studies that have been part of scientific investigations conducted for the purpose of environmental management of public lands in the Grand Canyon region, including studies of climatological influences on water supply. Multidisciplinary studies of environmental and direct human impacts together in the Colorado River corridor are included in this section. This part also includes general articles that pertain to general environmental issues in the Grand Canyon region.

This part includes documents on biological censuses and the biology and ecology of animal, plant, and protist organisms occurring in the Grand Canyon. This part also includes biological reports and studies that have been part of scientific investigations conducted for the purpose of environmental management of public lands in the Grand Canyon region. Also included here are general articles about organismal-related information and resources; for example, fishing, hunting, and conservation.
| 20 | “Glen Canyon Environmental Studies” Program p. 3903 | The Glen Canyon Environmental Studies (GCES) were created to perform as an interagency body under the direction of the U.S. Department of the Interior, Bureau of Reclamation. It responded to a Congressional mandate to develop an Environmental Impact Statement on the effects of hydropower production at Glen Canyon Dam on the Colorado River and its riparian community downstream through lower Glen Canyon and the Grand Canyon. The EIS also examined the potential impacts of management decisions on social and economic issues. The GCES went through two phases, and the EIS was completed in 1995. The GCES was such an important part of the scientific and cultural study of the Grand Canyon, specifically in the previously little-studied Colorado River corridor, that the products of these studies are a bibliography in their own right. Many of the documents are interdisciplinary, thus also a justification for listing them separately, rather than in several places throughout this bibliography. Historians of science will also notice in this list that some of the subjects were reported in other scientific publications. A few of the reports were also released in their entirety as U.S. Geological Survey Open-File Reports or publications of the National Academy Press; these are itemized here. Most of the reports listed here, and voluminous supporting data, are archived at the Grand Canyon Monitoring and Research Center, Flagstaff, Arizona. Complete information for this list is still being compiled. Enumerated entries following the sequence for this bibliography do not necessarily pertain to individual reports; some refer to study groups, various reports of which are archived. |

Glen Canyon Environmental Studies program technical reports and related documents produced under the monitoring and research programs of the Glen Canyon Dam Environmental Impact Statement as mandated by Congress

[This section is no longer updated, the GCES program having ended.]

In the bibliography viewed online, these citations are viewed in a flat file; they are not part of the searchable component of the bibliography. Strings are searchable in the present document, as viewed in a word processor.
| 21 | Geology and Paleontology  
p. 3927 | Geology and paleontology of the Grand Canyon region, including extralimital studies of the continuity of Grand Canyon strata, regional structure and tectonics, regional groundwater hydrology (excludes hydrogeology of the Colorado River), and the geological history of the Colorado River. This part includes works about the geology and paleontology of the Grand Canyon (excluding the hydrogeologic regime of the Colorado River), studies of Grand Canyon rock units and their stratigraphic continuity beyond the canyon-proper, studies of the structure and tectonics of southwestern North America where embracing the Grand Canyon region, historical investigations of the Cenozoic evolution of the Grand Canyon and the lower Colorado River, modern groundwater studies of the region, and general reports on mapping in the region. Some works relating to physical geography are also included here. |
| 22 | Hydrogeology of the Colorado River  
p. 4519 | Hydrogeology of the Colorado River and some tributary surface waters in the Grand Canyon — including hydraulic investigations of the river, sedimentary studies in the river corridor, surface-water resources of the Colorado River mainstem below Glen Canyon Dam. This part encompasses all physical studies of the water flow (hydrology) of the Colorado River, applied research on its carried and bottom sediment, and the effects of the river's fluctuating flow on the distribution of sediment on the banks of the river. Includes hydrogeological investigations in Glen Canyon National Recreation Area below Glen Canyon Dam. |

</tbody>
</table>
### Audio Works and Musical Scores

**Audio Works and Musical Scores**

Audio works (reading and musical) — audio tapes, analog recordings, and audio-only digital disks (CDs, DVDs, etc.)—relating to the Grand Canyon or the lower Colorado River, and orchestral and other musical scores

This part lists audio recordings (reading and musical) and printed musical scores. Resources available only online are not included.

"Record" is an analog sound recording, or "phonodisc"; 78 rpm (revolutions per minute) format is on 10-inch plastic disks, 45 rpm format is on 7-inch plastic disks, and 33_3/4 rpm format is on 12-inch plastic disks. For tape speeds, ips = inches per second. Except for certain items especially identified to the artist or to the composer of musical works, names of producing agencies are used in the author field. Playing times are given in minutes:seconds.

### Miscellaneous Imagery

**Miscellaneous Imagery**

Miscellaneous art works and photographs that are not illustrative material in works of general, historical, literary, or biographical interest, but appear by themselves with or without legend

This section includes only single, extraneous items; for example, a reproduction of a single painting, or folios containing prints only, without accompanying text other than the legend. Photographs within articles or books that are credited to specific people or sources are not listed separately in this bibliography.

### Computer and Interactive Media

**Computer and Interactive Media**

Computer media and digital interactive media such as for personal-pad devices that include the Grand Canyon or the lower Colorado River

This section includes items that were released only in a computer-readable format, or in both hardcopy format accompanied by computer-readable versions or additional data in computerized format. Also included are announcements and similar items regarding media that are designed for digital personal-pad products such as iPhone, iPad, iPod Touch, or Android [some products as of 2012]. Further included here are articles that may explain how certain computerized media were created. Web-based media are excluded from this bibliography due to the likelihood of individual products being inaccessible in the future. Personal (hand-held) media such as Kindle editions of books are likewise excluded because of their narrowly restrictive limitations to proprietary products and inconsistent data on provenance and availability.

<th>Newspaper Guide</th>
<th>Brief guide to newspaper titles of the Grand Canyon region (and a supplemental list for Yuma, Arizona)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>p. 4961</td>
<td>Newspapers are a valuable resource to the historian. Long-running papers of any town or city are important historical documents, but researchers who bask in the thrill of finding the obscure and unusual anecdote, small-town and out-of-print newspapers are a mine of information.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>This list of newspapers does not imply that it is exhaustive, nor is there any guarantee that all of them have had coverage of events or people of the immediate Grand Canyon or lower Colorado River regions. But within these regions it is likely that newspapers published there have had a higher frequency of Canyon- and River-related items than the newspapers of more distant places. This list provides a sampling of newspapers of northern Arizona, southern Nevada, and southern Utah. A special supplement to the Arizona list includes newspapers of that intersection of the far Southwest, Yuma.</td>
</tr>
</tbody>
</table>

In the bibliography viewed online, these citations are viewed in a flat file; they are not part of the searchable component of the bibliography. Strings are searchable in the present document, as viewed in a word processor.
| 32 | Marginalia p. 4977 | Items not about the Grand Canyon but having a Grand Canyon venue or otherwise borrowing the name “Grand Canyon”, and items utilizing the Grand Canyon in non-metaphorical senses |

This part contains citations which are themselves not about the Grand Canyon but refer to the Grand Canyon as a venue—for example, meetings and conferences about subjects other than the Canyon held at Grand Canyon—or as a projected destination, without certainty that the parties involved do actually reach the Grand Canyon. While these citations do not specifically contain information about the Canyon, that they took place there, or intended to take place there, makes them peripherally a part of the history of the Canyon. Also included here are some similarly marginal references to nearby Grand Canyon locales, which are embraced within this bibliography.

Regarding Parts 33 and 34, which are no longer a part of THE GRAND CANON compilation, see separate comments in the “Coverage and Format” section of the introductory notes.
BIBLIOGRAPHICALLY RELATED WORKS
The purpose of all bibliographies is to document work, whether that of individuals, institutions, or agencies. The earliest known written record of the Grand Canyon was as a result of the official activities of a foreign government, a colonial Spanish expeditionary force in New Spain. A contingent of this army, about thirteen men under García López de Cárdenas, was led by Hopi guides in 1540 to the southern part of the canyon rim. Three of them – Pablo de Melgosa, Juan Galeros, and a third whose name is not recorded – attempted to descend to the Colorado River but failed, the vast proportions of the canyon having been greatly underestimated. The account was not written down until 1563 probably, retranscribed in 1596, and not published in either the original Spanish or in English translation until 1896 (the original is lost). The facsimile above depicts the Spanish transcription published by George Parker Winship in 1896.

See also overleaf of title-sheet for this Part
BIBLIOGRAPHIES, INDICES AND RELATED WORKS

Bibliographies, indices and related works that include the Grand Canyon or the lower Colorado River region

Every bibliography and reference list has its good and bad points; each is designed to serve a different purpose and audience. The citations given here are those which relate directly to the Grand Canyon and lower Colorado River, or which include sufficient references on the region to make them a valuable supplementary or alternate contemporary resource to *THE GRAND CANON*. Other bibliographies also extend their coverage beyond the limits of *THE GRAND CANON*. 
BIBLIOGRAPHY OF THE GRAND CANYON REGION

"Relacion de la Jornada de Cibola Compuesta por Pedro de Castañeda de Naçera." The original of this narrative is in the Lenox Library, New York. A fine translation, with critical notes, by George Parker Winship, is in the Fourteenth Annual Report of the Bureau of Ethnology.

"The Journeyings of F. Francisco Silvestre Velez Escalante from Santa Fé to Utah Lake," etc. In Simpson's "Across the Great Basin in 1829."

"Military Reconnaissance from Ft. Leavensworth to San Diego, by Lieutenant-Colonel W. H. Emory.

The earliest published bibliography compiled specifically for the Grand Canyon region appeared in George Wharton James's In and Around the Grand Canyon (Little, Brown, and Co., Boston, 1900). Above is shown the first page of this haphazard compilation.

Opening Screen

A Bibliography of the Grand Canyon and Lower Colorado River

Compiled and edited by Dale E. Stansel

The bibliography lists 45321 items produced between 1540 and the present. It includes books, periodicals, serials, maps, audiovisual works, and electronic media in 34 subject areas. Coverage includes the Grand Canyon of Arizona and the Lower Colorado River corridor between Glen Canyon Dam, Arizona, and the Colorado River delta in Mexico. Greatly expanded and revised from earlier editions published by Grand Canyon Natural History Association.

[Internet Edition]

Search Screen

(image captured in August 2011; basic layout unchanged since 2000, but information on keyword searches added later)
The following table of contents for the Internet Edition of the bibliography was copied from the web page online in 2011. It is largely unchanged from its first presentation in January 2000 and was arranged by a former website provider for Grand Canyon Association.

Compare this presentation to that for THE GRAND CANON (see contents) to ascertain further changes that have been made to part titles and descriptions; but most notably, the removal of Parts 33 and 34, about which:

Part 33—"Other" Grand Canyons is no longer updated and is not included in THE GRAND CANON. That part, which tracked uses of "Grand Canyon" in other geographical locales, was removed as a matter of pragmatic bibliography, not truly pertaining to the Grand Canyon except through nomenclature and comparison, analogy, and metaphor. These separately lists are now appended to THE GRAND CANON as literary compilations but otherwise they stand independently of the overall bibliography.

Part 34—Miscellaneous Manuscripts was removed from this version of the bibliography in November 2003; it was also removed from the Internet Edition online. Originally, I had believed it was prudent to include manuscript materials that were cited by other sources, in order to include those records in the bibliography. However, this is not the purpose of the bibliography; tracking manuscript and other primary source materials is an entirely separate project, one for someone else to pursue.

All hyperlink indicators in blue are inactive. The text was captured from online screens.
TABLE OF CONTENTS

To search the full bibliography, go to the search screen. The links below will allow you to search individual portions of the bibliography.

BIBLIOGRAPHIES AND INDICES

1. BIBLIOGRAPHIES
Bibliographies and indices that include the Grand Canyon or the lower Colorado River region

Every bibliography and reference list has its good and bad points; each is designed to serve a different purpose and audience. The citations given here are those which relate directly to the Grand Canyon and lower Colorado River, or which include sufficient references on the region to make them a valuable supplementary or alternate contemporary resource to the present bibliography. Other bibliographies also extend their coverage beyond the limits of the present bibliography.

GENERAL AND SPECIAL INTEREST SUBJECTS

2. GENERAL
General, historical, and "popular" works, including regional geography, non-fictional literature, and biographical material relating to the Grand Canyon or the lower Colorado River corridor between Glen Canyon Dam, Arizona, and the Colorado River delta in Mexico

This part includes all literature that broadly addresses the Grand Canyon-lower Colorado River region as well as specifically focused literature. It includes material written for a popular audience as well as scholarly publications that deal at least in part with the Grand Canyon or the lower Colorado River. Material that may otherwise be classified as "Miscellaneous" is also in this part of the bibliography. Travel literature that is more travelogue in presentation is included in this part, but travel publications that are incremental guides to attractions and informational guides to accommodations and services will be found in 9. Travel.

3. NEW YORK TIMES
Grand Canyon articles and reports in The New York Times from 1857

The New York Times is widely available on microfilm. Its comprehensive and authoritative editorial view of national affairs, as well as its traditionally well-respected reporting, make it a useful resource on national perspectives of events and issues in the Southwest. The longevity of this newspaper also allows it to serve as a Grand Canyon-Colorado River bibliography back to the time of the first expeditions to the canyon by Joseph C. Ives (1857-1858) and John Wesley Powell (1869).

For book reviews, see 30. Reviews.
4. MEMORIALS
Biographical memorials, necrologies, and obituary notices that refer to people of the Grand Canyon and lower Colorado River

To browse the memorials by name of the decedent instead of the author, see the separate file, Memorials (By Name of Decedent)

[NOTE: This is a textual file, not updated since January 2000.]

This part lists only obituary notices and commemorative or retrospective memorials. Such sketches are cited here only if the citationist refers to the Grand Canyon or the Colorado River. A few pertinent miscellaneous biographical sketches of persons prominent in the history of the area are also included. Traditional biographies as books and articles are listed in 2. General. The name of the decedent is added to the end of the citation, with his or her dates where known.

5. VISION-IMPAIRED
Works produced especially for vision-impaired people

This part includes items specifically prepared for the visually impaired. These citations are from the Library of Congress Information System; some publications are available only to those meeting holding-agency eligibility criteria. Dates given are for the printed volume from which the special product was prepared, unless listed otherwise.

See 27. Audio Only for conventional audio recordings.

6. YOUTH
Non-fiction and fiction for younger audiences that includes the Grand Canyon or the lower Colorado River

This part includes all those works traditionally referred to as "juvenile"; it includes works that also can be categorized as appropriate for the "young adult". Both non-fiction and fiction are grouped together in order to provide complete, contiguous coverage in this special literary genre. If the context of the title does not clearly indicate whether the item is fiction or non-fiction, a notation is appended to explain it.

7. FICTION
Fiction for adult audiences that includes the Grand Canyon or the lower Colorado River

This part lists only works of fiction, including folklore. However, special-interest subjects that can be considered by many to be works of fiction—such as those relating to UFOs and Creationist topics—are considered to belong either to "general" subjects or to the specific subject to which it purports to belong (e.g. Geology).

See 6. Youth for "juvenile" and "young adult" fiction.

8. VERSE
Poetry and verse about the Grand Canyon or the lower Colorado River

Publications that are both prose and verse are listed here as well as in Part 2. General.

9. TRAVEL
Informational guides to attractions and accommodations of hiking, camping, and land-, water-, and air-travel in the Grand Canyon region and the vicinity of the lower Colorado River (excluding Colorado River guides)
This part includes only those publications that provide route-finding information, seasonal data on accommodations, and time-limited information such as fees—specifically for lodging, restaurants, commercial recreational and educational opportunities, and scenic attractions.

See 2. General for essay-type guides that largely omit information on locations, fees, hours of operation, and other such time-limited information.

See 10. Colorado River Guides for travel guides to the Colorado River.

10. COLORADO RIVER GUIDES
Informational guides to travel on the Colorado River between Glen Canyon Dam, Arizona, and Mexico (excluding geological guides)

This part includes "strip maps" and other such specific guides for travelers.

LOWER COLORADO RIVER CORRIDOR SPECIAL INTEREST SUBJECTS

11. LOWER COLORADO—NATURAL HISTORY
Natural history and geography specifically about the lower Colorado River corridor below Grand Canyon — Lake Mead, Arizona–Nevada, to the Colorado River delta in Mexico

This part includes only those natural history and geography references that are restricted to the lower Colorado River corridor from Lake Mead to the delta. It includes hydrologic investigations of the river itself, as limited to this reach, including studies of that part of Lake Mead which has inundated the lower Grand Canyon. This part also lists natural history studies related to the Salton Sea.

12. LOWER COLORADO—PROJECTS
Engineering projects and water management issues in the Colorado River corridor below Grand Canyon — Lake Mead, Arizona–Nevada, to the Colorado River delta in Mexico — and proposed projects in the Grand Canyon

This part includes all references that deal with the dams and support facilities in the lower Colorado River, from Hoover Dam to the delta. Also included are documents related to irrigation and flood-control measures in the lower Colorado River; among them are project-specific documents and articles about the Colorado River breakout and the inundation of the Salton sink. As a means to accommodate the literature on proposed dams and diversion structures inside the Grand Canyon, documents relating to them are included in this part.
GRAND CANYON REGION HUMAN AFFAIRS SUBJECTS

13. ADMINISTRATION
Administration of Grand Canyon National Park and adjacent federal lands (including that part of Glen Canyon National Recreation Area between Glen Canyon Dam and Lees Ferry, Arizona)

This part comprises items broadly relating to the administration of the national park and earlier administratively sectioned lands. But it lists more than documents pertaining to bureaucratic procedures and regulations. Also included here are references that pertain to land use practices affecting the politically defined unit; some items relating to historic structures; management documents derived from environmental studies on public lands; public comments on, and responses to, proposed and implemented studies and management decisions; and general articles and published opinions that relate to legislative issues affecting the protection, operation, and public use of the lands of the political unit.

For less similarly related items, see also:
14. Human Affairs for sociological, recreational, and economic analyses of visitation profiles, visitor experiences, and social concerns of authorized concessions in the national park, and for similar analyses of the impact of legislatively mandated operational changes to the economic and power supply mandates of Glen Canyon Dam
15. Health and Safety for issues relating to human health and safety, including those that discuss and contribute to administrative decisions on management issues
18. Environment—Physical Ecology for ecological studies that discuss and contribute to administrative decisions on management issues
19. Environment—Biological for ecological studies relating to management of living organisms
20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents
21. Geology for physical and geological studies of environment that discuss or contribute to administrative decisions on management issues

14. HUMAN AFFAIRS
Sociological, recreational, educational, and economic issues, commentaries, and analyses relating to the Grand Canyon region

This part lists analytical studies and reports that relate to socio-economic concerns, including visitor appreciation and social "quality of wilderness" studies, and items pertaining to teaching and instruction about the Grand Canyon and Colorado River.

For related items, see also:
13. Administration for public-lands overview and management decision documents that relate to recreation and aesthetics
18. Environment—Physical Ecology for quantitative studies of environmental quality
20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents

15. HEALTH AND SAFETY
Issues relating to human health and safety in the Grand Canyon or on the Colorado River through Grand Canyon

This part lists items relating to human health and safety in the national park and immediate vicinity. It also includes documents on accident investigations.
For related items, see also:

3. New York Times for pertinent accounts published in New York Times (e.g., aircraft accidents)
13. Administration for aspects of safety issues that have resulted in discussion or management decisions relating to federally administered areas
17. Native Americans for material relating to Native American tribes and their relationship with the Grand Canyon after European contact
18. Environment—Physical Ecology for aspects of environmental monitoring of the physical environment
20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents

16. ARCHAEOLOGY
Archaeological history and research in the Grand Canyon region, including historical archaeology of nineteenth- and twentieth-century activities

This part includes items that relate to archaeological surveys of cultural artifacts and physical remains, from early human inhabitation of the Grand Canyon region to the remnants of recent historical (nineteenth- and twentieth-century) activities.

Also see 20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents

17. NATIVE AMERICANS
Native Americans of the Grand Canyon and issues relating to Native American activities in the canyon and in the national park

This part includes all documents that pertain to the Havasupai, who live within the physiographic Grand Canyon. Other Native American tribes are included in this part only with respect to their activities in the Grand Canyon, or with respect to their traditional or claimed heritage of the Grand Canyon.

See also:

2. General for publications of broader interest that relate at least in part to Native Americans and the Grand Canyon, including general travel items
16. Archaeology for publications relating to Native Americans prior to European contact, or to archaeological documentation of Native American heritage claims to the Grand Canyon
20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents
26. Audio-Visual for films and videos that relate at least in part to Native Americans and the Grand Canyon

GRAND CANYON REGION SCIENTIFIC SUBJECTS

18. ENVIRONMENT—PHYSICAL ECOLOGY
Physical, chemical, biophysical, and biochemical aspects of land, water, and atmospheric ecology, and historical aspects of environmental research, relating to the Grand Canyon region and the Colorado River corridor through the Grand Canyon

This part includes studies of biological ecology that are not organismically specific, and environmental studies that have been part of scientific investigations conducted for the purpose of management of public lands in the Grand
Canyon region. This part also includes general articles that pertain to environmental issues in the Grand Canyon region.

For items pertaining to natural history in the lower Colorado River corridor, below Lake Mead, see 11. Lower Colorado River—Natural History and 12. Lower Colorado River—Projects.

For related items, see also:

13. Administration for items on policy input, management documents drafted as the result of environmental studies, and public comments on these documents
14. Human Affairs for economic and sociological impacts of dam operations and river flows
15. Health and Safety for human health issues of environment in Grand Canyon and on the Colorado River
20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents
21. Geology for physical and geological environmental impacts
22. Hydrogeology for environmental impacts to the hydrogeological regime of the Colorado River

19. ENVIRONMENT—BIOLOGY
Organismal biology and biological investigations in the Grand Canyon region and the Colorado River corridor through the Grand Canyon

This part includes documents on biological censuses and the biology of animal, plant, and protist organisms as occurring in the Grand Canyon region. This part also includes biological reports and studies that have been part of scientific investigations conducted for the purpose of environmental management of public lands in the Grand Canyon region.

For items pertaining to natural history in the lower Colorado River corridor below Lake Mead, see:

11. Lower Colorado River—Natural History
12. Lower Colorado River—Projects

For related items, see also:

13. Administration for items on policy input and management documents drafted as the result of environmental studies and public comments on these documents
14. Human Affairs for economic and sociological impacts of dam operations and river flows
15. Health and Safety for human health issues of environment in Grand Canyon and on the Colorado River
20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents
21. Geology for physical and geological environmental impacts
22. Hydrogeology for environmental impacts to the hydrogeological regime of the Colorado River

20. GCES
Glen Canyon Environmental Studies technical reports and related documents produced under the monitoring and research programs of the Glen Canyon Dam Environmental Impact Statement as mandated by Congress
(compiled by Richard D. Quartaroli)

Browse file only. Due to the unconventional format of these informational citations, they are not part of the searchable database.

[NOTE: This is a textual file, not updated since January 2000. The citations, however, have since been modified and included in the online database.]
The Glen Canyon Environmental Studies (GCES) were created to perform as an interagency body under the direction of the U.S. Department of the Interior, Bureau of Reclamation. This was in response to a congressional mandate to develop an Environmental Impact Statement on the effects of hydropower production at Glen Canyon Dam on the Colorado River and on the river’s riparian community downstream through lower Glen Canyon and the Grand Canyon. The EIS also examined the potential impacts of management decisions on social and economic issues. The GCES went through two phases, and the EIS was completed in 1995. Also see 13. Administration for various management issues and decisions related to the GCES.

The GCES was such an important part of the scientific and cultural study of the Grand Canyon, specifically in the previously little-studied Colorado River corridor, that the products of these studies are a bibliography in their own right. Many of the documents are interdisciplinary, thus also a justification for listing them separately, rather than in several places throughout this bibliography. Historians of science will also notice in this list that some of the subjects were reported in other scientific publications. A few of the reports were also released in their entirety as U.S. Geological Survey Open-File Reports or publications of the National Academy Press; these are itemized here. Most of the reports listed here, and voluminous supporting data, are archived at the Grand Canyon Monitoring and Research Center, Flagstaff, Arizona. Complete information for this list is still being compiled.

Enumerated entries following the sequence for this bibliography do not necessarily pertain to individual reports; some refer to study groups, various reports of which are archived.

21. GEOLOGY

Physical and historical geology of the Grand Canyon region (including groundwater hydrogeology but excluding hydrogeology of the Colorado River and other surface waters)

This part includes works about the geology and paleontology of the Grand Canyon (excluding the hydrogeologic regime of the Colorado River), stratigraphic studies of Grand Canyon's rock units beyond the canyon proper, studies of the structure and tectonics of southwestern North America where embracing the Grand Canyon region, historical investigations of the Cenozoic evolution of the Grand Canyon and the lower Colorado River, and modern groundwater studies of the region.

Also see:

11. Lower Colorado—Natural History for geological works about the lower Colorado River region, Lake Mead, Arizona-Nevada, to the Colorado River delta in Mexico
20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents
22. Hydrogeology for materials relating to the hydrogeologic regime of the Colorado River through the Grand Canyon
29. Computer Media for specialized products released for use in this environment

22. HYDROGEOLOGY

Hydrogeology of the Colorado River and tributary surface waters in the Grand Canyon — including hydraulic investigations of the river, sedimentary studies in the river corridor, surface-water resources, and hydrogeological investigations relating to proposed engineering projects in the river corridor between Glen Canyon Dam and Lake Mead

This part encompasses all physical studies of the water flow (hydrology) of the Colorado River, applied research on its carried sediment, and the effects of the river's flow on the distribution of sediment on the banks of the river.
Also see:

13. Administration for items on policy input and management documents drafted as the result of environmental studies of the Colorado River

18. Environment—Physical Ecology for items relating to physical ecology as affected by the Colorado River through the Grand Canyon

19. Environment—Biology for items relating to biological ecology as affected by the Colorado River through the Grand Canyon

20. GCES for a consolidated listing of Glen Canyon Environmental Studies technical reports and related documents

21. Geology for items relating to groundwater hydrology and climatic studies with hydrological applications

23. GEOLOGICAL GUIDES

Geological field guides and road logs for the Grand Canyon and vicinity, and the Colorado River corridor between Glen Canyon Dam, Arizona, and Mexico

This part includes all publications that are intended to serve as geological field guides to routes and specific localities in the Grand Canyon and vicinity. Included among them are all geological guides to the Colorado River through the Grand Canyon.

See 10. Colorado River Guides for base maps and general guides to the Colorado River.

24. GEOLOGIC MAPS

Separately published geologic and special topographic maps of the Grand Canyon region

This list includes only separately published maps, and atlas sheets. For a more comprehensive index to all published geologic maps to 1992 that includes those that were published as figures within publications, see in:

IMAGE AND AUDIO

25. GENERAL MAPS

Separately published maps, charts, and atlas sheets that include the Grand Canyon or the lower Colorado River region (excluding geologic and special topographic maps)

There are hundreds of maps that could be listed here, but only those which have come to my attention are included. The catalogues of map dealers include many maps that cover the Southwest; unfortunately, their citations are incomplete and often the illustrations are too small to read pertinent author and publisher data from the map.

Also see entries listed in *Official map publications; a historical sketch, and a bibliographical handbook of current maps and mapping services in the United States, Canada, Latin America, France, Great Britain, Germany, and certain other countries*, by Walter Thiele, under the direction of A. F. Kuhlman (American Library Association, Chicago, 1938, 356 pp.); and *Vegetation maps of North America*, compiled by A. W. Küchler and Jack McCormick.
For Colorado River guides (strip maps), see 10. Colorado River Guides.

26. AUDIO-VISUAL
Audio-visual works — photographic sets, motion pictures, videotapes, and compact disks (CDs) relating to the Grand Canyon or the lower Colorado River

For certain tape speeds, ips = inches per second. Names of producing agencies are used for the indexed field. Playing times are given in minutes:seconds.

See also 5. Vision-Impaired for recordings produced specifically for the visually impaired.
See also 29. Computer Media for products designed for use on computers.

27. AUDIO ONLY
Audio works — audio tapes, analog recordings, and audio-only compact disks (CDs) relating to the Grand Canyon or the lower Colorado River, and orchestral and other musical scores

"Record" is an analog sound recording, or "phonodisc"; 78 rpm (revolutions per minute) format is on 10-inch plastic disks, 45 rpm format is on 7-inch plastic disks, and 33 1/3 rpm format is on 12-inch plastic disks. For tape speeds, ips = inches per second. Except for certain items especially identified to the artist or to the composer of musical works, names of producing agencies are used in the author field. Playing times are given in minutes:seconds.

See also 5. Vision-Impaired for recordings produced specifically for the visually impaired.
See also 27. Audio-Visual for audio-visual materials incorporating Grofé's "Grand Canyon Suite" in its entirety or in selected excerpts.
See also 29. Computer Media for products designed for use on computers.

28. MISCELLANEOUS IMAGERY
Miscellaneous artworks and photographs that are not illustrative material in works of general, historical, literary, or biographical interest, but appear by themselves with or without legend

This part includes only single, extraneous items; for example, a reproduction of a single painting, or folios containing prints only, without accompanying text other than the legend.

See 2. General for more complete and critical material on art and photography of the Grand Canyon-Colorado River region.

29. COMPUTER MEDIA
Computer media that include the Grand Canyon or the lower Colorado River

This part includes items that were released only in a computer-readable format, or in both hardcopy format accompanied by computer-readable versions or additional data in computerized format.

OTHER GUIDES

30. REVIEWS
Critical and brief reviews of books, articles, films, and products about the Grand Canyon or lower Colorado River

To browse the reviews by the title of the work being reviewed instead of the review's author, see the separate file, Reviews (By Title).

[NOTE: This is a textual file, not updated since January 2000.]

This part includes critical reviews at length in scholarly publications, as well as favorable promotional reviews in general-interest publications. Product reviews include software.

31. NEWSPAPER GUIDE
Brief guide to newspaper titles of the Grand Canyon region (and a supplemental list for Yuma, Arizona)

Browse file only. Due to the unconventional format of these informational citations, they are not part of the searchable database.

Newspapers are a valuable resource to the historian. Long-running papers of any town or city are important historical documents, but researchers who bask in the thrill of finding the obscure and unusual anecdote, small-town and out-of-print newspapers are a mine of information.

This list of newspapers is not exhaustive, nor is there any guarantee that all of them have had coverage of events or people of the immediate Grand Canyon or lower Colorado River regions. But within these regions it is likely that newspapers published there have had a higher frequency of canyon- and river-related items than the newspapers of more distant places. This list provides a sampling of newspapers of northern Arizona, southern Nevada, and southern Utah. A special supplement to the Arizona list includes newspapers of that crossroads of the far Southwest, Yuma.

32. MARGINALIA
Items not about the Grand Canyon but having a Grand Canyon venue or otherwise borrowing the name "Grand Canyon"

This part contains citations which are themselves not about the Grand Canyon but refer to the Grand Canyon as a venue; for example, meetings and conferences about subjects other than the canyon held at Grand Canyon. While they do not specifically contain information about the canyon, that they took place there makes them peripherally a part of the history of the canyon.

See 33. "Other" Grand Canyons for items relating to other geographical features that use the appellation "Grand Canyon".
33. "OTHER" GRAND CANYONS
Works that refer to other geographic features of the world and elsewhere that use the appellation "Grand Canyon" or make comparisons to the Grand Canyon, and works in which there are metaphorical references to the Grand Canyon

This part lists citations that pertain to other geographic features that include "Grand Canyon" as part of their names; for example, "Grand Canyon of the Yellowstone" or "The Little Grand Canyon". This part also contains: citations of articles that in some way compare the magnitude of other geographic features—on Earth and elsewhere—with the Grand Canyon; cite the Grand Canyon as the superlative chasm of the world; as well as more abstract comparisons, such as "the equatorial Grand Canyon", a concept of global economics. Exception is made here to this bibliography's exclusion of newspaper items; and further, to document the appearance of such items, this part includes such ephemera as advertising flyers, postcards, and some items that we have seen on the Internet, with the realization that the last category is especially ephemeral. For the Internet citations, the date is given for when seen by the compiler. Annotations provide quotations or the context in which the reference to the Grand Canyon appears. This documents all such references and comparisons to the Grand Canyon as have come to the attention of the compiler and contributors. For a published listing, now incomplete, of other known geographic features named "Grand Canyon" and "Colorado River", refer to the article by Corax and Abyssus (1996). The Geographic Names Information System managed by the U.S. Geological Survey is also a useful Internet resource at http://www-nmd.usgs.gov/www/gnis/index.html. The Defense Mapping Agency provides a similar resource for geographic names outside of the United States at http://164.214.2.53/gns/html/index.html.

34. MISCELLANEOUS MANUSCRIPTS
Manuscript materials originally cited in the bibliography or intended for inclusion in the Internet edition; subsequently removed but retained in this part for archival purposes

Earlier editions of this bibliography included some manuscript resources that should not have been cited. It is beyond the purview of this bibliography to list manuscripts and unique copies of reports. When such were originally added, it was believed that they were of sufficiently unique or special interest to warrant listing them; usually, a notation was appended to indicate the reference from which the citation was obtained; this was intended to be a means by which interested readers could refer back to the original citation to establish the context of the citation. These manuscript materials have been deleted from the formal parts of the bibliography, but they are retained in this part so as not to lose useful (even if not comprehensive) information that had been in previous editions. Citations which lack a cross-reference to Monograph 8 are items that were compiled for inclusion in the present edition. In one instance, a copy of an unpublished report appeared in a bookseller's annotated catalogue. For each citation, the part of this Internet edition of the bibliography for which it had been intended is indicated.
GENERAL AND SPECIAL-INTEREST SUBJECTS
The first explorations on the Colorado River took place from both downstream and upstream – Joseph C. Ives’ army expedition from the Colorado delta in 1857–1858 (above), and John Wesley Powell’s boating voyage from the Green River in 1869 (below). One of the most-quoted passages in Colorado River literature is that of the Powell party’s entry into the Upper Granite Gorge of the Grand Canyon (right). Almost none of the quotationists have, however, given a precise bibliographical credit or have shown the passage in facsimile.

(top left) An illustration of the Explorer on the Colorado. J. C. Ives, Report Upon the Exploration of the Colorado River of the West (Government Printing Office, Washington, 1861), front cover (detail), embossed cloth, gilt. (See the Preamble in the present work for the same view in the lithographed frontispiece to the volume.)

(top right) Detail from “Mojave Cañon”, Sketch by H. B. Mölhausen; lithograph by J. J. Young (Ives, Report, General Report Plate III).

(left) “Running a Rapid”, By W.L.S.; engraving by R. A. Muller (Powell, Exploration, Figure 28, facing p. 82) (detail).
GENERAL, HISTORICAL, BIOGRAPHICAL AND POPULAR PUBLICATIONS

General and popular works, including history, political geography, non-fictional literature, and biographical material, relating to the Grand Canyon or the lower Colorado River corridor between Glen Canyon Dam, Arizona, and the Colorado River delta in Mexico.

This section includes all literature that broadly addresses the Grand Canyon-lower Colorado River region as well as literature specifically focused on this region or a part of it. It includes material written for a popular audience as well as scholarly publications that deal at least in part with the Grand Canyon or the lower Colorado River. General environmental publications, as opposed to those that are more technical or administrative in nature, are included in this part of the bibliography. Material that may otherwise be arbitrarily classified as "Miscellaneous" is also in this part.

Memorials to deceased individuals will be found in PART 4. MEMORIALS.

Travel literature that is more travelogue in presentation is included in this part, but travel publications that are incremental guides to attractions and informational guides to accommodations and services will be found in PART 9. TRAVEL GUIDES.

Colorado has just been dispatched, under command of Lieutenant Ives. The country traversed by this river is reported to possess great agricultural and mineral wealth.” (entire note)]

1858 2.16349 Bursting of Lieut. Ives’ expedition. Deseret News, (June 9):3 [issue pagination]. (From an undated clipping from the San Diego Herald.) [The Ives’ expedition supposedly in the steamer Jessup, turned back by hostile Indians; and note of the “iron steamer” sunk in the river. Also the sinking of the Jessup above Yuma.]

1859 2.16296 [Note.] In: Monthly Record of Current Events [section]. Hutchings’ California Magazine, 3(10)(April):479. ["The steamer ‘Uncle Sam’ returned to San Francisco, from her trip to the mouth of the Colorado with U. S. troops, animals and stores, on the 17th ult." (entire item)]

1859 2.14834 The far West. From the Colorado River to Utah. The Friend (Philadelphia), 32(45)("Seventh-day, Seventh month 16, 1859" [Saturday, July 16]):357. [Written in the first person but without by-line, "For 'The Friend.'” Seems to be an excerpt from Joseph C. Ives’ (1858) report on the exploration of the Colorado River.]

1859 2.16696 Balduin Möllhausen’s Reise vom Mississippi nach der Südsee. Ergänzungs-Conversationslexikon (Leipzig und Meißen), 14 (new series, 7):450-460. (Ergänzungs-Conversationslexikon der neuesten Zeit auf das Jahr 1858/59.)

1862 2.3589 Colorado River of the West. *American Journal of Science and Arts*, Series 2, 33:387-403. [Abridged from Ives (1861) and Newberry (1861), both chapters in Ives (1861) overall volume.]

1862 2.13722 Colorado River of the West. *The Friend* (Philadelphia), 35(41)(Seventh-day, Sixth month 14 [Saturday, June 14]):326-327; 36(42)(Seventh-day, Sixth month 21 [Saturday, June 21]):330-331; 36(43)(Seventh-day, Sixth month 28 [Saturday, June 28]):339-340. ("From "Silliman’s Journal" [*American Journal of Science and Arts*].) [Abridged from Ives (1861) and Newberry (1861).]

1863 2.14749 *Rudo ensayo, tentativa de una prevencional descripcion geographica de la Provincia de Sonora, sus terminos y confines; 6 mejor, coleccion de materiales para hacerla quien lo supiere mejor. Compilada asi de noticias adquiridas por el colector en sus viajes por casi toda ella, como subministradas por los padres missioneros y practicos de la tierra. Dirigida al remedia de ella, por un amigo del bien comun.* San Augustín de la Florida: [No imprint] ("Munsell, Printer, Albany."). 208 pp. [Wrapper title: *Provincia de Sonora.*] [See particularly Capítulo 1, “Descripcion de la Provincia”, pp. 1-7, and Capítulo 2, Seccion 4, “El Rio Colorado”, pp. 23-26.] [Privately printed in 160 copies by Buckingham Smith, from a copy of an original manuscript in the archives of Mexico dated 1763 that was written by an anonymous Jesuit padre then in Sonora. In 1894 a translation in English by Eusebio Guítéras, prepared from the Smith printing, was published in the *Records of the American Catholic Historical Society*, 5:109-264 (see item no. 2.14750).]

1864 2.20 Quick time to Arizona. *Mining and Scientific Press*, 9(August 20):120. [Colorado River.]  [Lower Colorado River.]

1865 2.14956 News from Home [section]. *The Latter-Day Saints’ Millennial Star* (Liverpool), 28(7)(February 17):107-108. [See p. 108: "Mr. Jennings received the first contribution of merchandize [sic] from California, via the Colorado, on the 5th of January. It has been a long time on the way, but nevertheless it establishes the fact that merchandise can be brought up the Colorado to Callville, as a portion of this train was landed there." (entire note)]

1865 2.14953 News from Home [section]. *The Latter-Day Saints’ Millennial Star* (Liverpool), 27(20)(May 20):316. [Principally about commerce on the lower Colorado River.]

1865 2.14954 News from Home [section]. *The Latter-Day Saints’ Millennial Star* (Liverpool), 27(23)(June 10):365-366. [Includes comments about commerce on the lower Colorado River.]

1866 2.14800 Nevada boundary extension. *American Mining Gazette and Geological Magazine*, 3(11)(November):522. [Regarding the Congressional act to enlarge the State of Nevada. "The ceded territory [by California] on the . . . south [would include] Pahranagat, Calville, and El Dorado Canon, places that may become populous and important."]

1866 2.14799 Internal improvements—Wanted a good wagon road to Colorado. *American Mining Gazette and Geological Magazine*, 3(12)(December):575-576. [Regarding calls for "a wagon road direct to Salt Lake, with a branch stretching to the head of navigation on the Colorado River."]

1867 2.13418 Navigation of the Colorado. *The Friend* (Philadelphia), 40(40)("Seventh-Day, Sixth Month 1" [Saturday, June 1]):316. [From *Scientific American*.]

1868 2.14754 [Record of meeting of February 17, 1868.] *Academy of Science of St. Louis, Transactions*, 2:584. ["Dr. Engelmann read a paper, communicated from Arizona, by Dr. C. D. Parry, being ‘An Account of the Passage through the Great Cañon of the Colorado River, by Mr. James White, with Geological Remarks,” which was referred to the Committee on Publication." (entire item)]

1869 2.14351 Voyage through the Grand Canon of Colorado [sic]. *In: Reviews* [section]. *American Naturalist*, 2(12)(February):655-656. [James White affair; an abstract of the item by C. C. Parry (1868) (see Item no. 2.5001).]

Competition of the Pacific Railway. *The Latter-day Saints’ Millennial Star* (Liverpool), 31(May 29):358-359. [From *Liverpool Mercury*, in turn apparently from the *New York Tribune*. Passing reference in an imaginary context to train service to “Big Canyon of the Colorada” [sic], which passage seems to have come from Albert D. Richardson’s *Beyond the Mississippi* (1869, p. 611).]

[Plans for Callville ferry and lower Colorado River region explorations.] In: *Utah News* [section]. *The Latter-day Saints’ Millennial Star* (Liverpool), 31(September 4):584. [From the *Deseret News*. “A number of White Piners had organized an expedition, to start from Treasure City, and pass Pahranagat Lake and the Muddy settlements to Callville, establish a ferry there, then run down the river 35 miles to El Dorado canyon, and establish a town, whence explorations might radiate in the adjoining country.” (entire item)]

Carvalho’s painting of the Grand Canyon of the Colorado River. *Scientific American*, new series, 21(12)(September 18):180-181. [S. N. Carvalho painting of Grand Canyon exhibited at his studio in New York; from sketches taken “on the spot [at the head of Diamond Creek] and while attached to the Fremont expedition as photographic artist.” The painting is briefly described.]

[John Wesley Powell.] *The Cultivator and Country Gentleman*, 34(September 30):262. [“Col. [sic] Powell, the Colorado explorer, has returned from a journey through the entire Grand Canon, from Green River to the point where the Colorado debouches into the open plain in Arizona. The country is barren beyond description, unsuceptible of cultivation even by irrigation, and no discoveries of precious metals were made.” (entire note)]

1870 2.14755 A drift for life. *Littell’s Living Age*, series 4, 16(February 12)(1341):424-427. (“From All the Year Round.”) [James White.]

1872 2.16145 [Letter.] *Brotherhood of Locomotive Engineers’ Monthly Journal*, 6(7)(July):300-302. [Signer’s name seemingly left out when printed; letter signed, “D. Troop. 5th Cavalry.” Letter written in the first person from Camp Bowie, Arizona, May 1, 1872; includes references to Yuma and lower Colorado River.]

1873 2.16961 [Note.] In: Geographical Notes [section]. *American Educational Monthly*, 10(June):265. ["Lieut. Wheeler has ascertained that a railroad can cross the Colorado River near the foot of the Grand Cañon in Arizona." (entire item)]

1873 2.16125 The Arizona military telegraph line. *The Telegrapher*, 9(369)(August 9):195. [Notes a reconnaissance planned for the line between Maricopa Wells and Yuma.] [As part of a series of notices in this serial, see also under "Clix" (pseudonym).]

1873 2.16126 The Arizona telegraph. *The Telegrapher*, 9(372)(August 30):215. [From the *San Diego Union*. Notes in part, "The wire for the San Diego and Yuma section will arrive at this port per steamer Mohongo on Saturday next, and the poles in a few days later, when the work of construction is expected to commence immediately."]

1874 2.16373 Pioche to San Juan. *Deseret News*, (February 25):14 [issue pagination]. (From *Pioche Record.*) [Includes mileages for segments between St. George to Mancot, via Lees Ferry. Written in the first person but here unsigned.]

1874 2.16377 Arizona. Its mineral, agricultural, grazing and other resources; with unvarnished facts concerning its climate, geography, general healthfulness, inducements to emigrants,
&c., &c. Deseret News, (May 13):14 [issue pagination]. (From Arizona Miner, April 17.)

1874 2.16378 Mineral resources of Arizona. Deseret News, (May 13):14 [issue pagination]. (From Chicago Inter-Ocean; with addendum from Arizona Miner.) [Principally about other subjects.]

1875 2.16786 Glories of southern Utah. The Aldine, 8(1)(January):34-35. [Illustrations by Thomas Moran. Text notes Grand Canyon, in passing.]

1875 2.16380 A long mule ride back. Deseret News, (March 10):2 [issue pagination]. [George Harris of Locke, New York, has ridden a mule from Pueblo, Colorado, to Mexico, to the lower Colorado River, San Diego, and back to the Colorado and north to Salt Lake City. Item signed, "Ex."]

1875 2.16381 The Utah Southern. Deseret News, (December 29):7 [issue pagination]. (From Los Angeles Express.) [Proposed connection of Utah Southern Railroad to the Los Angeles and Independence Railway via Callville.]

1875 2.38 Camp La Paz, Arizona Territory. U.S. War Department Circular 8.

1877 2.14586 E. Hoelzel’s Typical Landscapes. From: Educational Publications [section], Object Teaching [subsection]. In: Kraus-Boelte, Maria, and Kraus, John, The kindergarten guide. An illustrated hand-book, designed for the self-instruction of kindergartners, mothers, and nurses. First volume: The gifts. New York: E. Steiger and Co., and London: A. N. Myers and Co., [last advertising page]. [N.B.: Hoelzel’s landscapes are frequently advertised in the late 19th century; the “typical landscapes” set includes a view of the Grand Canyon. This advertisement illustrates the view, which has otherwise not been seen by the compiler.]

1878 2.16330 Explorations and surveys. Scientific American, new series, 39(2)(July 13):24. [“Major Powell’s surveys during the coming summer will be more exclusively confined to the limits of Northern Arizona and Southern Utah. The new region lies mostly south of the Grand Cañon of the Colorado river and includes the plateau country on which are situated the famous Moqui towns.” (entire note)]

1879 2.42 Ehrenberg, Arizona. Mining and Scientific Press, 39(October 18):249. GOODMAN 839

1880 2.45 The deepest canyons in the world; a man loses his life exploring. Arizona Miner (Prescott newspaper), 7(70)(April 7). [cited=GCNHA Monograph 8: page 1-7]

1880 2.49 The railroad bridge at Yuma. Mining and Scientific Press, 40(May 1):273. GOODMAN 1095

1894 2.14355 *The national cyclopædia of American biography; being the history of the United States as illustrated in the lives of the founders, builders, and defenders of the Republic, and of the men and women who are doing the work and moulding the thought of the present time*. Volume V. New York: James T. White and Co., 537 pp. [See “Sutro, Mrs. Theodore”, pp. 461-462; New York social circle. “Mrs. Sutro happens to be one of the few American women who have traveled extensively in their own country; in one of her recent trips with her husband she penetrated to the Grand Cañon of the Colorado, that stupendous scenic wonder of the United States, which, up to 1893, but few ladies had visited.” (entire pertinent note)]

1894 2.14750 Rudo ensayo (Eusebio Gúiteras, translator). *American Catholic Historical Society, Records*, 5:109-264. [See particularly Chapter 1, “Description of the Province of Sonora” (pp. 114-118), and Chapter 2, Section 4, “The Colorado River” (pp. 130-132).] [A translation from Spanish to English of the document privately printed in 1864 by Buckingham Smith (see item no. 2.14749), which was printed from a copy of an original manuscript in the archives of Mexico dated 1763 that was written by an anonymous Jesuit padre then in Sonora. The translated title (from p. 110): “Sonora. A rough essay, or rather an attempt at a geographical description of the Province of Sonora, its boundaries and extent; or rather, a collection of materials for the use of some one who can compile it better. Written from information obtained by the author in his travels through the country, or supplied by the missionary fathers and persons well acquainted with it. Meant for its benefit by a friend of the common good.” The English translation is prefaced by a brief description by Lawrence F. Flick (p. 109). In this issue of the *Records* also is a “Brief Sketch of the Life of Eusebio Gúiteras” by his niece, Laura Gúiteras (pp. 107-108), with a photographic portrait of Eusebio Gúiteras.]

1895 2.14441 [Marcus E. Jones.] In: De Alumnis [section]. *The Unit* (Iowa College), 10(4)(February 23):39. [“A letter from Marcus E. Jones [class of 1875] informs us that he will be in Washington until May and that his book on the botany of the Grand Canyon district will be out soon thereafter.” (entire note) N.B.: No monograph on the subject by the author is identified.]

1895 2.14991 Re-arranging the West. *The Deseret Weekly*, 50(16)(April 6):505-506. ("Written for this Paper"). [Proposition for the re-arrangement of state lines. Proposed boundaries separating Utah, New Mexico, Arizona, and "south California" follows the Colorado River.]
New railway scheme. *Deseret News*, (May 4):5. [Proposed New York-based venture "for building an enormous reservoir and canal in Arizona, and extending a railroad there"—Salt River reservoir and irrigation canals east of Colorado River; extention of Arizona Central railroad northward to Salt Lake City and southward to Nogales.]

Utah news. (Summarized from Territorial papers.) *The Latter-day Saints’ Millennial Star* (Liverpool), 57(32)(August 8):510-512. [See p. 511, item relating to "Officials of the University of Utah" under President Talmage studying geology of the Grand Canyon region, then underway.]

Linde Association. Sketch of the organization of the Linde Association of Stationary Engineers—its aim and purpose—biographical sketches of its officers. *Ice and Refrigeration*, 9(4)(October):238-240. [See regarding Otto Luhr, p. 239: "Then he joined a party of bridge builders going west, and assisted in the erection of the bridge across the Canyon Diablo, in Arizona, on the A. & P. road [Atlantic & Pacific Railroad], 355 feet above the bottom of the canyon. He was one of two men only who did the riveting at the highest and most dangerous points about the bridge. After this he assisted in erected another bridge across the Grand canyon of the Colorado." (entire note; with portrait)]

*A description of the work of the Manchester Art Museum, Ancoats Hall, Great Ancoats Street. Summary and index*. Manchester, England: H. Rawson and Co., 58 [60] pp. [See pp. 21-22; notice of "large oleographs of places which show clearly the results of the action of great forces of nature (Geographische Characterbilder), published by Hoelzel of Vienna", which includes one of Grand Canyon (not illustrated here, but see Anonymous (1877), item no. 2.14586).]

1896 2.13475 [Voice heard at great distance.] To-Day (London), 12(August 29)(147):119. ["In the great Canyon of the Colorado a man's voice was plainly heard at the end of the Canyon, eighteen miles distant." (entire note)]

1896 2.85 Translations of the Relacion de Suceso. Account of what Happened on the Journey which Francisco Vazques made to Discover Cibola. In: Winship, George P., The Coronado expedition, 1540-1542. U.S. Bureau of Ethnology, 14th Annual Report, Part 1, pp. 572-579. [This text gives the account of the non-native discovery of the Grand Canyon by Cardeñas. Winship's footnote, p. 572, states: "The Spanish text of this document is printed in Buckingham Smith's Florida, p. 147, from a copy made by Muñoz, and also in Pacheco y Cardenas, Documentos de Indias, vol. xiv, p. 318, from a copy found in the Archives of the Indies at Seville. * * * No date is given in the document, but there can be no doubt that it refers to Coronado's expedition. In the heading to the document in the Pacheco y Cardenas Coleccion, the date is given as 1531, and it is placed under that year in the chronologic index of the Coleccion. This translation . . . has already been printed in American History Leaflet, No. 13."] [cited=GCNHA Monograph 2: page 14] [cited=GCNHA Monograph 8: page 1-7]

1903 2.16434 R.G.W. to extend to Swamp Point. Surveys made from Marysvale through to the Colorado River for the road. Taps fine mining country. Eastern syndicate has obtained possession of tract of country around the district to be developed. Deseret
News, (November 10):5 [issue pagination]. [Denver & Rio Grande Railroad plans include “a big hotel and laying out the great park” on Grand Canyon North Rim.]

1903 2.16435 High standard of Utah art. Deseret News, (December 19):63 [issue pagination]. [Includes illustration of “Grand Canyon of the Colorado. Harry Culmer’s $300 Prize Picture Which is Now the Property of the State.”]

1903 2.13296 [Record of meeting of May 18, 1903.] Academy of Science of St. Louis, Transactions, 13:xxxix. [Includes notice of a lecture illustrated by lantern slides, by C. Barck, describing Grand Canyon’s “first deliberate crossing” by “Mr. James” [presumably George Wharton James] and Barck, Bass Camp to Point Sublime.]

1904 2.14101 Nu Chapter. In: Personal and Alumni Notes [section]. The Frater (Psi Omega Fraternity), 3(2)(January):106-107. [F. C. Friesell trip through Arizona, including plan for float trip on [lower] Colorado River and visit to Grand Canyon, “which the Editor’s brother has explored and traversed by boat.” Managing Editor of The Frater is H. E. Friesell. Although it is not clear in context as to whether the “Editor’s brother” refers to F. C. Friesell in the third person, or to a third brother, it refers to Frederick Charles Friesell, as confirmed in a subsequent report, (3)(March):161.]

1904 2.14829 The Spectator. Outlook, 76(7)(February 13):399-400. [Column by “Spectator”. See p. 399, item mentioning travellers’ expectations, “he expects what he finds”; with an example, “Even the Grand Cañon of the Colorado came to be a convenient receptacle for rubbish to the Chinese cook employed in the hotel upon its brink, and the Spectator has seen him slide potato-parings into that stupendous chasm without visible emotion.” (entire item)]

1904 2.16436 Gold and Indians lost. Deseret News, (January 28):7 [issue pagination]. [“A special to the Express, from Beals, Cal., says: ¶Six Indians and about $1,200 in gold were lost by the upsetting of a boat on the Colorado river, near the Indian reservation a few days ago. James Cundiff and Frederick Longmeyer, prospectors, witnessed the accident and managed to save one of the occupants of the boat.” (entire item)]

than 3000 Methodists enroute to General Conference in Los Angeles, first stranded for more than a day on the Grand Canyon line due to overexerted engines and failure of the road bed, and the overcrowding of facilities at Grand Canyon.

1904 2.14922 [Anecdote.] In: Along the Horizon [section]. The Advance (Chicago), 43(July 21)(2019):67. ["An English visitor says that in the Grand Canyon we have national glories without a parallel. This English visitor is without a parallel." (entire item)]

1904 2.16437 A big saloon robbery. Deseret News, (August 17):7 [issue pagination]. [Cubbage’s saloon, Needles, California. “It is believed the robbers escaped down the Colorado river in a boat.”]

1904 2.13702 From an Oxford Note-Book [column]. The Observatory (London), 27(November)(350):417-422. [Written in the first-person, but authorship not discerned. See pp. 420-421.]

1904 2.14925 The Brigham lecture. The Miami Student (Miami University, Ohio), 24(3)(December):94. [Review of lecture by Nat M. Brigham on “Grand Canyon of the Colorado”. Also notes forthcoming lectures in Cincinnati and at the White House in Washington, D.C., “at the special invitation of President Roosevelt, his old classmate [at Harvard University], to lecture before a select company.”]

1904 2.15341 California fragments. Lutheran Observer, 72(49)(December 2):17 [also paginated 1553]. [Includes note: "Pastor Oehler, of the German church, Sacramento, recently delivered his two new lectures, ’The wonders of the Grand Cañon’ and ’The Rhine and its Beautiful Lengends,’ [sic] to large audiences in the Congregational church of that city. The daily papers spoke in terms of the highest praise of the lectures, both of which are the result of Rev. Oehler’s own investigations and labors, even to the making and coloring of the slides." (entire note of pertinence)]

1905 2.12894 New Grand Canyon hotel, El Tovar. The Dial, 38(January 1):27. [Likely an advertisement by Fred Harvey Co. written as an article.]

1905 2.16057 Academy session. In: Transactions for December, 1904. Southern California Academy of Sciences, Bulletin, 4(1)(January):2. ["The Secretary, Mr. R. Baumgardt, delivered a lecture on 'The Grand Canon of the Colorado,' illustrated by
the lantern, with slides from photographs taken largely by himself and Mrs. Baumgardt, and colored by the latter." Followed by a one-paragraph synopsis signed, "Editor" (name not indicated in issue).]

1905 2.16047 Santa Fe Route. In: *Pamphlets, Reports, etc.* [section]. *Railway Age*, 40(1)(July 7):32. ["Access to the Grand Canyon was made easy by the building of a branch of the Santa Fe from Williams, and now the comfort of visitors has been assured by the construction of a $250,000 hotel, 'El Tovar,' the attractions of which are described in a handsome pamphlet, with illustrations. It was rather a bold enterprise for the railroad company to invest such an amount of money in a modern hotel on the confines of civilization, but the stupendous attractions provided by nature at this spot are likely to make the venture remunerative." (entire item)]

1905 2.16192 [Telephone system in Mojave desert.] In: *Current Electrical News* [section]. *Electrical Review*, 47(3)(July 15):111. ["San Bernardino, Cal.—Plans are being made to install a telephone system in the Mojave desert. The route includes a line from Needles to San Bernardino, also down the west side of the Colorado river to the Santa Fe bridge, and thence to Parker. Another line will extend from Ibex, a station on the Santa Fe, to Searchlight, nev., and still another will reach from Barstow to Johannesburg and Kramer. Other lines under contemplation will take in all the towns along the Salt lake as far as Las Vegas, from which place a wire will be built to Bullfrog and thence to Tenopah." (entire item)]

1905 2.16441 A game preserve in Grand Canyon. Proposition to establish one on its rim now under official consideration. Roosevelt has been invited. Expects to take a lion hunting trip on it that will entire eclipse Colorado exploits. Utah man gives particulars. President Woolley came to Salt Lake today to order material for aerial tramway. *Deseret News*, (August 14):1-2 [issue pagination].

1905 2.16443 To the Grand Canyon. Senator Smoot and party will leave on Friday to explore it. *Deseret News*, (September 12):1 [issue pagination]. [Reed Smoot.]

1905 2.16444 Off tomorrow. Congressman Howell comes down to join Grand Canyon expedition. *Deseret News*, (September 14):2. [Congressman Joseph Howell (Republican).]

1905 2.16048 San Pedro Los Angeles & Salt Lake. *Railway Age*, 40(11)(September 15):335. ["Surveys have been made for a branch from Las Vegas, Nev., to the Grand Canyon of the Colorado River, 26 miles, and it is stated that the work of construction will begin at once." (entire item)]

1905 2.14476 The Grand Cañon air line. In: With the Procession [section]. *Everybody's Magazine*, 13(4)(October):564-565. [Grand Cañon Transportation Co., of Utah, newly incorporated; "to stretch a wire cable across the Grand Cañon, anchor it on the opposite side of the gorge, and run a car back and forth, eight thousand feet in the air." (p. 564)]

[Monorail over Grand Canyon proposed to allow visitors greater access. (Actually pertains to proposed cable car between Colorado River and Kaibab Plateau.)]

1905 2.15249 [William Allen White.] In: University of Kansas, Graduate Magazine, 4(3)(December):114. ["For McClure's Magazine he wrote a description of the Grand Canon of the Colorado. The article was illustrated by page plates in color." (entire note of pertinence)]

1905 2.14426 Conférences sur les États-Unis. In: Le Globe (Société de Géographie de Genève), 44:158-159. [Announcement of lecture series by Arthur de Clicarède under the society's patronage for the benefit of the blind, including "Le grand cañon du Colorado, the greatest thing in the world (Territoire d'Arizona)."]

1906 2.16502 Energy from Colorado River. In: The Search-Light, 27 (new series, 3)(10)(March 10):160. ["The energy of the Colorado River is to be transmitted to Los Angeles, according to plans now being matured by local and Philadelphia capitalists. First, the power is to be distributed among the mining camps on the Nevada and Arizona border, and ultimately it will be transmitted to Los Angeles City. It is claimed that between the Grand Cañon of the Colorado and the Black Cañon it is possible to take advantage of certain sites and develop 500,000 horsepower." (entire item)]

1906 2.16452 Grand Canyon branch. R. C. Kerens confirms story that Clark will build one. Deseret News, (March 14):2 [issue pagination]. [Plans for rail line from Moapa along Moapa River [Muddy River] to "Grand Canyon" and tourist development there to compete with the Santa Fe; also a crossing of the Virgin River at Rioville and continuing to Chloride to connect with the Arizona & Utah line. (See also Item no. 11.2628.)]

1906 2.16453 From the Salton Sea. Deseret News, (March 15):1 [issue pagination]. ["Calexico, Cal., March 13—Wharton James and Louis Francis Brown have reached here with three boats and Indian guides en route from Yuma to the Salton sea, by way of the Colorado river and overflow through the wilderness. ¶They are the first white men to make the trip." (entire item) (George Wharton James.)]

1906 2.16971 [Thomas Moran.] The International Studio, 28(April(?)):xvi-xvii. [Moran's Chasm of the Colorado, noted in passing.]
1906 2.17000 Goes on expedition. *The Tech* (Boston) [Massachusetts Institute of Technology], 25(84)(May 14):1, 5. [Geology Department professor D. W. Johnson expedition to Rocky Mountain region, incuding Grand Canyon; with H. W. Shimer and C. H. Decker. Various misstatements and typographical errors. Expedition leaving Prescott for San Francisco Peaks and "Grand Canon of Colorado, then go south to the Utah line, cross the Colorado River, turn west and south over the Kaibal Plateau, reaching the Grand Canon a second time at Point Sublime. From there the expedition will go to southern Utah . . . after which it will investigate the ancient volcanoes and lava cataracts of the Ninkaret Mountains, reaching the Grand Canon a third time at the mouth of the Toroweap valley", then "northward along the great Hurricane fault to Toquerville in southwestern Utah . . . ."]

1906 2.16454 Kanab [news]. Roadway to Grand Canyon. Now under construction. *Deseret News*, (June 30):13 [issue pagination]. ["President E. D. Woolley left Kanab last night with a gang of laborers to make a trail into the Grand canyon. Work on the trail and the tramway across the canyon will now be pushed to completion. It is expected the game preserve created by Congress on the Buckskin mountain will attract swarms of tourists." (entire note)]

1906 2.16456 Kanab [news]. Grand Canyon visitors. *Deseret News*, (July 23):3 [issue pagination]. ["A party of young people left here to visit the Grand Canyon this afternoon. Parley Day of Fillmore, John Christensen of American fork and B. Y. Woolley, of Kanab made up the party. This is the second of the parties to visit the canyon on this side this summer. There are four or five more parties planned here to visit the canyon in the near future." (entire note)]

1906 2.16830 The recent work of Albert L. Groll. *Brush and Pencil*, 18(2)(August):frontispiece, 43-51, 53-54. [See frontispiece, "Arizona", and p. 43: "It is only a stretch of desert and sky and low-lying hills, but it glows like a gem with the indescribable, never-to-be-fogotten color of the Colorado Desert." (entire note)]

1906 2.12913 [Buffalo Jones and Grand Canyon.] *The Philistine* (East Aurora, New York), 23(5)(October):140-146.

1907 2.16461 What St. George is, has and wants. T. P. Cottam, representative from the south, discusses these subjects. Awaits railroad advent. Has copper, silver, fine farms and sunshine—Needs good roads, bridges and Arizona Strip. Deseret News, (February 8):10 [issue pagination].

1907 2.13772 [Voice heard at great distance.] From: “From Punch” [subsection]. In: Highways and Byways [section]. The Chautauquan, 46(3)(May):270. [“Eighteen miles is the longest distance at which a man’s voice has been heard. This occurred at the Grand Cañon of the Colorado, where a man shouting ‘Bob’ at one end was plainly heard at the other, eighteen miles away.’ —Cassell’s Saturday Journal. This works out at a mile and a half for a penny, so it isn’t so wonderful after all.” (entire note) presumably referring to British postal rates.]

1907 2.12965 Two women in the desert. Good Housekeeping, 44(6)(June)(344):673-675. [“Two of our Good Housekeeping women ventured through the Painted Desert, a summer or two ago, to the Grand Canyon of the Colorado without male escort.” One woman is identified as “Mrs Carlson” of Connecticut.]

1907 2.16463 Kanab [news]. Deseret News, (July 4):7 [issue pagination]. [“A very interesting conference of the Relief societies of this stake has just closed. Mesdames Dusenberry and King were in attendance. Today they are starting to the Grand canyon, accompanied by President E. D. Woolley and others, who go to complete the tramway across the Colorado river.” (entire note)]

1907 2.14862 From the Utah Fraternity. Denver Medical Times, 27(2)(August):58. [Camping parties in association with first summer meeting of the third Councilor District Medical Society of Utah, including one to Grand Canyon, “across the Buckskin mountains in pioneer style . . . for 25 days”.

1907 2.16464 A novel railroad. One from brink to bottom of Grand Canyon of Colorado to be built. Deseret News, (August 8):1 [issue pagination]. [“Santa Fe [Railway] officials have arranged with Ohio people to build a novel railroad from the brink to the bottom of the Grand canyon of the Colorado river. The grade will be so steep it almost can be
called[,] it is said, a perpendicular railroad. It is to be about three miles long and will cost fully $100,000 a mile. It will be a cog railroad, with a rack rail, which will form a continuous double ladder, into which the toothed wheels of the locomotive will work.” (entire item)] [Cog railway.]

1907 2.16995 The locomotives of the Atchison, Topeka and Santa Fe Railway. The Engineer (Chicago), (September 13):253-256. [See pp. 253-254, notes on the Arizona division from Seligman, Arizona, to Bakenfield [sic Bakersfield], California.]

1907 2.14696 Developing opportunities in the South and Southwest. In: Wilderness to Wealth [section]. Opportunities of To-day, 3(6)(October):15. [Notes briefly Santa Fe Railway development and promotion at Grand Canyon.]

1907 2.16275 Railroad into canyon. Popular Mechanics, 9(10)(October):1102. ["The Grand canyon (sic) of the Colorado is a mile deep, and down its wall-like side a rock railway will be built. It will probably be the steepest railroad in the world and will save passengers an all-day and dangerous trip on horseback. Its construction will be along lines of other rock roads already in operation.” (entire item)]

1907 2.13805 [Lecture.] In: Geographical Record [section]. American Geographical Society, Bulletin, 39(1):42. ["... the speaker of the evening, Mr. Howard W. Du Bois, who addressed the Society on the Grand Cañon of the Colorado. Stereopticon views were shown.” (entire note)]

1907 2.13469 Record of the Class of 1892; Secretary’s report no. IV. For the fifteenth anniversary. Cambridge, Massachusetts: The University Press, for the use of the class, 282 pp. [See p. 131, Nathaniel Saltonstall Howe Sanders; and p. 213, Charles Gershom Van Brunt.]

1908 2.16466 To harness the Colorado. Deseret News, (January 9):3 [issue pagination]. [Power-production dam at Lees Ferry proposed. Includes note, “It is the reported intention of the eastern syndicate of capitalists to build an electric railroad from Bright Angel trail to either the Clark road at Lund or the D. & R. G. at Marysvale.”; i.e., Old Bright Angel Trail, North Rim.]

1908  2.16467  New road taps rich territory.  Extension of Clark road now planned as formerly announced.  Engineers receive orders.  As soon as weather permits surveyors will take the field to run preliminary lines.  *Deseret News*, (April 15):5 [issue pagination].  [Extension of Salt Lake Route into northwestern Arizona.]

1908  2.16769  [Note.]  *In: Where the Artists are Summering* [section].  *American Art News*, 7(31)(June 13):.  [“Thomas Moran is painting at the Grand Canon, Arizona.”  (entire item)]

1908  2.14707  At the El Tovar.  *Santa Fe Employees’ Magazine*, 2(9)(August):714-715.  [Hotel’s physical plant and fire department, including two Kolb Bros. photos.]

1908  2.16468  Discovery of deepest canyon in the world.  Yentna Gorge found by Dr. F. A. Cook in American Alaska, is one thousand feet deeper than famous Grand Canyon and much more impressive.  *Deseret News*, (August 8):23 [issue pagination].  [Also includes note: “Until six years ago, the tourist could gain the rim of the Grand canyon of the Colorado only by taking a 90-mile stage ride through the San Francisco mountains and the Painted desert.  Now the railroad runs to the canyon, there are several hotels on the south rim, and the tourist looks into the red depths of the Colorado with all the comfort and luxury of seeing the desert from a Pullman.”  Additional notes on Grand Canyon in places.]

1908  2.13391  Officers’ paper.  The province of the home in child culture.  *In:* Officers’ Department [section].  *The Children’s Friend*, 7(9)(September):361-363.  [Begins with a parable of “an old man who was a luminous character” who was “[l]iving on the brink of the Grand Canyon of Arizona”.

1908  2.16469  Two attractive pictures.  Harry Shipler’s panorama and his Grand Canyon scene admired.  *Deseret News*, (October 9):1 [issue pagination].  [A “. . . bromide enlargement of a splendid view of the Grand canyon.  This picture is an immense affair and one becomes almost hypnotized by looking at it for several minutes.  The mile-deep canyon with the turbulent stream winding at the bottom seems to be real, the onlooker easily imagines himself looking over its edge.  The thing is wonderfully realistic.”  (entire note) The other view is a panorama of Salt Lake City.]

1909 2.16833 [Memorial to John Wesley Powell.] *In*: Scientific Notes and News [section]. *Science*, new series, 29(742)(March 19):449. ["The many friends of Major J. W. Powell, both in this country and abroad, will be glad to learn that congress appropriated $5,000 for the erection of a memorial to him, on the brink of the Grand Canyon of the Colorado which he explored." (entire item)]

1909 2.16470 Explorations in Grand Canyon. Mysteries of immense rich cavern being brought to light. Jordan is enthused. Remarkable finds indicate ancient people migrated for Orient. *Arizona Gazette* (Phoenix newspaper), (April 5):1, 7. [Regarding supposed Egyptian artifacts found in a Grand Canyon cave by G. E. Kinkaid. Although general newspaper items are not cited in this bibliography, this article is cited because it has a long citational following in numerous venues, usually without citation other than *Arizona Gazette* for 1909. "Jordan" is alleged to be Prof. S. A. Jordan of the Smithsonian Institution, who was conducting further explorations.]

1909 2.16471 Remarkable finds in Grand Canyon. *Deseret News*, (May 1):5 [issue pagination]. [Supposed discovery of Egyptian artifacts in Grand Canyon cave by G. E. Kinkaid, as reported in the *Arizona Gazette*.]

1909 2.14942 A monument to John W. Powell. *Mines and Minerals*, 29(11)(June):520. [Congressional appropriation of $5,000 for a memorial to John Wesley Powell at Grand Canyon. Also see item in the July issue.]

1909 2.16474 Taft gazes into the Grand Canyon. Arose early that he might see the color effects of sunrise over the great abyss. Arizona is enthusiastic. President favors statehood but warned territory against such a constitution as Oklahoma’s. Deseret News, (October 14):7 [issue pagination]. [William Howard Taft.]

1909 2.15793 Dairy show open. Daily Commercial Letter (Milwaukee, Wisconsin, Chamber of Commerce), 53(October 15, Second Edition, 1:30 P.M.):[2]. [“Touching a telegraph key at Grand Canyon, Ariz., 2,200 miles away, President William H. Taft opened the great dairy show at the Auditorium last night.” (entire item)]

1909 2.13018 [North Rim rail connection.] In: Along the Trail [section]. Santa Fe Employes’ Magazine (Railway Exchange, Chicago), 4(1)(December):90. [“Preliminary surveys are being made for a railway to connect the Grand Canyon of Arizona with the Salt Lake Route, which claims that the view is finer from its side of the canyon. This claim, however, will be taken with a grain of salt by those who have seen the canyon from the Williams side.” (entire note) N.B.: Santa Fe Railway had a vested interest in South Rim operations.]

1909 2.16049 [Plan to photograph Grand Canyon from kites.] In: Geographical Journal [section], Various [subsection]. American Geographical Society, Bulletin, 41(10):628. [“Late in July [Frederick Monsen] expected to visit Arizona for study among the Hopi and Navajo Indians, and after three months in their homes he planned to go to the Grand Canyon and try to photograph it by means of kites flying about 6,000 feet above the surface of the river.” (entire note)]

1910 2.16478 Party to hunt for two English lords. Deseret News, (January 17):1 [issue pagination]. [“In a desperate effort to find Lord Osborn Beauchlerck of Sussex, England, and Warlington Pike, of Victoria, B.C., whose whereabouts have been a mystery every [sic] since Nov. 10, a typical care-free young plainsman of Arizona, Albert Gonfaldo, accompanied by a party of five, will leave here [San Diego] Tuesday morning. They will sail around the Lower California peninsula. ¶On Nov. 15, Lord Beauchlerck and Pike left Yuma in a small boat for a hunting voyage down the Colorado river, intending to continue to La Paz, where they would take a coast steamer. Since then, not even the British consul at La Paz has had word of them.” (entire note)]

1910 2.16479 Relocation of Salt Lake Route. Destined to open up vast fertile territory. Deseret News, (February 5):2 [issue pagination]. [Also notes the possibility of a line from St. George, Utah, to Bright Angel Point at Grand Canyon.]

Baird, Brian

2008 2.14895 Statement of the Hon. Brian Baird, a Representative in Congress from the State of Washington. In: H.R. 3094, National Park Centennial Fund Act; and H.R. 2959, National Park Centennial Challenge Fund Act; Legislative hearing before the Subcommittee on National Parks, Forests and Public Lands of the Committee on Natural Resources, U.S. House of Representatives, One Hundred Tenth Congress, First session, Thursday, August 2, 2007; Serial No. 110-39. Washington, D.C.: U.S. Government Printing Office, pp. 8-21. [See p. 19: "I do not know that we have mentioned the international appeal of our National Parks. If you go to almost any U.S. National Park, you will see people who have traveled the world to get here. I had the privilege of kayaking the Grand Canyon about 15 years ago. ¶There was a couple from East Germany, actually, who had a picture of the Grand Canyon above their breakfast table and had looked at it every single day for 35 years and had set money aside. It was their dream to visit the Grand Canyon: 35 years, from a country pretty far away from us, to come visit a U.S. National Park, and that is the treasure. We have this opportunity.” (entire note)]
Baird, George D.

1906 2.16134 Picturesque New Zealand. *Western Field*, 8(3)(April):167-177. [See p. 167: “But if your dreams give you no peace until you see the very earth open and display the grandeur of its appalling depths, then stand on the rim of the Grand Cañon of Arizona and tremble as the solid earth yawns beneath you.” (entire note)]

Baird, Spencer F.

1859 2.1247 Appendix to the Report of the Secretary. *Smithsonian Institution, Annual Report for 1858*, pp. 44-62. (U.S. 35th Congress, 2nd Session, Senate Miscellaneous Document 49.) [See in “Explorations Under the War Department”: “2. Exploration of the Colorado river of California, under Lieutenant J. C. Ives, U. S. A.—Dr. J. S. Newberry, geologist and botanist, Mr. B. Mollhausen, artist and zoologist. Large collections were made in all departments on the Colorado and across to Albuquerque” (p. 50). (entire note)]

Baird, William Raimond

1914 2.14419 *Betas of achievement; being brief biographical records of members of the Beta Theta Pi who have achieved distinction in various fields of endeavor*. New York: Beta Publishing Co., 372 pp. [See John Willcock Noble, p. 236, Secretary of the Interior, 1889-1893, during which forest reservation policies were originated. Criticism “did not deter him from stretching his authority a trifle in order to preserve the banks of that greatest of our scenic wonders, the Arizona Grand Canon of the Colorado.” (entire note in this context)]

1876 2.15629 My circular notes. Extracts from journals, letters sent home, geological and other notes, written while travelling westwards round the world, from July 6, 1874, to July 6, 1875. Vol. II. London: Macmillan and Co., 331 pp. + advertisements. [See pp. 255-257.] [N.B.: Refers, p. 256, to James White story (but not by name) without note of Powell: "After flowing more than 600 miles through a very dry country, the waters escape from the mountains into Californian plains through a winding cañon, which is said to be 6,000 feet deep, and little wider than the water way. I have not seen this Grand Cañon, but I have spoken with many who have explored it as far as they could get. They say that it would be as possible to shoot Niagara and live, as to descend the Colorado." [with associated footnote:] "A book has been published in which a circumstantial account of the descent of the Colorado by a miner on a raft. Certain recorded events appeared inconsistent with each other, and I suppose that the story is mythical."]

Dawson, Thomas Fulton

2001 2.8541 The Grand Canyon; an article giving the credit of first traversing the Grand Canyon of the Colorado to James White, a Colorado gold prospector, who it is claimed made the voyage two years previous to the expedition under the direction of Maj. J. W. Powell in 1869. Phoenix: Five Quail Books, 67 [76] pp. (including wraps). [Facsimile reprinting of Dawson (1917), "with the addition of a bibliography of books, periodicals, newspapers, and unpublished works." Dated September 2001. Page [76] indicates, "150 copies in wraps, 50 copies in boards". *All but one of the stock in boards was lost to theft before distribution*. Surviving copies of this printing in the original state will only be with self-wraps, side-stapled. See the citation for 2nd printing, 2002 (Item no. 2.9277).]  

2002 2.9277 The Grand Canyon; an article giving the credit of first traversing the Grand Canyon of the Colorado to James White, a Colorado gold prospector, who it is claimed made the voyage two years previous to the expedition under the direction of Maj. J. W. Powell in 1869. Prescott, Arizona: Five Quail Books, 2nd printing, 67 [81] pp. [Facsimile reprinting of Dawson (1917), "with the addition of a bibliography of books, periodicals, newspapers, and unpublished works." Dated November 2002. "25 copies in boards, 5 copies in slipcase". Includes facsimile reprinting, on one folded leaf tipped in at rear, of the article by C. C. Parry (1868): "Account of the passage through the Great Cañon of the Colorado of the West, from above the mouth of Green River to the head of steamboat navigation at Callville, in the months of August and September, 1867, by James White, now living at Callville. Reported January 6, 1868, to J. D. Perry, Esq., Pres't of the Union Pacific Railway, Eastern Division, by C. C. Parry, Asst Geologist, U. P. R. Surv.", published in *Academy of Science of St. Louis, Transactions*, 2(April):499-503.] [This 2nd printing issued with publisher’s “Addendum” (1 leaf, laid loose), which states: "This is the second printing of Dawson's 1917 Senate Document No. 42 in hardback by Five Quail Books. The first printing, fifty copies in black buckram plus five in slipcases, were stolen; only one copy survived. The others have not been found as of this date and are presumed to have been destroyed. The first printing lacked the tipped in *The Transactions of the St. Louis Academy of Natural Science*[s] item and had not been numbered or signed. This new printing has additions to the bibliography plus this addendum." The Addendum includes additional bibliographical citations as well as the notice just quoted. The 2nd printing in boards is bound in dark green buckram, with matching slipcase for those so distributed. All copies are signed by "Dan Cassidy" of Five Quail Books. 1st printing in Phoenix (see Item no. 2.8541); 2nd printing in Prescott.]

Cotta'schen Buchhandlung, 278 pp. [And later eds.] [Colorado River, see pp. 203, 205-206, 221-222, 267.] [N.B.: This is but one example of the writings of Baron von Humboldt, pertinent citations of which many may include brief notices of the Colorado River in various contexts, published in numerous editions and translations otherwise omitted in this bibliography for the sake of practicality considering that the Colorado River was never a principal object of discussion.]

1810 2.14403 Ansichten der natur mit wissenschaftlichen Erläuterungen. Stuttgart: J. G. Cotta’schen Buchhandlung, 336 pp. (Gesammelte Werker van Alexander von Humboldt. Elster Band.) [Colorado River, see pp. 27, 29, 36, 102.] [N.B.: This is but one example of the writings of Baron von Humboldt, pertinent citations of which many may include brief notices of the Colorado River in various contexts, published in numerous editions and translations otherwise omitted in this bibliography for the sake of practicality considering that the Colorado River was never a principal object of discussion.]

1811 2.15422 General considerations on the extent and physical aspect of the Kingdom of New Spain, from Baron de Humboldt’s political essay on the Kingdom of New Spain. American Register, or General Repository of History, Politics and Science, 7:268-329. [Lower Colorado River region, see pp. 322-323, note.]

1812 2.14617 Atlas geographique et physique du Royaum de la Nouvelle-Espagne, fondé sur des observations astronomiques, des mesures trigonométriques et des nivellemens barométriques. Paris: Chez G. Dufour et Cie. [In this edition, author given as "Al. de Humboldt."] [Also reprinted in facsimile, 1969.] [N.B.: This is but one example of the writings of Baron von Humboldt, pertinent citations of which many may include brief notices of the Colorado River in various contexts, published in numerous editions and translations otherwise omitted in this bibliography for the sake of practicality considering that the Colorado River was never a principal object of discussion.]

1814 2.15584 Political essay on the kingdom of New Spain. Containing researches relative to the geography of Mexico, the extent of its surface, and its political division into intendancies, the physical aspect of the country, the population, the state of agriculture and manufacturing and commercial industry, the canals projected between the South Sea and Atlantic Ocean, the Crown revenues, the quantity of the precious metals which have flowed from Mexico into Europe and Asia, since the discovery of the new continent, and the military defence of New Spain. By Alexander de Humbolt.
With physical sections and maps, founded on astronomical observations, and trigonometrical and barmetrical measurements. Translated from the original French by John Black. Vol. I. Second edition. London: for Longman, Hurst, cxlv, 289 pp. [See pp. lviii-lx, 71-72.] [N.B.: This is but one example of the writings of Baron von Humboldt, pertinent citations of which may include brief notices of the Colorado River in various contexts, published in numerous editions and translations otherwise omitted in this bibliography for the sake of practicality considering that the Colorado River was never a principal object of discussion.]

1830 2.13381 Essay on the possibility of effecting a navigable communication between the Atlantic and Pacific Ocean. In: A select cabinet of foreign voyages and travels; or, recent and interesting journals of eminent continental travellers. London: Treuttel and Würtz, Treuttel Jun. and Richter; and Henry Washbourne, pp. 379-416. [See pp. 385-386, notice of the Colorado River. In translation.] [N.B.: This is but one example of the writings of Baron von Humboldt, pertinent citations of which many may include brief notices of the Colorado River in various contexts, published in numerous editions and translations otherwise omitted in this bibliography for the sake of practicality considering that the Colorado River was never a principal object of discussion.]

| Le Gobien       | 1762 | 2.15417 | To the Jesuits of France.                                             | In: Lockman (Mr.), Travels of the Jesuits, into various parts of the world: particularly China and the East-Indies. Intermix'd with an account of the manners, government, civil and religious ceremonies, natural history, and curiosities, of the several nations visited by those Fathers. Translated from the celebrated Lettres edifiantes & curieuses des Missions estrangeres, par les Missionaires de la Compagnie de Jesus. A work so entertaining and curious, that it has already been translated into most of the European languages. This work is illustrated with maps and sculptures, engraved by the best masters. To which is now prefixed, An account of the Spanish
settlements, in America, with a general index to the whole work. [London]: printed for T. Piety, 2nd ed., corrected, pp. 348-356. [See p. 356, Colorado River, in passing.]

Scenic structure. Specification forming part of Letters Patent No. 678,012, dated July 9, 1901. Application filed August 10, 1900. Serial No. 28,460. (No model.) U.S. Patent Office, 3 pp. [Patent for “a new and useful Improvement in Scenic Structures”. “This invention relates to an improved scenic structure for more completely giving pictorial representations of objects—as, for example, landscapes . . . .” “The scene (usually a landscape) is painted upon the background . . . and upon the wings, according to the nature of the view. If this part of the work be done artistically, the effect is very pleasing to the ye, and an accurate impression of the natural scene can be conveyed even in cases when an ordinary drawing or flat picture does not succeed. This is notably true of such views as the Grand Cañon of the Colorado, where it is extremely difficult by ordinary means to give a correct impression of the vastness of the scene coupled with the descent of the ground before the eye, and which can be very successfully done by this means.” (entire note of pertinence)]
