### COMPUTER AND INTERACTIVE MEDIA FOR THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS

**Computer media and selected digital media for personal devices, which include the  
Grand Canyon or the lower Colorado River region**

PART 29. COMPUTER AND INTERACTIVE MEDIA FOR THE GRAND CANYON  
AND LOWER COLORADO RIVER REGIONS

**OVERVIEW.** This part includes items that were released only in a computer-readable format. Digital materials that were released as supplementary files to printed articles and books, although so indicated in citations elsewhere in this bibliography, are not separately included in this part. Also included are announcements and similar items regarding media that are designed for digital personal-pad products such as iPhone, iPad, iPod Touch, or Android [some products in use as of 2014, for example]. Further included here are articles that may explain how certain computerized media were created. Web-based media are generally excluded from this bibliography due to the likelihood of individual products being inaccessible in the future. Personal (hand-held) media such as Kindle editions of books are likewise excluded because of their narrowly restrictive limitations to proprietary products and inconsistent data on provenance and availability (as well as uncertainty of future accessibility). While the definition of such products has blurred—for example, CD-ROM products including audio recordings can be construed to be “computer media”—the focus of this part of the bibliography is on graphical and interactive material; for example, map programs, interactive travel guides, older-style “screen savers”, and games. While web-based media are omitted due to their ephemeral nature (see below), included here are announcements and similar items that pertain to digital personal-pad devices (“apps”, or applications); this is to make known bibliographically the existence of these products through the publications that were used to promote them. The “apps” themselves are not cited because, as like their web-posted counterparts, the ability to acquire these things in the future will diminish to zero.

**RELATED MATERIAL**

[PART 11, SECTION 2A](#) and [PART 24](#) include citations of digital geological maps that may be printed out. [These are also cited in [THE GRAND CANON Volume 2 \(Cartobibliography\)](#).]

### Glu Mobile

2007 29.110 *Transformers.* [No place]: Glu Mobile. [For a guide to the digital-display game see Moriarty (2007, ITEM NO. 7.803). Single-player game is based on the film [*Transformers*; see DreamWorks (2008), ITEM NO. 26.430], thus the storyline reflects the cinematic vision displayed in the movie. “Megatron, who crash-landed on Earth searching for the AllSpark, is obtained by the American government and held in the Hoover Dam. Meanwhile, the Autobots learn of the AllSpark’s existence on the planet and try to acquire it before the Decepticons, led by Megatron, obtain it.” (p. [2] of Moriarty.)]   
 REVIEWS AND NOTICES Anonymous, 2007, ITEM NO. 30.1383

---

### Gushue, Thomas M.

2019 29.119 Colorado River mile system, Grand Canyon, Arizona. *U.S. Geological Survey, Data Release*, <https://doi.org/10.5066/P9IRL3GV>. [USGS ScienceBase link: <https://www.sciencebase.gov/catalog/item/5b2185ace4b092d96528747b>.] [Glen Canyon Dam to Pearce Ferry. “These data represent the centerline and measured increments at hundredths, tenths and whole miles, along the centerline of the Colorado River beginning at Glen Canyon Dam near Page, Arizona and terminating near the inflows of Lake Mead in the Grand Canyon region of Arizona, USA. The centerline was digitized using Color Infra-Red (CIR) orthophotography collected in March 2000 as source information and a LiDAR-derived river shoreline representing

PART 29. COMPUTER AND INTERACTIVE MEDIA FOR THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS

8,000 cubic feet per second (CFS) as the defined extent of the river. Every effort was made to follow the main flow of the river while keeping the line approximately equidistant from both shorelines. The centerline feature class has been created to more accurately map locations along the Colorado River downstream of the Glen Canyon Dam. River miles and river kilometers were developed from measurements along this line. The incremental point feature classes were derived from the centerline of the Colorado River datasets. Specifically, the points were generated from nodes extracted from the centerline endpoints of the tenth mile line feature class. The Grand Canyon Monitoring and Research Center (GCMRC) river mileage was cross-checked with commercially available river guides and always fell within one mile of the guides, usually corresponding within a half mile. Additionally, these data were subjected to internal review by GCMRC scientists and commercial boatmen with decades of river travel experience on the Colorado River. River Mile 0 was measured from the USGS concrete gage and cableway at Lees Ferry, Arizona—as per the Colorado River Compact of 1922—with negative river mile numbers used in Glen Canyon and positive river mile numbers downstream in Marble and Grand Canyons. These data were updated in March 2015 using newer ortho-rectified imagery collected in May of 2009 and 2013, both at approximately 8,000 CFS. Due to extended drought conditions that have persisted in the U.S. Southwest, lake levels have dropped dramatically, especially at Lake Mead. A stretch of the Colorado River corridor that was part of Lake Mead in year 2000 has returned to a flowing river once again, and with a different channel that has not previously existed. All changes to the original centerline are downstream of River Mile 260 which is just upstream of Quartermaster Canyon in western Grand Canyon. New river miles and river kilometers were developed from this updated centerline.”] 🌐🌐🌐

AND LOWER COLORADO RIVER REGIONS

## U

### Ukledo [firm]

- 2018 29.103 *Virtual Universe (VU) : an epic, story-driven, open world adventure in LivingVR™ powered by Virtual Reality, Artificial Intelligence and Blockchain : whitepaper.* [Cayman Islands]: Ukledo (Blockchain Research and Development Company), 24 [25] pp. [Descriptive document for open world virtual reality software. “Open world: A style of game in which minimal character limitations are placed on the gamer, allowing the gamer to roam and change a virtual world at will. In contrast to a progression-style game, a[n] open world game emphasizes roaming and allows a gamer to select tasks.”] [See p. 22, “The Grand Canyon Experience (GCE)”, a product introduced in 2013.] 🏔️

### U.S. National Aeronautics and Space Administration, Langley Research Center

- 2017 29.115 *Grand Canyon Regions of Drought Impact (GC-ReDI).* [Hampton, Virginia]: U.S. National Aeronautics and Space Administration, Langley Research Center, accessible through the NASA Technology Transfer Program at <https://software.nasa.gov/software/LAR-19017-1> or <https://github.com/NASA-DEVELOP/GC-ReDI>. [Accessed 22 August 2019.] [Description notes: “This Google Earth Engine software quantifies the decreasing water surface area in Lake Mead and the lower Grand Canyon and assesses the resulting changes in land cover—specifically, riparian vegetation and riparian sediment. The software provides images, statistics, and graphs to understand these changes.”] 📄

### U.S. National Park Service

- NO DATE 29.122 *General Management Plan : August 1995* [Grand Canyon National Park]. [Ca. 2001.] [Electronic document, comprising both the *Draft* and *Final General Management Plan and Environmental Impact Statement, Grand Canyon National Park, Coconino and Mohave Counties, Arizona* (U.S. National Park Service, 1995, ITEM NOS. 13.1328, 13.1329, respectively). [NOTE: The *Final General Management Plan and Environmental Impact Statement* refers in many ways back to the *Draft* plan, thus the *Draft* serves unusually as an integral part of the *Final* plan.]
