Cover: The Colorado River Then and Now (see page iv)

## Volume 1, Part A INTRODUCTION, STATISTICS, SURVEYS AND COMMENTARIES

#### THIS IS A HYBRID DIGITAL DOCUMENT IN BOOK LAYOUT

DIGITAL USERS: The entire text of this PDF document is searchable; use your program's "FIND" command. Hyperlinks also appear throughout. To view it in book format with opposing pages, use the appropriate viewing mode with the cover page separate so that odd-numbered text pages appear on the right. A wide screen is essential for convenient two-page viewing. An opposing-page display is, however, not mandatory for the use of this volume.

NON-INTERACTIVE USERS: The CONTENTS pages (pp. XI-XIII) list the physical page numbers for the entire volume. Major units are separately paginated. A page-numbered table of contents for the bibliography only appears at the beginning of the bibliography (which begins following INTRODUCTION PAGE 568).

#### NOTE TO NEW USERS

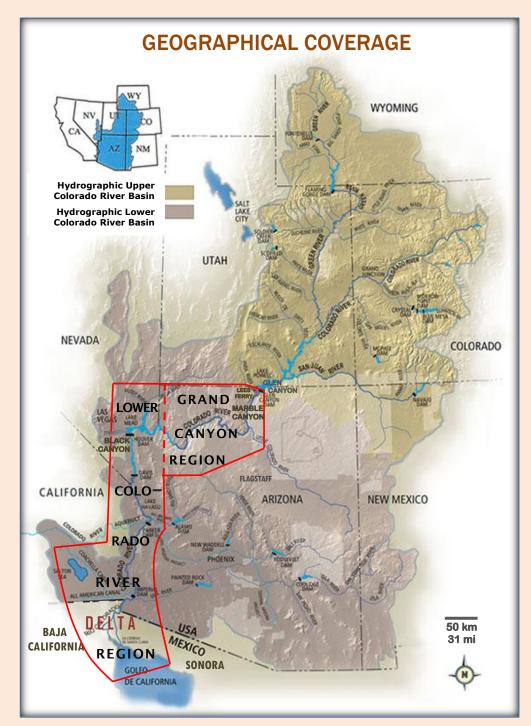

THE GRAND CANON is now a series of four volumes: Volume 1 is in two parts; Part A is the extended Introduction, Statistics, Surveys and Commentaries, and Part B is the Bibliography. Volume 2 is the Cartobibliography. Volume 3 is the compendium, Grand Canyon, Colossal Mirror: The Term "Grand Canyon" as Used in Geographical Nomenclature, Analogy, Metaphor and Neology.

This is a definitive source—a **canon**. It can be extracted from, and further, it can serve as a foundation for greatly embellished or refined resources. Read as necessary the <u>Executive Overview</u>, the <u>Preamble</u>, or the one-page <u>Abstract</u>, with which one may also promote THE GRAND CANON.

The bibliography (Volume 1/Part B) is the core of the entire Grand Canyon–Lower Colorado River Bibliography project, presented in 32 topically distinct parts. To it is added the Cartobibliography containing its own introduction and extensive chorographical notes.

Other than the bibliography itself, so much is presented in Volume 1/Part A for several reasons. This is meant to serve for a long time and to answer questions, particularly when I am no longer able to do so. Users may want explanations for why the material is here, how it was assembled, what it can do for them, and how they might want to move ahead with more ambitious projects. I take advantage of four decades of professional experience I gained while working with researchers in museums and libraries, learning from their needs and expectations, all this during the transition from "analog" to "digital" methods and resources. Editorially inclined users may object to some repetitive information in the Introduction. I counter with the observation that many users who have either grown into or grown up with digitally accessed resources will proceed into this one in the selective, hyperlinked fashion to which they are accustomed, perhaps never noticing the remainder as easily as with a hardcopy product.

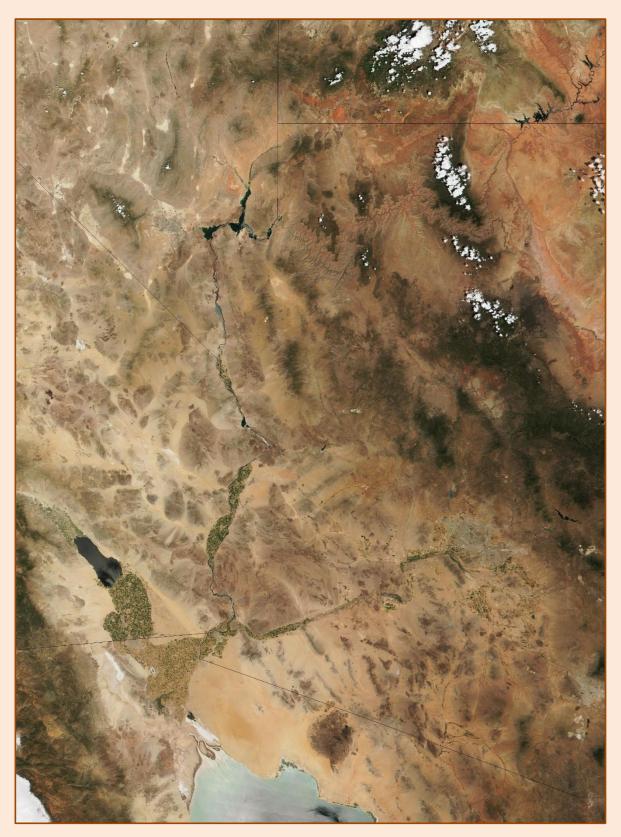

The very lengthy Introduction to Content and Coverage in the present volume explains the history, components, and organization of the bibliography. See the Volume Contents for details. It adds informative surveys and commentaries on bibliography and on where THE GRAND CANON stands with respect to other resources that have been compiled for the Grand Canyon–lower Colorado River region and other areas. Historical and geographical perspectives of the region are provided. Also offered is an argument in support of the continued use of bibliographies in the digital age, and the service this one can provide in revitalized ways long into the future, an inspiration for new projects and partnerships—perhaps even as a source for analytical studies utilizing Artificial Intelligence.

Approximate geographical area covered in THE GRAND CANON, embracing the Grand Canyon and lower Colorado River regions. It follows the river corridor from Glen Canyon Dam to the river's delta and the Gulf of California. The boundary in the gulf encompasses Mexico's Reserva de la Biosfera Alto Golfo de California y Delta del Río Colorado, and in Sonora embraces part of Reserva de la Biosfera del Pinacate y Gran Desierto. (THE GRAND CANON defines "Lower Colorado River" as that region below Grand Canyon, which differs from the hydrological Lower Colorado River Basin that begins below the confluence of the Paria River at Lees Ferry and incorporates the sub-basins of all tributary streams, including the Little Colorado and Gila Rivers.)

————— Approximate division between "Grand Canyon" and "Lower Colorado River" thematic regions of THE GRAND CANON.

Base map of Colorado River drainage basin modified from U.S. Bureau of Reclamation, Glen Canyon Dam Adaptive Management Group. The Upper and Lower Colorado River Basins delineate the apportionment of the waters of the Colorado River basin by the Colorado River Compact of 1922; divided just downstream from the confluence of the Paria River near Lees Ferry. Dams and impoundments are indicated on the map. Lighter-gray areas, not labeled, are American Indian reservations. Basin boundary is not depicted in Mexico. (For a map of the physiography and political geography of the Colorado River basin (including Mexico) see in the "Format and Coverage" section of this volume [p. 82].)

Space view of the greater Grand Canyon and lower Colorado River regions. Moderate-resolution Imaging Spectroradiometer (MODIS) true-color image from the Aqua satellite, 7 June 2001. The Colorado River is seen from Lake Powell, Utah (*UPPER RIGHT*), to the Gulf of California, Mexico (*BOTTOM*). Lake Mead is at the river's turn from west to south in the *UPPER LEFT* quadrant of the photo. The Salton Sea and Imperial and Mexicali Valleys are in the *LOWER LEFT*, with the Gila River coming to the Colorado from the east, at *LOWER CENTER*. Irrigated lands are the noticeable patchworks (note as well the disparity in color between the U.S. and Mexico). White areas at *UPPER RIGHT* are clouds over higher elevations. (The fine lines delineate state and international boundaries. North is to the top.)

A Worldwide Bibliography of the

Grand Canyon and Lower Colorado River Regions in the United States and Mexico 16th to 21st Centuries

The Grand Canon not The Grand Canyon

ALL VOLUMES OF THE GRAND CANON, AS WELL AS INDIVIDUAL PARTS, MAY BE DOWNLOADED FROM RAVEN'S PERCH MEDIA

THE GRAND CANON is not a commercial product and is not distributed by sale. The author receives no remuneration or services for the preparation or distribution of this product. The contributors of bibliographical citations and information are not are in any way responsible for the production or distribution of this work. Citations or remarks that mention <sup>®</sup>Registered Trademarks, <sup>TM</sup>Trademarks, <sup>SM</sup>Service Marks, or other protected names and identifiers are not here endorsements of those products or services. The inclusion of a citation in this work documents only its existence; views expressed therein do not necessarily represent the views of the author or any of the bibliographical contributors. Quotations from works are made as critical analyses for bibliographical identification, to corroborate and elucidate for users the pertinence of the cited work to the bibliography or to confirm subject placement within the scope of this work, and as aids for users to identify the whole of a published work that may be pertinent to their work or interests. Ascertaining the availability or accessibility of cited items is the responsibility of the user.

This publication is originally produced in a searchable-text PDF format, which requires the use of the free  $Adobe^{TM}$  Acrobat Reader. It is designed as a book for screen viewing or printing. To view it in book format with opposing pages, use the appropriate PDF viewing mode so that odd-numbered pages appear on the right. Any page may be reduced or enlarged without degrading text or original image quality.

<sup>\*</sup> Regarding the Catalogers' Note, see remarks on p. Q in the Preamble

#### REPRODUCTION AND FAIR USE

© 2025 Earle E. Spamer\* • No commercial or for-profit use of this work, in whole or in part, is allowed without the author's permission. Not-for-profit organizations, educational institutions, government agencies, and Indigenous communities may with credit extract from this work for purposes of resource management and interpretation, education, and public outreach; they also may download the entire document for cataloging and inclusion in their digital products collections, and they may freely allow users to copy this document for their use if it does not violate either the conditions given here or specific limits of copyright law that may not be waived by this fair-use statement. Reuse of this work, in whole or in part, for any purpose, must cite author, title, publisher, and notice of copyright. Academic or other individual researchers may copy selections for personal reference and may quote from this work following best practices of acknowledgment in scholastic research.

Replication of the entire document is permitted in order to ensure preservation or to migrate to different software, or medium not now in existence, when the technology to use the original digital copy is unsupported, inadequate, or obsolete. Documentary copies of this work in a non-digital medium are permitted for reference use or to preempt the loss of the work due to technological change that may no longer permit this work to be accessed by the means for which it was originally designed.

This statement does not supersede copyrights held by the original sources of items cited or quoted in this work.

Not only is this personal note a matter of family respect, but after my time the name is bound to be uncorrectably mispronounced. It retains the German back vowel "a" as in the English "spa" or "father"; it is not "spammer" nor "spaymer" although in England at least the latter is preferred by some Spamers there. Further, in this current age of digital "spam", a pejorative term, I have experienced a form of cultural censure when my email messages are robotically rejected due to a mistaken connotation with "spammer", sometimes misspelled "spamer" (though why a true spammer would advertise themself openly is beyond me). In 2004 my personal plight even was mentioned by name by information technology columnist Reid Goldsborough ("Prevent Spam Filters From Blocking Legitimate e-mail," in "Personal Computing" syndicated column in electronic and print media, October 29, 2004). An online-accessible text of this article was found more recently, August 20, 2024:

 $\underline{https://www.diverseeducation.com/home/article/15080306/prevent-spam-filters-from-blocking-legitimate-e-mail.}$

<sup>★</sup> Darker-shaded units are now incorporated in Volume 2, CARTOBIBLIOGRAPHY OF THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS. See notes that accompany these appendices and PART 25.

#### CONTENTS FOR VOLUME 1, PART B (BIBLIOGRAPHY) (INFORMATIONAL ONLY, NO LINKS)

#### **ADDITIONAL GUIDES**

- 30 BOOK REVIEWS AND SIMILAR NOTICES REGARDING PUBLICATIONS ABOUT THE GRAND CANYON AND COLORADO RIVER REGIONS
  - SUPPLEMENT—POTENTIALLY OFFENSIVE MATERIAL CITED SEPARATELY
- 31 NEWSPAPER GUIDE FOR THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS
- 32 MARGINALIA RELATING TO THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS

#### APPENDICES TO THE BIBLIOGRAPHY

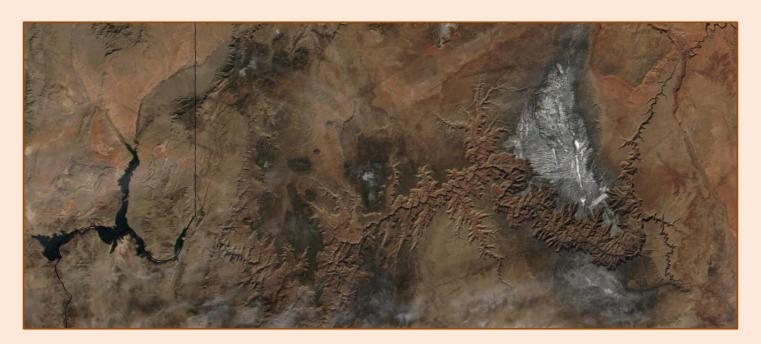

- I The Leipzig Imprints of Balduin Möllhausen's Reisen in die Felsengebirge Nord-Amerikas bis zum Hoch-Plateau von Neu-Mexico (1860, 1861)
- II Variants of Ellsworth L. Kolb's *Through the Grand Canyon From Wyoming to Mexico* (1914–2018)
  Richard D. Quartaroli, COMPILER
- III Variants of N. H. Darton's Story of the Grand Canyon (1917–1987)
- IV Variants of Edwin D. McKee's Ancient Landscapes of the Grand Canyon Region (1931-2020)

Take the Grand Canyon, for example. Even if we can use some modern technology to take us 'there', ... understanding it is absolutely different from our actual experience there.

— Jialing Li

"On Feng Youlan's Perception and the Meaning of Life." Journal of Humanities, Arts and Social Science, Vol. 7 (2023), no. 6, p. 1114 • THE GRAND CANON VOLUME 1, PART A—INTRODUCTION •

# DETAILED SPACE VIEWS AND HISTORICAL CONTEXT MAPS OF THE REGION COVERED BY THE GRAND CANON

▲ Space view with MODIS sensor imagery, 19 January 2002, of lower Glen Canyon and Marble Canyon AT RIGHT, Grand Canyon FROM RIGHT TO LEFT, and Lake Mead AT FAR LEFT. The snow-covered Kaibab plateau is to the RIGHT. (The fine line delineates the Arizona–Nevada boundary. North is to the top.) (U.S. National Aeronautics and Space Administration, Visible Earth catalog. Image Grand Canyon.A2002019.1820.250m.jpg (cropped here). Image created by Jacques Descloitres, MODIS Land Rapid Response Team, NASA/GSFC.)

Space view of a hydrologically diminishing Lake Mead as seen by the Operational Land Imager aboard Landsat 8 on 24 July 2015. North is to the top. Black Canyon extends to the SOUTH from Lake Mead; Hoover Dam is seen as a tiny white spot at the NORTHERN END of Black Canyon. The Overton Arm extends to the north, showing the confluence of the Virgin (COMING FROM NORTH) and Muddy (COMING FROM NORTH-WEST) rivers. Las Vegas Wash empties into Lake Mead on the WEST SIDE of the image. The city of Boulder City, Nevada, is immediately to the SOUTHWEST of the lake; Las Vegas is the prominent urban area on the LEFT. (Metropolitan Las Vegas does not fall within the scope of this bibliography.)

(U.S. National Aeronautics and Space Administration, Visible Earth catalog. Image lakemead\_oli\_2015205\_lrg.jpg. Image created by Joshua Stevens using Landsat data from U.S. Geological Survey and Lake Mead elevation data from U.S. Bureau of Reclamation.)

https://visibleearth.nas.gov/view. php?id=86426

► Space view of the Colorado River, AT RIGHT SIDE OF PHOTO, coming into the Colorado River delta and Salton Sea regions from the north; as seen in Moderate Resolution Imaging Spectroradiometer (MODIS) image, 2 October 2003. (The fine lines delineate the U.S.-Mexico boundary.) The light green areas in the Salton Sea are algal blooms or sediment plumes. The Imperial Valley of California, noticeable for its irrigated lands, extends from the SOUTHERN SIDE OF SALTON SEA to the U.S.-Mexico boundary, continuing to the south as the Mexicali Valley in Baja California, Mexico. Yuma, Arizona, is to the east at CENTER FAR RIGHT, where the northern U.S.-Mexico boundary touches the Colorado River. The irrigated Coachella Valley is to the NORTHWEST OF SALTON SEA. The irrigated Palo Verde and Cibola Valleys are along the Colorado River at the UPPER RIGHT of image. The Algodones Dunes are seen as the linear, plain tan area between the Imperial Valley and the Colorado River, JUST TO THE RIGHT OF CENTER. The Gran Desierto de Altar in Sonora, Mexico, is the large, plain tan area in the LOWER RIGHT part of the image. The irregular, white Laguna Salada of Baja California lies to the west (LEFT) of the irrigated Valle de Mexicali. The Ciénega de Santa Clara wetland of Sonora (see also image below) is the linear darkgreen area at LOWER RIGHT. The dry mouth of the Colorado River, with its noticeable Isla Montague dividing it in the Gulf of California, is at FAR LOWER

(U.S. National Aeronautics and Space Administration, Visible Earth catalog. Image SaltonSea.A2003275.2100.250m.jpg (cropped here). Image created by Jacques Descloitres, MODIS Land Rapid Response Team, NASA/GSFC.)

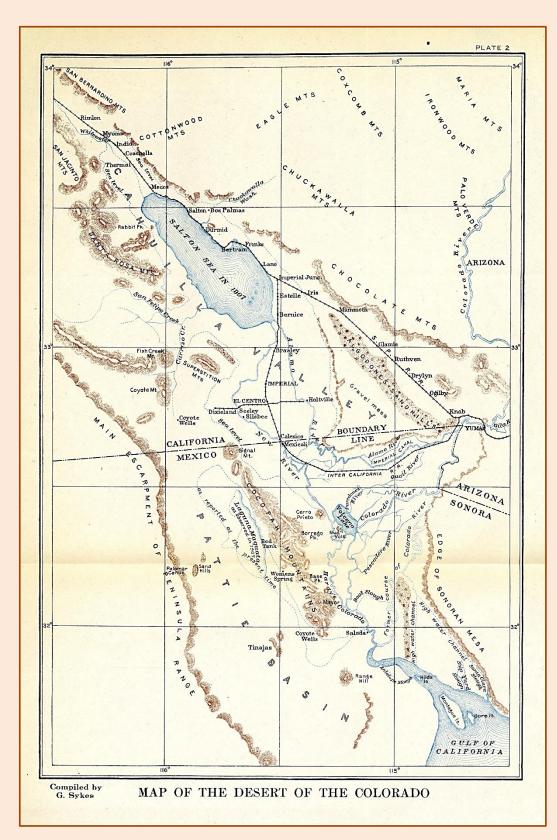

■ Space view of the lowermost region of the delta of the Río Colorado in Sonora (RIGHT SIDE) and Baja California (LEFT SIDE), Mexico; seen in false-color Spaceborne Thermal Emission and Reflection Radiometer (ASTER) imagery from the Terra satellite, 8 September 2000. North is to the top. A confusion of arcuate scars of former Colorado River channels are seen on either side of the river as it approaches its final channel to the sea. The Ciénega de Santa Clara wetland, artificially created by agricultural waste water flow from the U.S.'s Wellton-Mohawk project, is the noticeable dark green area to the east of the river up against the expanse of the Gran Desierto de Altar. At the mouth of the river, at the head of the Golfo de California, the river's flow (were it to regularly reach the sea) is divided by Isla Montague, itself a sedimentary remnant of past great flows from the Colorado River basin.

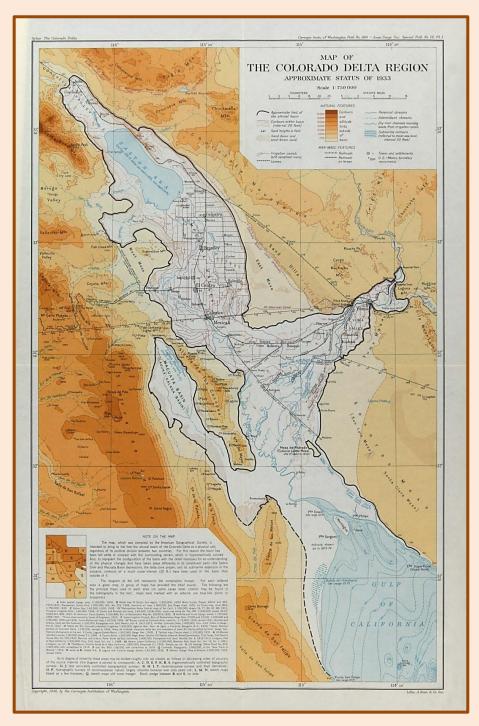

(U.S. National Aeronautics and Space Administration, Visible Earth catalog. Image aster\_colorado\_delta\_lrg.jpg. Image created by NASA/GSFC/MITI/ERSDAC/JAROS, and U.S./Japan ASTER Science Team.)

https://visibleearth.nas.gov/view.php?id=1288

The Salton Sea-Colorado Desert region in contemporary perspective with events of the early 20th century.

Godfrey Sykes, Plate 2 *in* D. T. MacDougal *et al.*, The Salton Sea: A study of the geography, the geology, the floristics, and the ecology of a desert basin, *Carnegie Institution of Washington*, *Publication 193*, 1914.

The Colorado River delta forms a T-shaped area as shown in this map. Historically, occasional Colorado River overflows descended to the northwest rather than to the south and the Gulf of California. During recent times the river has flowed twice into the Salton Sink, below sea level—once in the 1890s when it overflowed naturally to reform the Salton Sea, and again in the early 1900s when an accidental breach of canalworks let it flow catastrophically unchecked for nearly two years to fill the present Salton Sea. For more than a century irrigation in the Imperial and Mexicali Valleys has provided rich farmland in the desert (note the latticework of canals and irrigation drains depicted on the map).

Plate I from Godfrey Sykes, The Colorado Delta, Carnegie Institution of Washington Publication 460 / American Geographical Society of New York Publication 19, 1937.

#### NOTE ABOUT HYPERLINKS

Throughout this PDF (Portable Document Format) volume, occasional URL (Uniform Resource Locator) hyperlinks direct users to various websites and webpages hosted throughout the internet. In the bibliography they most often link to "supplemental" or "supporting" materials for a publication that were posted to publishers' websites. Similarly, various citations will refer to publications by their "doi:" (Digital Object Identifier) number.

All links and identifiers were current at the time of citation but have not generally been updated; the doi's are created to be persistent, but URLs are ephemeral. If a user finds a cited hyperlink that is no longer current, it nevertheless preserves historical and bibliographical perspective. It is not feasible for the compiler to routinely locate updated links because it is not known whether the original URL (or even its domain) has changed, or whether the document has been removed from the host website. Broken links also serve as object lessons of their uselessness to future researchers, although in some cases an archived copy—though one not necessarily perfect—may be accessible elsewhere (for example, through the Internet Archive Wayback Machine, <a href="https://archive.org/">https://archive.org/</a>). Individual users may also have digitally saved or printed some of these materials, which then may be preserved in the individual's collected papers or other collections. In the future such kinds of "light gray literature" might be rediscovered in unexpected places and which feasibly could be the only surviving record of that material.\*

(If readers use a PDF of any of the SEPARATELY EXTRACTED PARTS OF THE BIBLIOGRAPHY, such as are available at the Raven's Perch Media website, <a href="https://ravensperch.org">https://ravensperch.org</a>, a hyperlink will be active if it directs to a URL accessible on the web, or internally only if it links to another place inside that part of the bibliography. A link to another part within the whole volume of THE GRAND CANON will not be active because the user is viewing only one extracted part.)

<sup>\*</sup> Earle E. Spamer, "What a woven web: archives, websites, and the coming legacy of 'light gray literature.'" *Provenance*, Vol. 20 (2004 [for 2002]), pp. 59-71 (https://digitalcommons.kennesaw.edu/provenance/vol20/iss1/8/; last accessed 21 December 2024).

#### PRINCIPAL CONTRIBUTORS

These people are gratefully acknowledged for having been substantial contributors of bibliographical data to the Grand Canyon–Lower Colorado River bibliography project during 1974–2024.

Affiliations are listed from the time when the person was involved.

#### George H. Billingsley

Museum of Northern Arizona, Flagstaff
AND
U.S. Geological Survey, Flagstaff

#### William J. Breed

The Special Collections Librarian\*, Cline Library, Northern Arizona University, Flagstaff

<sup>\*</sup> now Emeritus; a continuing contributor

#### **ACKNOWLEDGMENTS**

ONE MIGHT CORRECTLY suppose that an endeavor as long and as involved as the Grand Canyon–Lower Colorado River bibliography project, begun in 1974, that many people beyond those of the Principal Contributors listed above have participated in some fashion to the discovery and communication of citations for the bibliography (and now the cartobibliography, too). The Acknowledgments sections of previous editions of the Grand Canyon–Lower Colorado River bibliography—from the inkprint versions of 1981, 1990, and 1993, the digital database inaugurated in 2000, and the first edition of the reinstituted monograph, THE GRAND CANON—amply serve as a lifetime's appreciation over now more than 50 years. These I will recite first, to which I also repeat—thank you all!

## PREFACE TO 1981 EDITION [includes acknowledgments]

Originally published in *Grand Canyon Natural History Association Monograph 2*, p. 3

In the Autumn of 1974, as a student studying geology, I became aware of the absence of a bibliography of the geology of the Grand Canyon region. Wishing one for my own use, I set about compiling the bibliography. Time and again, however, I came across references that did not deal strictly with Grand Canyon geology, but on other aspects of Grand Canyon science and history. My love for old books and journals led me also to the wonderful 19th-Century popular articles about the Grand Canyon and the Colorado River.

At one point—just when, I no longer remember—I decided to compile a bibliography on all subjects about the Grand Canyon. The present work is the result; but, had I known beforehand of the tremendous amount of literature on the subject, and the time that I would have to devote to this project, I doubt if I would have pursued the task.

If the number of articles and books that have been written about the Grand Canyon is an indication, the Canyon has a spectacular influence on the human mind and spirit. Exclamations and superlatives—even exaggerations—are the general order. The effect on man has remained the same over the years, but man's effect on the Canyon has changed. We have only to witness America's siege of the National Parks to appreciate the tenuous balance of preservation and utilization. The Grand Canyon is one of the more fortunate parks, though.

Too wild and too abrupt to permit passage by most of the visitors who come to its edges, the delicate ecology of the Inner Canyon is strained by the relative few who do venture beneath the rims, or who travel down the Colorado River. Over the decades, the evidence of increasing popularity and decreasing natural quality is all too clearly seen in the changing themes of articles written about the Canyon. With care, reason, and sacrifice, man's continuing degradation of the Inner Canyon wilderness can be arrested.

The Grand Canyon is a classic geologic locality. It stands to reason, then, that the largest section of this bibliography is devoted to geology [this is no longer the case]. For the benefit of the stratigrapher, sources on the stratigraphic continuity of the Canyon's rock formations are included, as well as sources on regional tectonics and geophysics. I hope this expansion will be more help than hindrance to those students and professionals who use this work.

In Part 3 (geology) [parts were reorganized and renumbered in later editions], the user will note that I am not the sole compiler. In 1978, when I was completing the first draft of the bibliography, the Department of Geology of the Museum of Northern Arizona, in Flagstaff, contacted me about my work. I learned that they, too, were completing a bibliography of Grand Canyon geology that had been started by Grace Keroher, of the U.S. Geological Survey, and later continued by George Billingsley and William J. Breed, of the Museum. I was subsequently offered coauthorship of the bibliography if my work could be incorporated with the Museum's. Since then, I have added from the Museum's bibliography the geology references that I had missed. The difference between the two bibliographies is that the Museum's is restricted to the geology of the Canyon-proper. The Museum's bibliography remains unpublished at this time.

As for the rest of the bibliography, while it has been mostly a single-handed effort on my part, certain people have provided invaluable help. I wish to sincerely thank Louise M. Hinchliffe, Grand Canyon Natural History Association [National Park Service]; Dorothy M. House, Museum of Northern Arizona; and the library staff at the Academy of Natural Sciences of Philadelphia.

The Research Library at Grand Canyon National Park is a rich source of Grand Canyon material. The Grand Canyon library is unfortunately unable to provide copies nor loan their holdings, but free use by researchers can be arranged by appointment at Grand Canyon.

Some references in this bibliography, by nature of their subjects, had to be listed in more than one section. However, fewer than 40 I believe have been so listed, and the size of the bibliography is not exaggerated by redundant listing.

A jump in total references appears in the two decades of the 1920s and 1930s. "Grand Canyon Nature Notes" was published at the Park from 1926 to 1935. Many of these articles offer a brief and informal look at Grand Canyon happenings during this time, and have a

rather folksy tone. This is especially apparent in Part 4 (biology and ecology). The user of this bibliography—in particular the scientific researcher—should be aware that the gold mine in 1920s-1930s references is illusionary. The many "Nature Notes" articles do make fun reading, though, for anyone interested in the Canyon.

Each user of the bibliography will have a different task in hand. I have tried to make this list exhaustive, and I can only apologize to any authors whose works I have overlooked, and for errors that may have slipped past. I would like to have these oversights brought to my attention. Likewise, constructive criticism and suggestions for future supplements will be most welcome.

E.E.S. July 4, 1980

#### **ACKNOWLEDGMENTS FROM THE 1990 EDITION**

Originally published in *Grand Canyon Natural History Association Monograph 8*, pp. xi-xii. (Corrected for inclusion with the 2000 Internet Edition and here copied from that edition.)

Since 1974, when this bibliography got its start, I have met or corresponded with many people who share a common interest in the Grand Canyon and the Colorado River. Without their contributions, my job would have been not only more difficult, but less interesting. Even though this is a wholly new bibliography, with its own roster of generous contributors, I should also reacknowledge all those who helped make possible the first volume, published by the Grand Canyon Natural History Association in 1981.

I must first express my appreciation to the staffs of the outstanding libraries where I obtained virtually all of my references. The Library of the Academy of Natural Sciences of Philadelphia was my foremost resource. When I began working on the bibliography I was not then on the staff, but I was treated with the same professional courtesy as though I were. The librarians tolerated innumerable requests for whole cartloads of publications from the stacks, although I suspect that they would have much more appreciated my use of the library if I had been an Academy staff member with stack privileges. (Now I understand and appreciate their work all the more.) But most significantly, through a mutual misunderstanding, graciously set straight long after the fact, I was allowed to withdraw large numbers of publications which I was able to photocopy elsewhere for my own library (although I also spent many long hours at the Academy's copy machine). This remarkable set of circumstances was the one thing which eventually made it possible for me to begin my studies of the Canyon. To the Librarian of the Academy and her kind predecessors and staff, I thank you for unwittingly setting me on this path in life. [Little did I know that I would become the Archivist of the Academy, 2001–2005.]

The Van Pelt Library at the University of Pennsylvania, Philadelphia, and various other libraries on campus were important supplementary research sources. Librarians there dutifully tracked down erroneously cited references and helped me deal with difficultly translated abbreviated citations. The East Asia Bibliographer helped locate copies of miscited and mistranslated references in Chinese. Elsewhere, the Philadelphia Free Library was a useful source of many indexes and obscure items; the library at Rutgers University was frequently visited; and the New York Public Library generously provided me with photocopies of obscure publications that were in sadly terrible condition due to the ravages of time and paper full of acids.

Louise M. Hinchliffe, formerly with the Research Library at Grand Canyon, and Dorothy A. House, librarian at the Museum of Northern Arizona, Flagstaff, even early on were willing and able contributors to this bibliography. Without their support in the formative years of this project, I would have been left with many unanswered questions regarding publications that I could not get hold of myself. And it should be pointed out here, parenthetically, that after Louise's retirement the Grand Canyon Research Library was rededicated in her name.

Robert C. Euler has been a constant supporter of my work on the Grand Canyon, contributing faithfully and with unfailing interest. He has added significantly to the primary references of the archaeology and Native American sections, thus I feel justified, with thanks to Bob for his permission, to include him as a co-compiler of those sections.

For pointing me toward a tremendous number of geological references, I am grateful to George H. Billingsley and to the Museum of Northern Arizona for permission to merge their unpublished bibliography of Grand Canyon geology with my own.

The late Edwin D. McKee cordially provided me with answers to many questions and even managed to send me copies of page proofs of his 1982 monograph on the Supai Group so that I could complete the first volume of the annotated bibliography of Grand Canyon geology. Through that kindness he also allowed me to maintain currentness in my informal supplements to the general Grand Canyon bibliography. He rests today in the historic Pioneers Cemetery at Grand Canyon. In 1988, the U.S. Board of Geographic Names passed a proposal submitted to them to name McKee Point, on the rim of the Canyon in the Hualapai Indian Reservation west of Grand Canyon Village.

Over the years, *many* people have benefited this bibliography by providing references and commentary. I wish to express my appreciation to them and to the passers-by who also contributed individual citations. Everyone has helped make this compilation come closer to complete coverage.

I also wish to express my thanks to the boatmen, swampers, and fellow passengers on my first two trips down the Colorado River, in 1989 and 1990. Their knowledge and compan-

ionship reaffirmed by interest in the Canyon, its magnificent river, and the wonderfully interesting people who work and travel there. My first trip was with the 28th International Geological Congress. Running the river with geologists from around the world, conducted by geologists whose combined experience was of a caliber rarely met on trips through the Grand Canyon, and guided by boat crews whose enthusiasm never waned, provided me with some of the most grand impressions I may ever have of the Canyon. I also must thank Marc Smith for allowing me my first opportunity to work on the River—a remarkably fulfilling experience from which I learned much—a trip which incidentally helped me complete this edition of the bibliography. And my thanks also go out to all those who keep the spirit of the Canyon alive, and to those who have cared enough to do something about its problems in the face of sometimes overwhelming odds.

Pam Frazier of the Grand Canyon Natural History Association has been a welcome, friendly voice on the phone during the production phase of this volume. Without her advice and expertise in publication production, this book not only would not look the way it does—nor work as well as it does—but it would not exist. It would be only a manuscript. And special note must be made that the facilities for the production of camera-ready pages for this volume were generously made available by the Department of Malacology of the Academy of Natural Sciences of Philadelphia.

Finally, I wish to thank all the authors who took the time to write introductions to various parts of this bibliography. In contrast to the rather Spartan lists of publications, the introductions provide more refreshing, unique views of the Canyon, its river, its people, its literature, and its history. It was my intention to leave the content of the introductions to each author, thus providing a range of writings as diverse as the contents of this bibliography. But I could not have presented anything of this magnitude without everyone's help. Thank you.

### PREFACE TO SUPPLEMENT 1 [1993]

[includes acknowledgments]

Originally published in *Grand Canyon Natural History Association Monograph 8*, page x-1. (Corrected for inclusion with the Internet Edition and here copied from that edition.)

[Supplement 1 was the only supplement published for what was a loose-leaf production.]

The very fact that this supplement was in preparation before the Grand Canyon Natural History Association even received the camera-ready pages for the first release of this monograph, is a testimonial to two things. First, unfortunately, is the compiler's fallibility. Many

items that should have been found on the first round continue to come to light. Second, the Canyon continues to be described in every format imaginable.

In comment on the first item, readers will note that two new contributors appear on the title-page to this supplement. Both John Irwin and Dan Cassidy have contributed significantly to many parts of this supplement—in particular, the parts on General Works and on Audio-Visual items. John works professionally as a librarian, and Dan is a dedicated collector of printed Canyoniana. They provide an ample illustration that bibliographical compilation has no defined boundaries. It shows that resources can be found not only in the library, bookstore, and so-called special collections, but that the private collector's personal library—truly a special collection—can hold citable treasures. This is precisely equatable to the value of the work of amateurs in paleontology and astronomy, two sciences that lack the pretense of some other fields that reprimand the non-professional for supposing that she or he can make worthwhile contributions.

This shows that the Canyon is bigger than any one compiler, and that the art of bibliographical citation continues headlong into a new era, one in which there are "bibliographical" media that our grandparents, or our parents—or even ourselves in younger years—could not have imagined. Even two or three years ago, when the new edition to the bibliography was being prepared, it was someone shortsighted of me to place audio-visual works within the "Miscellaneous" section. At that time, I was not aware of the huge number of audio-visual works already available even before the advent of videotapes for the home, and compact disks. Indeed, this supplement cites the first compact disk in the bibliography, and I express fear that the use of the word "bibliography" is by now inappropriate or should defer to redefinition. And I wonder, now, what unimagined medium will be available in years to come.

Supplement 1 contains citations that were found through August, 1992. However, this does not indicate that the bibliography is comprehensive to that date. As with the first release of this monograph, the next supplement no doubt will receive its first entry even before these camera-ready pages are in the mail.

I wish to express my thanks to many interested contributors who continue to send citations and photocopies. And I also thank many "passers-by" who, knowing my preoccupation with this project that cannot end, bring single, interesting items to my attention.

Finally, thanks are extended to the Department of Malacology, Academy of Natural Sciences of Philadelphia, for making available the equipment to produce the camera-ready pages for this supplement.

E.E.S. September 1, 1992

#### **ACKNOWLEDGMENTS FROM THE INTERNET EDITION (2000)**

The Internet Edition, an interactive database frequently updated during 2000–2015, was online from January 2000 until 2021 at www.grandcanyonbiblio.org, a domain owned by the Grand Canyon Association/Grand Canyon Conservancy

Accessed 8 January 2025 for the present edition from the Internet Archive Wayback Machine First capture, 12 January 2001, a year after the website was placed online (<a href="https://www.grandcanyonbiblio.org/copyright.htm">https://www.grandcanyonbiblio.org/copyright.htm</a>)

This bibliography, nearly from its beginning, has been the beneficiary of contributors. Without them the product would not be as full as it is now. This is not to mean that the present bibliography is comprehensive. As I note in the introductory material, this is impossible. All that I can hope is to provide the most comprehensive compilation possible, and to keep working at expanding and refining it to meet the needs of future users.

Of course, the earlier editions of the bibliography have contributed directly to the Internet edition, even though the present edition is completely revised and re-edited. So the earlier contributing compilers of these editions must be reacknowledged first: George H. Billingsley, William J. Breed, Daniel F. Cassidy, Robert C. Euler, John Irwin, Grace Keroher, and Valerie Meyer. I also bring the reader's attention to my earlier acknowledgments.

The second edition included invited introductory essays by Robert C. Euler, Louise M. Hinchliffe, Dorothy A. House, Valerie Meyer, Richard Quartaroli, and Lawrence E. Stevens. The Internet edition has benefited directly from large numbers of contributions, comments, and advice from Richard D. Quartaroli and Daniel F. Cassidy, and they are more appropriately acknowledged on the title-page (or opening screen) as contributors.

However, there also are many other people who have contributed single items, or just a few, each of whom has advanced the bibliography. Some of the citations contributed by these interested people were already known to the compilers; most, however, were not, and in fact some of these in turn were from sources which the compilers may never have come upon. And this is precisely how effectual are even the "smallest" of contributors. Over the quarter century that I have been working on this bibliography, some records of contributors have been kept, and some have been lost either through mishap or negligence. By combing my correspondence and miscellaneous notes, as well as my memory, I shall try to list all of the people who have benefited this bibliography. I thank Stewart Aitchison, Jane Anderson, Stanley S. Beus, Arthur E. Bogan, Nancy Brian, Bryan T. Brown, Greer Chesher, Malcolm D. Clark, Jane P. Davidson, Donald P. Elston, John L. (Larry) England, Leonard X. Finegold, Trevor D. Ford, William B. Gallagher, Diane Boyer, Joseph G. Hall, David Hellyer, Richard Hereford, Al Holland, Dorothy A. House, Peter W. Huntoon, Stephen C. Jett, Edwin D. McKee, Jim I. Mead, Dove Menkes, William H. Mullane, Clifford M. Nelson, Gary Rosenberg, W. A. S.

Sarjeant, James Sorauf, Jeff Sorensen, Royal D. Suttkus, Frank Tikalsky, Hugh Torrens, and Ellis L. Yochelson. To you whom I have overlooked I apologize, and I hope that the present product is some tangible reward at least for your kindness.

Librarians have been stalwart, unwitting assistants in the search for publications. While they may not be co-compilers or direct contributors to the bibliography, they have helped track down some of the references that I needed to examine, not always with a complete citation from me. Even in these days when lending institutions balk at the incomplete citation, or query the need to loan a rarer volume, the librarians have always been professionally responsive to the needs of such a large and complicated project such as this. Foremost among them—principally because it has been my host institution since 1973 (though as an employee only for the past 13 years)—is the Academy of Natural Sciences of Philadelphia. Others over the years have been the American Museum of Natural History (New York); the American Philosophical Society (Philadelphia); the Balch Institute for Ethnic Studies (Philadelphia); the Library Company of Philadelphia; the Museum of Northern Arizona (Flagstaff); the New York Public Library; Special Collections and Archives, Cline Library, Northern Arizona University (Flagstaff); the Philadelphia Free Library; Rutgers University (Camden, New Jersey); the libraries of the University of Pennsylvania (Philadelphia); and (once, in a snowstorm) the library of the Bryn Athyn Church, a Swedenborgian denomination in Bryn Athyn, Pennsylvania—and of course last but never least the innumerable lending institutions who participate in interlibrary loan and copying programs.

Compiling a bibliography such as this means far less if it is not distributed for use. Grand Canyon Association (formerly Grand Canyon Natural History Association) has backed the Grand Canyon-Lower Colorado River bibliography for 20 years. They are responsible for the evolution of this product, from a skinny, perfect-bound, plain black paper-wrap book; to a "metallic mauve"(!) loose-leaf binder quickly stuffed with an unexpectedly large "Supplement 1", complemented by copies released also on microfiche and as ASCII-text files on computer diskettes; finally to a wholly paperless electronic version with searching functions. Some 20 years have passed now; those who have participated in the production process of what now is three editions are Pam Frazier, Rose Houk, Lisa Madsen, Faith Marcovecchio, L. Greer Price, T. J. Priehs, and Sandra Scott.

Other Grand Canyon National Park personnel who have provided assistance over the years include John C. O'Brien and Sara Stebbins.

And of course, the Internet edition would have been impossible without the design and conversion expertise of Jeff Kay and Jeff Dillon at Canyon WebWorks (Flagstaff).

Thank you.

E.E.S. December 1999

## ACKNOWLEDGMENTS FROM THE FIRST EDITION OF THE GRAND CANON (2012)

[Edition distributed digitally as a book-layout PDF document on CD-ROM and DVD]

In earlier offerings of this bibliography I acknowledged legions of helpful contributors, librarians, and others who aided and inspired. Even though some of those comments are now more than 30 years old. The Grand Canyon Association must be specially recognized for its commitment to the bibliographical project since 1980. The longevity and the ever-increasing utilitarian worth of this bibliography in the public venue is due wholly to the Association, which made it widely available first in 1981, and in 2000 exported it to the worldwide realm of the Internet. Web-crawling computer programs regularly contribute the content of the Internet Edition of the bibliography to search engines, greatly amplifying the reach of this work. The bibliography contributes to the Association's mission to "benefit Grand Canyon National Park" and to provide "premier educational opportunities about the natural and cultural history of the region". With this work the Association enriches not only the national park but it adds to the resources available to citizens, organizations, and federal and other agencies beyond the national park, within the entire lower Colorado River region in the United States and in Mexico both. And indeed, the Association has made this work available not only to park visitors and administrators but to a worldwide constituency of scholars and Grand Canyon-Colorado River avocationists. A color palate of users has been reached, from notable researchers to youthful generations who have used this work for projects in schools, clubs, and social organizations.

Since 1974, even with the valuable contributions by many others, I have nonetheless flown solo, the content of the bibliography being in the end my responsibility and a voluntary effort. This has had the benefit of there being a single organizer for the bibliography, without the "meddling" of co-editors or following worn-in trackways of previous ones. However, the numerous revisions, and my sinuous learning curve over decades (both for the art of bibliography and the history of the region covered here) reveal themselves in rough spots and inconsistencies in the crafting and organization of citations, despite ongoing editing. My thoughtful and diligent contributors, and the Grand Canyon Association, are not responsible for my indecisions, misdecisions, and occasional bouts of inattention.

I must acknowledge now my debt to several people whom I thank for being in some fashion responsible for more keenly focusing my interests in the bibliography, history, and science of the Grand Canyon and the Colorado River; and indeed also to my interest in the art of bibliography itself. Without these people, this work might have desiccated for lack of attention.

Within the extended Grand Canyon community, I first single out Louise Hinchliffe, now-retired librarian for Grand Canyon National Park, a true librarian as I came to know

them even as a young boy. She dutifully answered every pestering question I had during the early years of this bibliography, then took the initiative to give me even more than I had asked for. The late Dave Hellyer, original proprietor of Five Quail Books, introduced me to new passages in the bibliographical journey through the Southwest, through his catalogues as well as in interesting conversations on the phone and by email. Dan Cassidy followed suit, a Phoenix newspaper printer (now retired to Prescott) who purchased the Five Quail stock and name from Dave. With his wife, Diane, they continue to feed the insatiable bibliographical appetites of a small and dedicated market. Jane Davidson, an art historian with the Department of Art in the University of Nevada at Reno, has for years offered interesting discussions in correspondence and in person about art generally, and points of artistry amongst the special school of Grand Canyon portraitists. And, following the public speaker's tradition of reserving more influential people for last, I thank Richard Quartaroli. "Q" in correspondence and occasional by-line, Richard is a Colorado River historian and nowretired Northern Arizona University special-collections librarian who is, unstereotypically, also a Colorado River boatman. Ours is an acquaintanceship on land and river now in its third decade. He is the one contributor who steadfastly dribbles historical trivia on me and stuffs my mailboxes (postal and electronic) with citations and packages of printed things, which wend their ways into this bibliography and my research collections. I thank him also for contributing his compilation, "Variants of E. L. Kolb's Through the Grand Canyon From Wyoming to Mexico", which he had started while studying for a degree in library science and on which he continues to work as part of larger projects on the Colorado River and the Kolb brothers.

In addition, I must after all these years add thanks to the late Horace G. Richards, long the curator of the former Department of Geology and Paleontology in the Academy of Natural Sciences of Philadelphia<sup>1</sup>, where I was then (in the 1970s) an undergraduate-student volunteer. To him I owe most thanks for having unwittingly inspired a new bibliographer. Dr. Richards was the principal compiler of several volumes of an annotated bibliography on the geology of ancient shorelines of the Quaternary Period worldwide.<sup>2</sup> It was through these volumes that I began to take interest in the concept, scope, and purpose of bibliographies; a reawakening long after my first, disinterested but not repelled introduction to bibliographies in the sixth grade (with a nod of respect to my elementary school librarian, Mrs. Holman). Dr. Richards' annotated bibliographies opened my eyes to the idea that bibliographies can be much more than lists. His volumes provided seminal inspiration and helped attune my bibliographical energies in many fields, and to all kinds of bibliographies. Later, direct encouragement from the late Dr. Edwin D. McKee of the U.S. Geological Survey, legendary Grand Canyon sedimentary and stratigraphic geologist and Grand Canyon naturalist, helped inspire me to compile more than one volume of an annotated bibliography of Grand Canyon geology and similar works of indexing<sup>3</sup>, which were published by the Geological Society of America albeit on microfiche during the short-lived era of microforms enthusiasm before

digitization. I must mention also Dr. William B. Gallagher, a long-time acquaintance, also a student mentored by Dr. Richards, with whom I had worked in study collections and as a geologist and paleontologist in the sands and muck of the east coast Coastal Plain. Bill's enthusiastic, broad-scoped knowledge of both geology and ecology produced energetic discussions and dialogs in the office, home, field and tavern, which opened ways of seeing the world and literature alike that I had not before seen. Herb and Janice Harvis, friends of a colleague of mine in the Academy during the years when I worked there on payroll (1980s-2000s), through a private fund administered by them underwrote my travel expenses to attend a 1994 Geological Society of America Penrose Conference in San Diego—"From the Inside and the Outside: Interdisciplinary Perspectives on the History of the Earth Sciences". It was the first such convocation of geologists who study the history of their science and professional historians who study the geological sciences. One especially significant outlook achieved from the work of this conference was that one may unapologetically embrace both historical and scientific focuses and language in one's work and writing. Ever since, I repeatedly have enthusiastically climbed to this breezy viewpoint, hopefully to good advantage.

I am indebted to dozens more canyon-river professionals and infatuationists with whom I have crossed paths in the field and in correspondence. A rich orchestral score of discussion, trivia, and comments in passing, beachside, trailside and tableside, has fashioned my understanding of the histories, cultures, and sciences of this region—as of course have the thousands of published items cited herein, and thousands more things scattered across the ephemeral web of the Internet that do not appear here—my own Grand Canyon Suite if you will.3

Comments and discussions with my colleagues in libraries, archives, and research collections during the past decades, as well as comments received from users of this bibliography, have provided a constant source of refreshed perspectives and constructive criticism.

Everyone has helped to make this broad and deep canon especially grand—with my continuing thanks.

> E.E.S. 1974-2012

Notes for the 2012 acknowledgements

<sup>&</sup>lt;sup>1</sup> The Academy of Natural Sciences of Philadelphia, founded in 1812, is the oldest continuouslyoperating natural sciences research institution in America. It was in 2011 formally affiliated with Philadelphia's Drexel University, becoming The Academy of Natural Sciences of Drexel University, an independent not-for-profit organization administered by the university. Corporately, however, it remains the Academy of Natural Sciences of Philadelphia.

<sup>&</sup>lt;sup>2</sup> Horace G. Richards and Rhodes W. Fairbridge, Annotated Bibliography of Quaternary Shorelines (1945-1964) (Academy of Natural Sciences of Philadelphia, Special Publication 6, 1965). Horace G.

Richards, with Rhodes W. Fairbridge, *Annotated Bibliography of Quaternary Shorelines; Supplement,* 1965–1969 (Academy of Natural Sciences of Philadelphia, Special Publication 10, 1970). Horace G. Richards, *Annotated Bibliography of Quaternary shorelines; Second Supplement,* 1970-1973 (Academy of Natural Sciences of Philadelphia, Special Publication 11, 1974). Horace G. Richards and Earl A. Shapiro, *Annotated Bibliography of Quaternary Shorelines; Third Supplement,* 1974–1977 (Geo Abstracts, Norwich, 1979) (Geo Abstracts Bibliography no. 5).

<sup>3</sup> Ferde Grofé composed five captivating orchestral movements in *Grand Canyon Suite* (1929–1931), first performed in Chicago on 22 November 1931. The movements are "Sunrise", "Painted Desert", "On the Trail", "Sunset" and "Cloudburst". See "Grofé" in Parts 2 and 27 herein; and see also numerous citations pertaining to Grofé by searching on "Grofé" throughout the bibliography.

# The 2nd, 3rd, and 4th Editions of THE GRAND CANON (2015, 2019, 2022) did not include separate acknowledgments sections

The 2nd Edition was distributed digitally as a book-layout PDF document on CD-ROM and DVD. The 3rd and 4th Editions appeared digitally as book-layout PDFs on the Raven's Perch Media website, <a href="https://ravensperch.org">https://ravensperch.org</a>.

## ACKNOWLEDGMENTS FOR THE FIFTH EDITION OF THE GRAND CANON (2025)

[Edition distributed digitally as book-layout PDF on the Raven's Perch Media website, with a liberal Reproduction and Fair Use statement]

Where to begin!? Fortunately, one may begin with the recited acknowledgments from the previous editions, above. Many individuals continue to help, though I must especially single out yet again Richard Quartaroli, with whom I am in frequent email contact and who still on occasion sends via the Postal Service boxes of accumulated new materials to sort through for the bibliography.

Bit by bit, things have accrued over the past 50 years, while I drifted through library stacks and perused the shelves of book stores new and used, read the catalog offerings of publishers, pestered Interlibrary Loan offices and librarians elsewhere, picked the brains of colleagues and correspondents widely dispersed, and huddled in front of a computer to canvass the world for things I search for. My methods and my online search procedures are generally quite unconventional. Other researchers (and bibliographers) surely would not have the patience because my online search technique is admittedly too eccentric for scholarly credibility. *And this is the result*. Accordingly, I feel that I must point out, before someone raises the issue, that at no time has Artificial Intelligence been used in working on

any of these bibliographies. (I can see potential benefits, but this is beyond my abilities and interests at the present day.) Only online translating websites have been used to assist me in working with the dozens of languages cited in this work. My own education in foreign languages has been limited to French, a little German, and a smattering of Russian; none of which remain satisfactory after so many years since class work, but I greatly enjoy being exposed to languages in general. I thank now-nameless individuals who, over the years, from time to time helped in piecemeal fashion with some of the languages I encountered.

Had I known in advance the thousands of hours of my life that I would devote to this project, I wonder if I would have begun it in the first place. It did begin simply enough—to compile a straightforward bibliography of Grand Canyon geology, in all of its owlishly presented, ordinary detail, and that would be that—but it grew and morphed and renergized itself and me as the decades passed, to be a worldwide bibliography of everything published about the geographically confined region of the Grand Canyon and the Lower Colorado River, dam to sea, including the dams, and a smidge more.

Were it not for the interest of the Grand Canyon Natural History Association in the late 1970s, the bibliography never would have seen the light of day (or computer screens!). The Association likewise grew and morphed over the decades, to the Grand Canyon Association to the current Grand Canyon Conservancy, expanding its mission in eminently successful ways and en route providing for the invention of an interactive online bibliographical database that survived for two decades before outgrowing the technology that drove it. But in the meantime, anticipating the demise of the online database that was encountering technological difficulties, I had re-created and reconstructed the monographic bibliography; this time as a book-layout PDF production. From it numerous specialized bibliographies have been spun to supplement the ponderous, main bibliography that is the core of THE GRAND CANON series. It had the advantage of not only reinstituting the bibliography's monographic presentation that was invisible in the online database, but it now could present more than two dozen non-English orthographies as part of its citations, an aspect of bibliographical precision that was not possible online. And lots more besides.

For the 4th Edition of THE GRAND CANON, to make things more manageable by offloading parts of it, I created the separate *Cartobibliography of the Grand Canyon and Lower Colorado River Regions of the United States and Mexico* as Volume 2. The ancillary section on the worldwide geographical nomenclature and literary uses of the term "Grand Canyon" I made Volume 3, as *Grand Canyon: Colossal Mirror*. Each of these has now evolved again, into newer and more greatly revised editions to complement THE GRAND CANON 5th Edition.

But the *Cartobibliography* did not come into being simply by moving citations around. A great deal of it came about through dedicated research during a worldwide pandemic, which is explained in a portion of the personally reflective <u>Preamble</u> to this 5th Edition,

which I copy in below. It serves as a special acknowledgment of the silent librarians, archivists, and digital products managers around the world whose work made this possible.

I wrote a part of this Preamble during a most unusual time in the world, when the pandemic not so catchingly named COVID-19 swept around us (the name stands for COrona VIrus Disease, also designated "2019 novel coronavirus"). Re-editing of this paragraph was done late in 2021, when even with vaccines Covid was still insidiously with us (due to new variants naturally, but also because of those who are vaccine-hesitant, which is not novel to today's population, and because of partisan politics that is shameful in the realm of public health). THE GRAND CANON does incidentally cite items concerning "plague"—and now, necessarily, "COVID-19".

During the time of most-concerning Covid, with many of the world's places of human congregation shuttered (libraries among them), I had even more industriously devoted my time to travel—via the web! Among my electronic sojourns outside the United States, I went most frequently to France, Spain, and Japan, though I touched down in less likely places, too, like New Zealand and Russia (the latter revealing a scarce 19th century atlas, in Russian, that was an important contribution to the *Cartobibliography* that is now Volume 2 of THE GRAND CANON).

In fact, my virtual travels have gone on for years, in search of resources for this bibliography. Peculiar spots unexpectedly provide information. For example, who knew that across eastern Europe and in Germany are individuals and clubs who are infatuated by cacti, who home in on, and even travel to, places like the Grand Canyon region's more isolated House Rock Valley? Most enjoyably for me during the nervous time of covidity were long forays deep into the Library of Congress and various universities and colleges worldwide, on the hunt for maps. Even some auction houses were providential sources of high-resolution images that were inspected in detail. At my leisure, in retirement and by the euphemistic "social distancing" required by the pandemic, I was able to track down hundreds of citations that I had thought I would never get to-and discovered many more—all because these institutions and firms had had the wherewithal to create highquality digital images of these maps in the first place, post them to their websites, then to have kept their websites up and running during crises of public shutdown. (Thank you, everyone!) I have been fortunate to have seen many of the actual maps I cite—though hardly not as many one might expect or that I would wish to see in person—but the web resources were undeniably invaluable. In fact, as much as I hate to say so, many times there is no need to be present in a library now, in order to obtain answers to some questions—although, in a sense I was in fact in those libraries whose digital reading rooms are accessible. (How does that differ, really, from the days when researchers requested photographic copies with which to work?)

I have ranged over the earth in search of material for THE GRAND CANON. Does it matter that I did not visit libraries and bookstores of other lands myself? I surely have missed out on opportunities for discovery. On the other hand, I would have been limited to these

places' acquisitions programs, restricted to their academic needs, budgets, and (in the case of bookstores) sales potential. So instead, during the more recent years of the five decades I have been working on this project, I have relied on the remarkable resources of the web to locate things to cite. I am never ceased to be amazed—not that so much material is available online (though definitely it is a small fraction of all that must have been produced), but that people have made the effort to put it there in the first place! And in some cases, discoveries made online, which I may never have known about, have led me to acquire items for my own library, which I hope will become someone else's asset.

To reach this point, helpful individuals continue to drift into the scope of this work, providing me with ideas or pointing me to other useful works. One of the newest of my correspondents is Matthew Toro, Director of Maps, Imagery, and Geospatial Services in the Arizona State University's Hayden Library, Map and Geospatial Hub. The online productions he supervises, including hosting a separate conference on "Mapping Grand Canyon", tremendously advanced my understanding of the possibilities of the digital realms of cartography and education, so much so that I wish I were now beginning a career rather than reflecting upon the one that began in the analog world of paper and discovered the new world of digital resources. Indeed, I created a separate chronological cartobibliography, only coincidentally also named *Mapping Grand Canyon*, which now has a 2nd Edition to complement the new bibliographies of 2025 produced by Raven's Perch Media.

The interested membership of the Grand Canyon Historical Society has been helpful, too, though their continual contributions of historical publications, academic and general alike. Without their direct knowing, they have been a modest but motivating force behind the Grand Canyon–Lower Colorado River Bibliography Project.

It is too easy to single out academic and commercial publishers for their influence upon this bibliography's well-rounded coverage. But I must acknowledge the unsigned individuals who are behind privately run publishers, who have similarly been prodding powers in helping to organize the bibliography as it exists today—for example, the cluster of independent publishers based in Flagstaff, Arizona, Fretwater Press, Puma Press, and Vishnu Temple Press, who turn out books primarily of interest to the region.

And this is a good a place as any to introduce to readers who have made it this far the battery of specialized bibliographies and historically focused volumes that are available through Raven's Perch Media. Obtain the latest version of the Raven's Perch publications list at <a href="https://ravensperch.org/publications-list/">https://ravensperch.org/publications-list/</a>, which itemizes publications by title; and the digital PDF embeds for each of them a live URL link by which to download the publication.

All of this has been made possible because of the continuing interest of many far-flung people over the past 50-plus years.

## PRECEDING AND CONTINUING EDITIONS

### HISTORICAL BACKGROUND

THE GRAND CANYON–LOWER COLORADO RIVER BIBLIOGRAPHY appeared first in two inkprint editions (1981 and 1990, with a 1993 supplement) published by the Grand Canyon Natural History Association. The 1990/1993 releases were also produced on microfiche and as digital (text-only ASCII format) files on 5¼-inch diskettes ("floppies").

In January 2000 a greatly revised Internet Edition was posted as a field-searchable database on the website of the (renamed) Grand Canyon Association but under its own domain name (www.grandcanyonbiblio.org), presenting wholly revised work that had been completed in September 1999. Updates to the Internet Edition were made frequently until mid-2015, when technological issues precluded updating the database. It was removed in October 2021.

Preparation of THE GRAND CANON began in 2010. The object was to restore the monographic presentation of the entire bibliography and to incorporate features not present in the Internet Edition, particularly the use of non-Roman orthographies. The first edition of THE GRAND CANON was released in 2012; a second edition in 2015 commemorated the 40th anniversary of the Grand Canyon–Lower Colorado River bibliography project; a third edition, 2019, commemorated the centennial of Grand Canyon National Park and the sesquicentennial of John Wesley Powell's first Colorado River expedition. The fourth edition reflected the transfer of Part 25 to become Volume 2 of THE GRAND CANON, *Cartobibliography of the Grand Canyon and Lower Colorado River Regions*; and what had been an appended document, *Grand Canyon, Colossal Mirror*, is now Volume 3. This fifth edition continues to expand and enlarge the bibliographies and now separates the lengthy Introduction and other front matter (Volume 1, Part A) from the main Bibliography (Volume 1, Part B), which was done to make the volume more user-friendly and to limit the amount of space it occupies in online storage and for file-size downloads.

## Editions of the Grand Canyon-Lower Colorado River Bibliography

[precise titling is shown]

## 1981 Bibliography of the Grand Canyon and the Lower Colorado River, 1540-1980.

Earle E. Spamer, compiler (WITH CONTRIBUTORS George H. Billingsley, William J. Breed, Robert C. Euler, and Grace Keroher)

Grand Canyon, Arizona: Grand Canyon Natural History Association, Monograph 2, 119 pp.

ISBN 0-938216-14-7, Library of Congress Number 81-81457

Arranged in 10 parts. Print format only, paper wraps, perfect-bound.

[See Appendix A to Part 1 in THE GRAND CANON Volume 1/Part B for contents and arrangement of the 1981 edition.]

[The bibliography was begun in September 1974. Later editions are reorganized and reformatted.]

# 1990 **Bibliography of the Grand Canyon and the Lower Colorado River; from 1540. SECOND EDITION.**

Earle E. Spamer, compiler (WITH CONTRIBUTORS George H. Billingsley, William J. Breed, Robert C. Euler, Louise M. Hinchliffe, Dorothy A. House, Grace Keroher, Valerie Meyer, Richard Quartaroli, and Lawrence E. Stevens)

Grand Canyon, Arizona: Grand Canyon Natural History Association, *Monograph 8*, 12 separately paginated sections, with separately paginated front matter, in one volume, [370 pp.]

ISBN 0-938216-37-6, Library of Congress Number 90-82533

Arranged in 12 parts with additional special sections. Distributed in print format (loose-leaf, with binder and separator tabs, 1,000 copies), on microfiche (25 copies), and digitally on five ASCII-format 5.25-inch disks (25 copies). Contributors added introductory essays for parts of the bibliography.

[See Appendix B to Part 1 in THE GRAND CANON Volume 1/Part B for collated pagination sequence and tab placements for this edition and Supplement 1 (1993).]

# 1993 Bibliography of the Grand Canyon and the Lower Colorado River; from 1540. Supplement 1. 1992.

Earle E. Spamer, compiler (WITH Daniel F. Cassidy and John Irwin)

Grand Canyon, Arizona: Grand Canyon Natural History Association, *Monograph 8, Supplement 1*, separately paginated sections [continuing the pagination of parts in 1990 ed.] [174 pp.] [combined 1990/1993 volume 544 pp.]

ISBN 0-938216-47-3, Library of Congress Number 93-70396

Distributed in print format (loose-leaf, 1,000 copies), on microfiche (25 copies), and digitally on two ASCII-format 5.25-inch disks (25 copies). No more supplements produced.

[See Appendix B to Part 1 in THE GRAND CANON Volume 1/Part B for collated pagination sequence and tab placements for 1990 edition and Supplement 1.]

## 2000- A Bibliography of the Grand Canyon and Lower Colorado River. [INTERNET EDITION.]

2021 Earle E. Spamer, compiler and editor (WITH CONTRIBUTORS Richard D. Quartaroli and Daniel F. Cassidy)

Online, www.grandcanyonbiblio.org. Sponsored and hosted by Grand Canyon Association/ Grand Canyon Conservancy, Grand Canyon, Arizona.

Arranged in 34 parts; later reduced by the deletion of two parts. Available online only as a searchable database. First posted January 2000, and continually updated thereafter. Updates ceased June 2015; **website discontinued October 2021**.

[See Appendix C to Part 1 in THE GRAND CANON Volume 1/Part B for contents and arrangement of the Internet Edition.]

[NOTE: Two printed copies of the first state (January 2000) of the Internet Edition were made by Spamer, 1453 pp. One was given to the Special Collections and Archives, Cline Library, Northern Arizona University, Flagstaff (call no. F788.S636 2000); the other is in the author's possession.]

## THE GRAND CANON

#### 2012 The Grand Canon: 1548-2012

A Directory to 48,600 Published Items and New Content On the Grand Canyon and Lower Colorado River Region—Arizona, Nevada, California, Baja California, Sonora—Southwestern United States—Northwestern Mexico.

Earle E. Spamer

Philadelphia: Earle E. Spamer (A Raven's Perch Digital Production)

Digital product—Portable Document Format (PDF) (pagination [1-2], i-l, 1-1826, I-XVIII, 1827-4988, I-XII, 4989-5207.) Digital copy (DVD) filed with U.S. Copyright Office.

Updated bibliographical listing of items published worldwide in 55 languages. Enumerated and cross-listed to previous bibliographies and standard reference lists. Extra features include introduction, commentaries, surveys of comparable works, and a nomenclatural appendix on the term "Grand Canyon" as used in geographical nomenclature, analogy and metaphor. Expanded and improved layout. [The subtitle published-item count will increase as the bibliography grows.]

Monographic version in 32 parts as searchable PDF (Portable Document Format) digital document with hyperlinks. First formal publication on CD-ROM April 2012.

[NOTE: An informal, test release was prepared in February 2011 as the "Comprehensive Edition" and privately distributed on CD-ROM to a few users. It is not one of the sequence of formal editions.]

[NOTE: Two color-printed copies of the non-bibliographical components of the First Edition were produced by Spamer in 2012. One is in his possession; the other is in the possession of Richard D. Quartaroli.]

#### 2015 The Grand Canon: Second Edition: 1542-2014

A Bibliography of 65,000 Published Items in Printed and Other Media About or Including the Grand Canyon and Lower Colorado River Regions — Arizona, Nevada, California, Baja California, Sonora — Southwestern United States—Northwestern Mexico.

Earle E. Spamer

Philadelphia: Raven's Perch

A Raven's Perch Digital Production, Portable Document Format (PDF) (pagination [iv], 6798 pp.) Digital copy (DVD) filed with U.S. Copyright Office.

Updated bibliographical listing of items published worldwide in 65 languages. Enumerated and cross-listed to previous bibliographies and selected standard reference lists. Extra features include introduction and the second edition of the nomenclatural appendix on the term "Grand Canyon" as used in geographical nomenclature, analogy, metaphor and neology. Expanded and improved layout throughout, with added features not available online.

Monographic version in 32 parts as searchable PDF (Portable Document Format) digital document with hyperlinks. Distributed on CD-ROM.

[NOTE: Two color-printed copies of the non-bibliographical components of the Second Edition were produced by Spamer in 2015. One is in his possession; the other is in the possession of Richard D. Quartaroli.]

#### 2019 The Grand Canon

A worldwide bibliography of the Grand Canyon and lower Colorado River regions in the United States and Mexico, 1535–2018: 90,000 categorized and augmented citations for publications from around the world in 95 languages: with extensive background and supporting information

#### **El Gran Canon**

Una bibliografía mundial del regiones del Gran Cañón y bajo Río Colorado en los Estados Unidos y México, 1535-2018 : 90 000 citaciones categorizadas y aumentadas para publicaciones del alrededor del mundo en 95 idiomas : con antecedentes extensivos e información de apoyo : (idioma principal del tomo en inglés)

Earle E. Spamer

Philadelphia: Raven's Perch Media <a href="https://ravensperch.org">https://ravensperch.org</a>

#### **3rd Edition**

A Raven's Perch Digital Production, Portable Document Format (PDF) (pagination 11,724 p.: [I-X], I-XVI, [1-2], A-M, Español A-N, [1-2], i-xiii [xiv], Introduction 1-487 [488], [1-2], Bibliography 1-10,993 [10,994], [1-2], Nomenclatural Appendix 1-163 [164], [1-2])

Digital copy filed electronically with U.S. Copyright Office.

Updated bibliographical listing of items published worldwide in 95 languages. Enumerated and cross-listed to previous bibliographies and selected standard reference lists. Extra features include introduction and the third edition of the nomenclatural appendix on the term "Grand Canyon" as used in geographical nomenclature, analogy, metaphor and neology. Expanded and improved layout throughout, with added features not available online.

Monographic version in 32 parts as searchable PDF (Portable Document Format) digital document with hyperlinks. Distributed on various digital media and accessible online at https://ravensperch.org.

# 2021 Cartobibliography of the Grand Canyon and Lower Colorado River Regions in the United States and Mexico, 1535–2021

An accompaniment to The Grand Canon : A worldwide bibliography of the Grand Canyon and lower Colorado River regions

Earle E. Spamer

Philadelphia: Raven's Perch Media <a href="https://ravensperch.org">https://ravensperch.org</a>

## EXECUTIVE OVERVIEW

THE GRAND CANON is a definitive, wide-ranging bibliography and cartobibliography of published materials about the Grand Canyon and lower Colorado River regions in the United States and Mexico (Arizona, Nevada, California, Baja California, and Sonora). It is the evidentiary record of worldwide interests. These are publications containing observations, statements, reports, proclamations, opinions, and reflections, detailed and cursory alike, from nearly 500 years of official and occupational activities, and avocational and recreational pursuits; components of a capacious history of human affairs. For this geographic area this is a unique, authoritative resource—a canon of general, creative, technical, and administrative publications about, or even just touching upon, the land, the river, and the people there—vital to current users and trustworthy to future generations. It deals with everything from the deep time of earth history to current events and concerns. It is as historically complete as possible, useful to administrators, professionals, affiliates of organizations having special attentions in the region, and to interested individuals. The introductory volume further includes background information on the process and purpose of making and using bibliographies, even in the digital age, which details how this bibliography and cartobibliography was put together during the past half century and how it continues to serve.

This work focuses on broad landscapes along the Colorado River from Glen Canyon Dam to the Gulf of California, diverging for historical, environmental, and geological reasons into the Salton Sea, the Imperial, Mexicali, and Yuma Valleys, and the northernmost gulf. All topics of general and incidental interest, exhaustive study, and administrative concern are included. The *Bibliography*, divided into 32 subject areas, and the complementary *Cartobibliography*, contain 111,000 detailed and augmented citations for items in 115 languages—ample, vital, trifling, and trite alike, created worldwide in the 16th to 21st centuries in countries from Afghanistan to Zimbabwe. It proves an enduring, worldwide engagement with this region. Publications include printed, audio, audio-visual, and photographic works, digital formats, and media for users with vision impairments. These comprise books, serials, reports, pamphlets, maps, films and transparency materials, recordings, Braille, and unusual media. Listings accrue as new works are produced and old ones are recovered from obscurity; an everlasting process.

The many parts of THE GRAND CANON ensure that administrators, scholars, students, and the general community within the American nation and among its Indigenous peoples, and interested parties around the world, retain a permanent documentary record of published ideas and work about the Grand Canyon and Colorado River country. Every cita-

tion in THE GRAND CANON vouches for a creative work, however outstanding or mundane, current or outdated. In detail they demonstrate the innumerable ways in which this region has been touched, even if just a bit, in publications around the world. In sum they document the temporal and geographical embrace commanded by this region.

The bibliography's citations, more than a tenth of which are in languages other than English, characterize centuries of international culture, study, reflections, uses, and administrative and advisory action. Items were created by individuals, institutions, organizations, corporations, and government agencies. They pinpoint resources that may contribute to users' specific inquiries. They are a means to identify, access and assess publications and their content. And they may allow users to gather information for historiographical or administrative analysis. This is, after all, a recipe book for historical studies and for new projects—even now, perhaps, applications to Artificial Intelligence-driven jobs. Individual entities—writers, photographers, artists, organizations, companies, and government agencies whose works are cited here—have been witnesses to, sometimes makers of, history. Users who look into these works may gather together what is needed to move ahead in their own, new work. Thus the bibliography is *legacy and vision*; intriguingly, it is hardly the impression many people have of what is a bibliography.

While various bibliographies and reference lists for the Grand Canyon or the Colorado River had been compiled in the 20th century by individuals and official agencies, their lists were limited to principal and noticeable works. The results contained predictably similar products, albeit with different focuses. As for dates of publication, none of them delved deeper than the 19th century. None were intended to be a truly comprehensive accounting anyway, nor did they embrace the profusion of articles that even then were already in the periodicals. A couple of specialized bibliographies added brief commentary, but their coverage was purposely very selective. None of them cited publications that included only short notes of the river and its grand canyons. The absence of very detailed documentation of *all* published works is remedied by THE GRAND CANON.

## **PURPOSE AND AUDIENCE**

THE GRAND CANON is actually several things. Foremost is the bibliography (now presented as Volume 1/Part B); its subtitle is *A Worldwide Bibliography of the Grand Canyon and Lower Colorado River Regions in the United States and Mexico*. Then there are the introductory remarks and essays (now relegated to Volume 1/Part A), which together offer new generations of researchers insight into the process and craft of bibliography. This material explains how the bibliography is constructed and what it contains; then it continues with essays on the purpose and utility of bibliographies in general, amidst the resources of the digital age.

The idea of a bibliography—after that of its being an accounting of what works have been produced—is to reveal things that people are looking for or might become curious about. It is a place to record everything that was published—and thus idealistically, everything that is known—about the subject it embraces. The main purpose of THE GRAND CANON is to serve as a public collection of information about printed publications, audiovisual works, published digital products, and other, less usual, published media. Within broad guidelines it includes everything that (in whole or in part) pertains to, or mentions in context, the Grand Canyon or the lower Colorado River. And one cannot begin to understand the history of a region, or a field of interest, without first knowing what previous work and resources exist. To address these ideas to specific groups of users:

Librarians and reference professionals: This consolidates everything that has been published (so far as has been found) about this geographic region—every subject, every format and language. This is what patrons may ask about, with more than 111,000 precise and categorized citations to guide you; all is searchable in PDF. In the future a new database might be prepared from the bibliography.

*Historians*: This is a source list of published records, events, observations, objectives, and opinions about a significant portion of the North American Southwest.

*Indigenous peoples*: This is a collection of published materials that relate to your cultures and activies on traditional lands along the Colorado River and in the Grand Canyon region.

*Scientists*: This amasses and details previous work carried out in your field, within this geographic area, whether comprehensive or piecemeal.

Administrators and resource managers: This is a list of publications that have drawn upon the tangible and intellectual resources of lands you oversee, or which can contribute to a broader understanding of how these lands are perceived, experienced, and utilized by national constituents and people worldwide.

*Jurists and politicians*: Many publications not only document the activities of courts and legislatures, but even more embrace reaction, opinion, and petition that relate to legal and political affairs; these conserve the concerns and understanding of official activities by an informed citizenry and special-interest groups.

*Students and teachers*: This is an introduction to what has been published about this part of the Southwest in diverse fields of interest, which inform, of course, but which can inspire new projects and partnerships.

Information technology specialists: The bibliography in its digital format can be used for new explorations into the utility of the information contained in it. I envision applications of what is currently called Artificial Intelligence (AI), by which the raw data of a bibliography might be stretched, dissected, analyzed, and rejiggered to draw out new

presentations and analyses that deliver data in modified ways, for different audiences, or perhaps even in ways not now imaginable (although AI's somewhat knotty debut reveals some untrustworthiness that must be overcome). But in this special case it all has to depend first on that raw source, the bibliography, which challengingly even can convey data through special typographies, not to overlook the mixed use of non-Roman orthographies and citations in dozens of languages. Sometimes citations even are bi- or multilingual. It's not all text-only like in a database; typography and language deliver information, too. Then if there are annotations, these too have to be analyzed in context with the citation. I present these as experiments for AI. I hope people will try it out. More to the point, I hope that people will agree that bibliographies thus are really more than unmoving, unchanging lists and will use that concept to advantage—for uses and people not yet known.

*Casual users*: This holds a browser's collection of visits, happenings, thoughts—anything that may have "meant something" to its author and which may "speak" to you: things to pique your interest and to be led to.

Researchers who are accustomed to having bibliographies among the study and reference tools at their disposal will attest to the inherrent value of THE GRAND CANON for its expansive coverage. However, it also has uses not usually attributed to "dreary" lists of authors, dates and titles. For example, the bibliography can assist with matters of resource management, accountability, and other information needs of managers in federal and state agencies that have oversight in parts of the region covered by the bibliography. Users in a variety of organizations, institutions, and cultural groups who have concerns within the region may find comparable uses for this work.

Administrators and resource managers in the Grand Canyon and lower Colorado River regions have not had an authoritative accounting of publications that are about, or include, work performed within these managers' jurisdictions. They have instead relied on resources in scattered official reports and working papers generated by administrative entities, which contain perfunctory lists of references. But in the publications of nongovernmental and professional organizations, and in the general realms commercial publishers, there is an awesomely broad expansion of observations and opinions that relate to the geographic and thematic areas these managers oversee. These publications range from the casual activities of travelers, to deeply involved scholarly studies and technical reports of professionals, never reported or known to these managers. In fact, most products published about the Grand Canyon and the lower Colorado River are the result of activities of thousands of individuals and organizations who are unrelated to the administrative units that now exercise control in the region. And yet, these authors (and photographers and film producers and musical performers and ...) have produced works that draw upon resources that are under the purview of managers who have not had the means to determine the full scope of these "outside" interests, nor more broadly the wideranging, non-official uses of, and attention to, the areas under their supervision. THE GRAND CANON is a master list of publicly available materials, although some may be scarce and not easily found.

The citations in the bibliography of course list things as the work of individuals, agencies, and organizations. But they further serve to document perceptions and opinions that have been held, what resources have been reported upon, and how widely in time, and where in the world, the publications have been produced. For those who are interested in topical focuses, the bibliography sorts through the publications in distributed fashion, as shown by the Table of Contents. Subsets of citations may be extracted to create specialized lists (see for example the complete Raven's Perch Media publications list, which is continually added to (see at <a href="https://ravensperch.org/">https://ravensperch.org/</a>).

No comparably robust accounting of publications exists that embraces any U.S. National Park Service unit, nor for other federal and state public-lands agencies in this region of the United States and Mexico. With respect to Grand Canyon National Park in particular (as a focused example), the broad resources documented in THE GRAND CANON can position the park in a way to be able to also provide documentary information on behalf of other NPS units, as well as to other governmental agencies, academic institutions, and independent organizations in the U.S. and Mexico; from which related partnerships may develop as well. This may be beyond the charge by which the park functions within the federal hierarchy. But with such a resource it can respond as necessary to expectations of the American citizenry, it can respond to the information needs of agencies, institutions and organizations, and it can hold the advantage of a leadership position in such services among groups that do not have the means to produce such services on their own. Further, it may establish itself in the world community of protected areas as a leader in broad regional, national and international cooperation in the documentation of research resources.

THE GRAND CANON is the greatly enhanced and embellished version of the *Bibliography of the Grand Canyon and Lower Colorado River* that was first published by the Grand Canyon Natural History Association in 1981 (today this is the Grand Canyon Conservancy). The print editions of 1981, 1990, and 1993, and the queryable online database that replaced them during 2000–2021, consistently served Grand Canyon National Park and its constituency through the Conservancy's mission to provide "premier educational opportunities about the natural and cultural history of the region". In so doing it also continues to provide a research tool useful to the park's administrative and interpretive staffs—and as well for the needs of other agencies and organizations elsewhere in its coverage area. This embraces federal, state, and local lands all along the lower Colorado River in the United States and Mexico, offering users in those areas comparable attention to

published resources about their areas, rounding out a robust accounting for publications for the spine of the Southwest.

The bibliography of more than 111,000 citations is also a unique public service. The only comparable work for a broad national park area that ever approached THE GRAND CANON in size and content was the *Greater Yellowstone Bibliography*, an online database containing "over 28,900" citations, sponsored by the University of Wyoming Libraries, which lasted only for a decade or so. The content, structure, means of access, and utility of the Yellowstone production differed greatly from the Grand Canyon bibliography, too; and it was not accessible as a single document. Another similar resource, the "Yellowstone Database" posted to the Washington State University website, was restricted to scientific literature of "about 14,060 references," but after having been static for about a decade it disappeared around 2020.

That THE GRAND CANON includes items from six different centuries, 16th to 21st, testifies to a long play of human affairs. It accounts for work and commentary that has been published, of course, but it goes further by recording citations as precisely and completely as possible. This resolves the kinds of ambiguity that come from mis-citations, foreshortened citations, and various kinds of misunderstood, misquoted, misused, and contrived information. It serves also as a reliable base upon which new, extended, and selective resources can be built.

The bibliography can stand both as resource manager's reference tool and a resource for interpretation and education. It does not figure into Grand Canyon National Park's "Foundation Statement", prepared in 2010, because the bibliography is not a National Park Service product nor is it sponsored by the Park Service. Still, it steps up because from 1980 to 2021 it had been sponsored by the not-for-profit Grand Canyon Conservancy, now "the official philanthropic and collaborative partner of Grand Canyon National Park", cooperating with the park's educational, interpretive, and other outreach programs. Even though GCC no longer is engaged in the production of this bibliography, it stood responsibly and responsively for four decades; and the conservancy continues to benefit from this work in its ongoing mission of support to Grand Canyon National Park, to Native American peoples with long cultural ties to the canyon, and to the international constituency of people who visit and who respect the Grand Canyon and its Colorado River.

The bibliography continually grows and is available to a world community of professionals and avocationists. For all, it documents the quantity and quality of human attention to, and interaction with, the Grand Canyon and lower Colorado River regions. Whereas research directions and individuals' reflections change over time, the mission of THE GRAND CANON is to provide detailed documentation of all existing work — at least so far as has been found. It comprises a source list, arranged thematically, to inform administrators,

academics, and citizens, whether independent workers or representatives of organizations or government agencies.

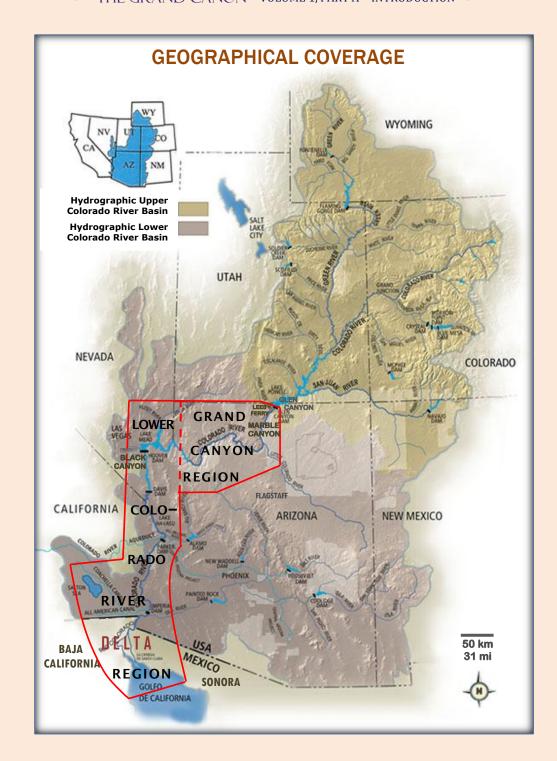

## GEOGRAPHICAL COVERAGE

The ITEMS listed in THE GRAND CANON cover two separate regions (see map on next page). First is the physiographic Grand Canyon of the Colorado River that covers some 2,400 square miles, to which is added extensive adjacent lands. The second geographical region is the area bounding the lower Colorado River from the mouth of the Grand Canyon (where the Colorado River passes through the Grand Wash Cliffs) and the lower ends of the Virgin and Muddy River basins, to the sea. The river corridor-proper in the area covered by this work passes along some 800 miles—beginning in Glen Canyon below Glen Canyon Dam, through the lengths of Marble and Grand Canyons, then drifting through several damimpounded lakes that straddle the boundaries of Arizona, Nevada and California. The river finally trickles to the sea in the delta—now virtually, often absolutely, dry—in the Gulf of California astride the Baja California–Sonora boundary in Mexico. There is a great human and ecological story here, still unfolding. And geologically, the lower Colorado River region and the extended delta with the ancestral head of the gulf offer solutions and show new mysteries both, regarding the origin of the Grand Canyon upstream and even the Colorado Plateau at large. It is, after all, one river.

The Colorado River country witnesses human heritages that arose and continue through understanding and participating in life in this land. The river runs through the physical land, bringing life, death, and rebirth in absolute, inspirational and spiritual ways. It clenches histories to be discovered and renewed, and it seems to withold answers as well. So likewise the bibliography: looking at all of this land, and the life, places and things therein, it chronicles the work of thousands who have told us what can be understood and imagined, and uncovered ideas of what may never be known.

### BREADTH OF ADMINISTRATIVE OVERSIGHT

A SIGNIFICANT portion of the Grand Canyon and the lower Colorado River corridor is administratively overseen by federal and state government agencies of the United States and Mexico, and by the autonomous governments of Indigenous peoples. Accordingly, THE GRAND CANON may aid these and other groups with its unique accounting of published research and reference materials that are available specifically about this region. And perhaps even more importantly, it serves as a documentary record, international in scope, of the work done on, and detailing the perspectives held of, the lands, waters, airspaces, resources, and human needs that are administered or protected by these agencies. A bibliography such as this one thus can serve both a widely interested audience and function as an informational guidance document for resource managers and administrative

professionals; and it feasibly can be used as a summary document for matters of legislative action and judicial opinion.

Administrative units with oversight of lands in the Grand Canyon–lower Colorado River region fall within different departments of the governments of the United States, Mexico, and Indigenous peoples. They can be noted in summary order as one passes through the geographical range of this work from the Arizona–Utah boundary to Mexico; and together they demonstrate the interlocking political and cultural characteristics of the region.

The principal administrative units represented are Glen Canyon National Recreation Area; Grand Canyon National Park; Vermilion Cliffs, Grand Canyon–Parashant, Baaj Nwaavjo I'tah Kukveni–Ancestral Footprints of the Grand Canyon, and Gold Butte National Monuments (which monuments also are in the Bureau of Land Management's National Landscape Conservation System); Lake Mead National Recreation Area; Kaibab National Forest (portions of which are north and south of the national park); plus lands and facilities administered by the Bureau of Reclamation, Bureau of Land Management, Bureau of Indian Affairs, federal and state wildlife refuges and environmental reserves, and Mexican national interests—and throughout there are the sovereign lands, agencies and interests of groups of Indigenous Americans. Segregated areas apportioned as Wilderness are also administered by the Bureau of Land Management, Fish and Wildlife Service, Forest Service, and National Park Service. These are congressionally reserved lands limiting human activities to scientific or historical study and non-mechanized recreation.

Near to the Grand Canyon is the formally established Little Colorado River Navajo Tribal Park and the Marble Canyon Navajo Tribal Park, both in the Navajo Nation that abuts the eastern end of the physiographic Grand Canyon. In the western portion of the Grand Canyon the expansive Hualapai Indian Reservation occupies the southern side of the canyon. While the Hualapai Tribe has not designated tribal park areas, they do operate a commercial tourist enterprise generally known as Grand Canyon West, a name that has since given this part of the Grand Canyon separate, *de facto* geographical status. In the central Grand Canyon area on the south side the Havasupai Tribe has their own tourism-focused enterprise in Havasu Canyon around the village of Supai.

On the Kaibab Plateau north of the canyon the Kaibab Squirrel National Natural Landmark spans the boundary between Grand Canyon National Park and the Kaibab National Forest. The U.S. Federal Highway Administration's ceremoniously designated Kaibab Plateau–North Rim Parkway (Arizona Route 67), a National Scenic Byway, guides travelers through a cultural and ecological scenery of significance along the way to the tourist destination of North Rim on the brink of Grand Canyon.

Along the lower Colorado River specially designated areas now include the Avi Kwa Ame National Monument, Nevada (designated March 2023) and the Chuckwalla Mountains National Monument (designated January 2025).

The region embraced by THE GRAND CANON also includes federally designated natural and wilderness areas and, along the lower Colorado River, wildlife refuges, including those of the Salton Sea area in California. In Mexico there is the Upper Gulf of California–Colorado River Delta Biosphere Reserve (*Reserva de la Biosfera Alto Golfo de* 

California y Delta del Río Colorado); and the Pinacate–Gran Desierto de Alta Biosphere Reserve (Reserva de la Biosfera del Pinacate y Gran Desierto) encroaches on the area covered by THE GRAND CANON. To all these add the stakes of state agencies in Arizona, Nevada, California, Baja California, and Sonora, and local agencies in every city, town, and community of the area; as well as the rights accorded to commercial enterprises of all kinds and private-property owners. Then to apply a broader oversight to all, add the legislative and judicial branches of governments that influence activities, holdings, and accountability, ranging from international treaties to federal and state regulations and local ordinances.

Much of the physiographic Grand Canyon is overseen by the U.S. Department of the Interior, particularly the National Park Service. But the broader region covered by the bibliography includes a conglomerate of federal departments and agencies that have oversight in adjacent lands, waters, and airspaces. These include, but are by no means limited to, such diversely different agencies as the Bureau of Land Management, the Bureau of Indian Affairs, the Fish and Wildlife Service, the Federal Aviation Administration, and the U.S. Coast Guard. In addition, areas are overseen by state and local agencies, the people and governing bodies of Native American tribes, and various not-for-profit and for-profit organizations. Some areas are private inholdings like ranches, mines, and tourist enterprises. A few properties have been turned over to federal jurisdiction or given to the care of not-for-profit organizations. Incidental events in these regions also are overseen by federal agencies, such as National Transportation Safety Board investigations of air and ground transportation accidents.

Eleven federally recognized Native American tribes have historical and cultural connections with the Grand Canyon. The administration at Grand Canyon National Park in particular, as well as those of adjacent national monuments and national forests, hold formal inter-governmental consultations with them and have executed with tribes individual agreements that pertain to land and resource uses and protections on the federal lands. Intertribal cultural studies of these lands have also been made, and educational institutions have implemented cultural- and resource-studies programs with these peoples. These tribal groups (as defined by the federal government) are:

Havasupai Tribe, Havasupai Reservation (Arizona)

Hopi Tribe (Arizona)

Hualapai Indian Tribe, Hualapai Reservation (Arizona)

Kaibab Band of Paiute Indians, Kaibab Indian Reservation (Arizona)

Las Vegas Band of Paiute Indians, Las Vegas Indian Colony (Nevada)

Moapa Band of Paiute Indians, Moapa River Indian Reservation (Nevada)

Navajo Nation (Arizona, New Mexico and Utah)

Paiute Indian Tribe of Utah

Cedar Band of Paiutes, Kanosh Band of Paiutes, Koosharem Band of Paiutes, Indian Peaks Band of Paiutes, and Shivwits Band of Paiutes

San Juan Southern Paiute Tribe (Arizona)

The Pueblo of Zuni, Zuni Reservation (New Mexico)

Yavapai-Apache Nation, Camp Verde Indian Reservation (Arizona)

Within the lower Colorado River region (as defined by the geographical bounds of this bibliography) there are Indigenous peoples who have traditional and legislatively administered lands in the U.S. and Mexico, whose histories and unique cultural heritages are integrated with the greater Southwest. These groups and their reserved lands are:

Moapa River Indian Tribe, Moapa River Indian Reservation (Nevada)

Fort Mojave Indian Tribe, Fort Mojave Indian Reservation (Arizona, California and Nevada)

Colorado River Indian Tribes (Chemehuevi, Hopi, Mohave, and Navajo), Colorado River Indian Reservation (Arizona and California)

Chemehuevi Indian Tribe of the Chemehuevi Reservation (California)

Quechan Indian Tribe, Fort Yuma Indian Reservation (Arizona and California)

Cocopah Indian Tribe, Cocopah Indian Reservation (Arizona)

Cabazon Band of Mission Indians, Cabazon Reservation (California)

Torres Martinez Desert Cahuilla Indians, Torres Martinez Reservation (California)

Cucapá (or Cocopa, *Xawill kwnchawaay*) (Baja California, México; traditional lands in the Río Colorado delta)

In addition, bands of the Southern Paiute people have traditional-use ranges within the northern part of the lower Colorado River region

The apportionment and use of waters of the Colorado River is the result of a complex arbitrative, legislative and judicial history of regulation and responsibilities among the seven U.S. states within the Colorado River basin—Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming—and through treaties ratified by the legislative bodies of the United States and Mexico and agreements of the U.S.–Mexico International Boundary and Water Commission. Supply and distribution concerns, and water-usage variances, go back more than a century, but which were first formalized nationally in the Colorado River Compact of 1922, which remains the foundational document of the generally called "Law of the River," the domestic guidance among the seven cosigning U.S. states.

National and international responses to natural and human-caused changes in water supply, water quality, and overall environmental conditions, have also dramatically affected interstate and international relations, beginning with devastating breakouts of the Colorado River after the turn to the 20th century, the result of failed headgates, which allowed the river to flow unimpeded to the ancient lakebed of the Salton Sink. This came on the heels of a smaller, natural breakout that had occurred in the early 1890s. The floods poured into the basin below sea level, now called the Salton Sea, where a geological history of river outbreaks is recorded by extensive salt flats, raised beaches, and archaeological occupancy sites. Since then, the means of water usage within the United States' portion of the Colorado River basin has resulted in increases of salts and pollutants from irrigation

waters taken from and redrained to the river, so Mexico receives a far more brackish content of river water in greatly diminished flows. The desiccation of the Colorado River delta affects human cultures and the natural habitats of animals and plants. Citizen concerns have, in some small measure successfully, campaigned to Colorado River basin inholders and managers to delegate some water, so-called "pulse flows", for delivery into the delta, to help restore natural habitats and to aid the traditional lifestyles of Indigenous peoples. Now, too, we begin to face physical, economic and culturally debilitating, and politically challenging, effects of a natural return to more usual climatic conditions of protracted drought throughout the Southwest—nature knows nothing of negotiated, legislated, and adjudicated schemes of water apportionment. This will affect the Grand Canyon, too, through the impacts—biological, geological, cultural, and economic—that will come through modifications of river flows and reservoir containments and through natural impacts on atmospheric and groundwater hydrology.

### CONCLUSION

CITATIONS continue to be added to THE GRAND CANON — new publications, naturally, but also items produced years ago that are recovered from obscurity. It is work never finished.

This is also a documentary project, one which cannot predict what items in it will be of interest or of use to any user, today or a century from now (and more). The burden of determining what is useful resides with the user; it is they who will identify the material that needs to be examined further or used to build yet another, perhaps broader, project. Without a guide (such as this one and complementary works produced from it) to resources in the first place users would not know about all what has been produced. It is one thing for one to to filter out what is at the moment unessential, but quite another to work without knowing of potentially pertinent material. THE GRAND CANON is not just a listing of separate items that can be placed on a shelf; it accounts for all products that can be credited to discrete authors. This is a compendium equally for the crowds as it is for the few and the future.

A library containing everything cited in THE GRAND CANON would be compendious to say the least, and this bibliography is in fact a guide toward fashioning that library. Within the things that are cited is the elemental history of the Grand Canyon and lower Colorado River regions—descriptions, analyses, and postulations ready for present and future generations. Without the library—without the bibliography—answers could still be obtained, but with considerable effort, with no guarantee that the same depth of coverage would be realized.

So, the object of this bibliography is to indicate what was done—what is available for examination. As is the case of any reference work, the bibliography comprises informational assets: it respects and gathers referable resources that hold the "collective"

memory" of the subjects and geographic areas it embraces. Some titles cited in the bibliography are in scarce numbers; they will be difficult to locate if one needs to see a copy (if it is not accessible digitally through web-based resources, although some reproductions there may be imperfect). Nevertheless, THE GRAND CANON does provide a total accounting, regardless of rarity or convenience of access, regardless of whether an item is like a tweet or a tome. This is, item by item, a definitive listing for academics, administrators, and general users, for any reasons they may have to use it. And THE GRAND CANON's introductory material and commentaries inform new generations about the process and utility of bibliographies in general.

Last—and importantly—THE GRAND CANON is a journey, not an exhibition. It can be used to great effect by newcomers to the vast field of information about the Grand Canyon and lower Colorado River regions. Resource managers and administrators may use this as an introduction to the published works that have been produced for the lands they oversee. New historians and other scholars in various fields of study are likely to find their forays into the bibliography informative. By browsing, they may be introduced to the documentary evidence for how staggering is the worldwide notice of this region, over centuries, and how much promise there is for further investigation. A bibliography like this is first a guide to history: previous interests, research, opinion, criticism, commentary, and even passing thoughts; a body of literature that conserves a narrative of themes and a chronology of changing attentions over time. One then may also seize ideas of things that are problematical, or discern things that seem not to have been pursued or have not been adequately explored. Even those who are well versed in the subjects covered by the bibliography may do well to browse, too. This record of what has been done can yet inspire new projects and partnerships.

## **Naming the Grand Canyon**

The origin of the name "Grand Canyon" is unknown. It was not the neological invention of John Wesley Powell in 1869, as is often retold. Earlier in the 19th century it was known as "Big Canyon" and "Great Canyon," perhaps the translation of the term by which French-speaking mountain men may have described it—un grand cañon. Both appellations inattentively survived the coming of "Grand Canyon," but only for a couple of decades. The earliest known non-Indigenous term, Puerto de Bucareli, was conferred in the diary of the Franciscan friar Francisco Garcés when he visited the Havasupai people in 1776, the first non-Native person known to have reached the Grand Canyon since a party of Spanish conquistadores arrived on the rim 236 years earlier, in 1540 (who are not recorded as having given it a name). Ingenious misspellings of the puerto appeared on manuscript and printed maps in the 18th and 19th centuries but its association as Garcés's mountain pass for the Colorado River was never remembered, nor did it label an entire canyon. The origins for each "Canyon" name, though, remain mysteries, including the first known appearance of "Grand Canyon" in 1857 that disappointingly lacked an admission of neologism or credit to another source. This has not dissuaded travelers and writers from exploiting the name for other landscapes around the world or from exercising it in a superfluity of analogies and metaphors. In the end, an answer to the question, "Who named the Grand Canyon?" may be unessential, given that Native peoples have had words from time immemorial that affirm long spiritual and cultural associations with the canyon.

Naming the Grand Canyon, by Earle E. Spamer (Raven's Perch Media, 2024)

## PREAMBLE (or, READ ME) 1

". . . [a compilation], being the result of the judgment of one man, cannot be expected to satisfy the judgment of every other man; but [this] Compiler has always worked on this principle: to insert not only those references which he himself considered to be of consequence, but also to insert those which he thought it possible for anyone else to consider of consequence."

John Faulkner Potts<sup>2</sup>
 Swedenborg Concordance
 (The Swedenborg Society, London, 1888), Volume 1, p. ix

ANON affords that which is essential guidance, counsel, or support; one definitive or recognized for its authority. It's a shame that ecclesiastical communities have so elevated the word "canon" that it's really difficult now to appreciate its variant meanings. In this personal excursion in time and places I promote *canon*'s other-worldly connotations, even if they are pedestrian compared to canons of scripture and clerics.

THE GRAND CANON contains things that a particular user can view as consequential for, or of interest to, work at hand. Within the framework of the subject-specific parts of the bibliography there are occasional items cited that *are* canonical, in that they are recognized contributions to historiographical thought or scientific impact, or are respected for their cultural or spiritual human guidance. THE GRAND CANON is a canon by its exhaustive inclusiveness; for the geographical region that it embraces there is nothing comparable. Reflecting upon the quotation above, I have no particular point of view to advance, beyond that it is paramountly important for one to to be *apprised* of available resources. It is not beneficial for I to selectively withhold some items from those who, unbeknownst to me, *could* make use of them.

One may wonder where all this comes from. As long as people are born, there is the answer! We each of us is an individual. We have ideas and perspectives; we have livelihoods and avocations. We learn, we adapt, we communicate, and every one of us will have

<sup>&</sup>lt;sup>1</sup> As a "Preamble" these are some personal reflections to introduce this book-like volume; as a "Read Me" file, it is meant to catch the attention of users who are most familiar with productions of the digital era although it is of the "long-read" genre suitable to print media.

<sup>&</sup>lt;sup>2</sup> I declare a personal bias in selecting this quotation: John Faulkner Potts (1838–1923) was the father-in-law of one of my great-uncles, Gilbert Haven Smith (1882–1958).

something to say about it; something different in view, in thought, and in offering, whether as the result of employment or educational pursuit, or as a matter of personal reflection and commentary. The succession continues, generation after generation. THE GRAND CANON testifies to this; it assembles in one place as much as could be found (so far) on the subjects it embraces, limited to one geographical area. These things were created by thousands of people.

If one waits for a bibliography containing only "essential" items to be offered, one awaits a selective bibliography, which will have been the product of someone else's biased evaluation of essentiality among the chosen items. A few such products exist for the regions studied here, but they are outdated now, having been published in the last century. Assuredly, in the meantime many essential works have been produced. But selective bibliographies do not anticipate many users' specialized interests and needs, so the user remains oblivious to many things that still could be of interest. It is the purpose of THE GRAND CANON to find as much as possible, not to dismiss subjectively inconsequential things. I object to treating as "superfluous" the hundreds, if not thousands, of less "essential" items recorded among these citations; not everyone can agree on the distinction between the "essential" and the "superfluous". If the resulting comprehensiveness of the bibliography repels some users by the sheer number of things captured, then I have to assume those users do await a product that is customized to their particular needs. But must the user have to rely on a selection that is not their own? If instead a user carves a customized, selective bibliography from this one, needs will be met by THE GRAND CANON'S exhaustive coverage. I recognize that such work takes time. So has this one.

This is really "A Bibliography of the Lower Colorado River Region". It embraces everything of the river country between the Utah–Arizona boundary and the sea; the Grand Canyon is a part of it. But if I had titled it as a Lower Colorado River bibliography, it would not have much attention to it on a shelf, or in writers' citations—witness Richard Yates and Mary Marshall's *The Lower Colorado River: A Bibliography* (Arizona Western College Press, 1974), comprehensively useful, yet geographically less attractive. But *The Grand Canyon* is known around the world, a profoundly effective inspiration. People write profusely about their travels to see it; some create their impressions in works of art, visually, musically, and in performances of bodies in motion. They present it in works of fact and fiction. They visit from the six principally inhabited continents. Why, they even produce these things if they have *not* been to the canyon! Moreover, people have named or compared hundreds of other places to it, around the world and on other bodies in space; and they have used the canyon as a unit of measure and as a universally recognizable concept in crafting analogies and metaphors. Few places in the world have a comparably strong and insistent hold on the human imagination and infatuation. So this has to stand out as "A Worldwide Bibliography

of the Grand Canyon and the Lower Colorado River Regions in the United States and Mexico", because after all, *The Grand Canyon* catches the user's attention!

Users who are interested *only* in the Grand Canyon will be frustrated by the inclusion of thousands of items that are about the lower Colorado River region downstream from the canyon, the Salton Sea and Imperial and Mexicali Valleys, and the upper Gulf of California. On the other hand, those who are focused on the Colorado River delta region may be delighted to discover this bibliography, but they are bound to be disappointed by the inclusion of thousands of items about the Grand Canyon and its environs. I admit that even though these areas are historically, culturally, geologically, and geographically entwined, all users of the bibliography are not expected to be so engaged. It is the rare bibliography that is so concise that it will satisfy all of its users. This one, though, is a *historical* bibliography because it will provide information to a great *variety* of users (see the bibliography's separate table of contents in THE GRAND CANON Volume 1/Part B). It strives to be the record of (wishfully) every publication that is about or includes notice of all or parts of this geographical region and the array of human activities there. Those among the "disappointed" of the topical users can ignore the parts that do not relate to their interests. But for those interested in it all, here it all is.

Beyond the bibliography-proper, essays accompanying THE GRAND CANON present information about conventional bibliographies and their good uses even in today's world of digital resources, in addition to documenting how of this one was conceived and how it evolved. And so by this, I think all bibliographies should be read. They are useful tools, as expected; good for look-ups and for gathering statistics; and they are historical storehouses of resources that follow the evolution and progress of the subjects they embrace. Every person who is new to the things about, and to studies of, the Grand Canyon–Lower Colorado River country would do well to start to peruse the bibliography as an introduction to the *kinds* of things that are already available, and to take into consideration the notes and comments that appear with many citations. Of course this means "reading"—not the jump-in and -out activity of look-ups, but reading for comprehension.

But really, to read? Read on!

•

A BIBLIOGRAPHY IS AN ADVENTURE. It consolidates works that relate to a single subject or purpose. It shouldn't be likened to the mixed-purpose list that appears at the end of many publications—unfortunately also called a bibliography—that really is a list of references consulted by the author; some of them may have no direct bearing on the theme of the author's publication.

My basic premise is that a bibliography can be *reading material*. It can be read for its historical perspective, to gain a broad awareness of what has been done, and the contexts of when, where, and by whom those productions have been created, and the sorts of things they are. If a bibliography also contains additional notes or commentary—separately or appended to individual citations—all the better. And indeed, how *does* one "read" a bibliography? Not so much as one would read a story, following the thoughts of paragraph after paragraph. Instead, it is read as paragraphs (citations) by themselves, each to be dismissed or acknowledged as useful or interesting; yet, as with conventional reading, with some anticipation for what may come. All the while, one does begin to grasp the idea that there is a lot of information that is beyond the simple list of authors, dates, and publishers.

As generally expected, a bibliography is consulted to find specific things. Publications can be discovered, too; things that may never have been found except by reading a bibliography. These discoveries can offer unexpected perspectives of, and contribute new information for, one's work; and further, other things might lead to new ideas for different work. My perspective on this may seem to be pedestrian, yet I have been offered these very opportunities in my own work over decades as a professional in museum collections, libraries, and archives. I have also witnessed the same avenues of discovery while working side by side with researchers, especially younger ones who are embarking on careers; and I have learned from their discoveries as well.

As a matter of necessity, THE GRAND CANON is a set of hybrid publications, three volumes in searchable PDF. Even the form of this Preamble anticipates the two kinds of readers this series will reach: those who are more comfortable with books (thus this is the "Preamble") and those who are most familiar now with digital files (thus this is a "Read Me" file). And to all, "read me" is also an appeal.

Effectively, THE GRAND CANON is now far too large to economically produce in a hardcopy format, at least without sacrificing some digitally embedded features that have been inserted to make it more easily used. Still, it is designed to appear more or less like a conventional book, for the very reason that it is meant to be read in this format. In this way it exposes all of its contiguous information in a familiar layout, not distracted by frames or sidetracked by other devices through which many strictly digital productions are engaged. This is presented in a way that, in some places, it is best viewed as odd- and even-numbered pages, side-by-side like a conventional book. Yet, I concede that many digital users will only view a page at a time, whether by choice or a technological limitation, so some pages display "continued" notes or specific language that refers to a previous or following page. And numerous hyperlinks redirect the reader to other parts of the volume

and to external sources. Of course, these directional devices would not necessarily appear in a "real" book (except that, in much older books, it once was customary to include a catchword as a prompt at the bottom of the page being read, which presented the first word or syllable of the following page).

Were this an inkprint product, its thousands of pages—plus another thousand-plus in Volume 2, the *Cartobibliography*—would have to be spread across multiple volumes, which might seem to be a terrible waste of paper and materials. These are moot points in the digital environment. So THE GRAND CANON employs a font size and various typographical elements that are meant to allow easier reading and browsing. It is designed to be more relaxing than the tedious, often myopic formats of most bibliographies that seem to warn that they are not to be "read", just used for brief amounts of time. And, not being a huge inkprint product allows it to be distributed without cost. Even though a few people might even be willing to pay for a comfortable, shelf-resident, encyclopedic offering (I admit, I would like to have a copy, too), the cost of such a thing might require a Grand Canyon-deep wallet.

While even a multivolume bibliography might be welcomed by users who are more comfortable with hardcopy, THE GRAND CANON is more exceptionally useful as a single document, book-like in appearance, that encourages the use of its digital enhancements. Users have the ability to search within it, and the many embedded hyperlinks enable precise, instantaneous migration to different places within the document and to external sources. This would not be possible in an inkprint product. However, I do recognize that it is a step backward from being an online queryable database (a medium, though, which disadvantageously does not allow users to appreciate the whole). Regardless, the book medium still commands in this era of digital awareness and resources; and to top it off, bibliographies are viable and valuable even amidst the electronic clamor around us—see herein my essay, "A necessary nuisance"—The Traditional Bibliography in the Digital Age.

The entire Grand Canyon–Lower Colorado River bibliography project has been conducted for nearly a half century, on the cusp of analog and digital ways of doing bibliographical research. During this time the digital world inexorably closed in on me. I transitioned from index cards and typescripts to productions that were made as so-called "camera-ready copy" (for offset printing), and then to wholly digital products. I learned software of all sorts—much of which became obsolete in short order—and with them I first crafted publications that went away to be born in paper format. In due course, publications were produced, from concept to release, entirely in digital formats. "Born digital" documents became a normal thing, though not so normal that they dis- or re-placed the world of print, as their loudest adherents promised would happen. Many publications are

concurrently available in hardcopy and in digital format (often PDF, such as this one, from which, pointedly, print copies can be produced). True, the means by which publications are produced and disseminated has changed—epicly—over the centuries, particularly in the past few decades; and they will change more in coming decades and centuries. Still, they all have to be *read*.

•

BUT DIGITAL IS TENUOUS. Whereas the world of ink survives from centuries past, the uncertainty of continued access to digital products centuries hence is unknowable. Today's web-based resources could comprise a digital Alexandria, a shuddering prospect. So THE GRAND CANON, because of its sheer size that demands a digital presence, has a shaky foothold on longevity. I hope that it can eventually survive somewhere, if not in print then in a medium for permanent legacies not now imagined, some insurance against a digital shipwreck. Is it "worthy" enough for that? It's not great literature, nor is it a significant work of historiography. But it is a consolidated, historical record of all works—as many as which could be found—for a pretty remarkable and celebrated part of the world. I am struck by the persistence of writers and artists who use the Grand Canyon and the Colorado River as mighty examples of inspiration even when they do not write about the places themselves, or for that matter even if they have never been there themselves. I think this broadly happens more often for the Grand Canyon than for other inspirational or wondrous places; the Himalayas or the South Pole for example. And that most of the bibliography logs inkprint resources, spanning nearly five centuries, which all are accessible somewhere, is testimony enough that ink commands even in the digital world.

Ink is history, an undercurrent of the human experience. In our American nation, it ranges from the silver inkwell in the Signers' room of America's "Independence Hall" (in colonial times it was the Pennsylvania State House) to the modern megaprinter of Washington, the Government Printing Office. Our legacy is ink. The cornerstones of this nation are colonial and antebellum newspapers that incongruously advertised, side by side, choice imported goods, taverns, and enslaved humans, and reported the latest news (as up to date as the speeds of wagons and ships allowed). There were alongside them courageous printers who squeezed off pamphlets of political or social agitation and abolition. Yet this is but one nation, one legacy of ink.

Humankind's intellectual and historical inheritance, through books and records from even long before the time of the American nation, is also in ink and paint, as is the inheritance of most every nation except the most ancient. This was made most immediately possible by Johannes Gutenberg's introduction to Europe of movable type in the 1450s, which reliably assured *multiple, easily produced, identical copies* of text. (Unknown to

Europe, earthenware movable type had already been used in China in the 11th century, and metal and wooden movable types in Korea and China, respectively, in the 13th century.) And by the middle of the 19th century, truly prodigious numbers of identical texts were made possible by the massive steam presses that began to roll out miles of newsprint and sheets of book pages ready for folding and cutting.

Before Gutenberg and his 15th century adherents in Europe, things were written and copied by hand (though in limited instances some were laboriously carved in wood blocks, then printed in limited numbers with ink). The reliability of exact copies sometimes faltered, as scribes fatigued, lost their places or patience, or unadvisedly practiced editing. Still, for centuries it has been the flow of ink that has best preserved the records and ideas of individuals and states alike. Only today's world of the web and digital resources has freed us from the monopoly of ink-though we do, at will, rouse these documents from their electric sarcophagi with ink and paper. Still, everything is tenuous. Paper and ink burn; their products can be destroyed in numerous other ways. Digital products succumb to the vanishing of the hardware and software with which they were used. Online presences can perish at the press of a button or rendered invisible by the absence of electricity. All of the above can vanish by the malign intents of individuals, too, whether by fiat or criminality. And, even just a few decades now into the digital era we rarely consider what likely has already been lost from its midst. Frighteningly, we have not yet experienced in the digital world the kinds of onslaughts such as those in history that have destroyed entire libraries; one can only imagine the calamity arising from the same in the digital universe.

A bibliography is predominantly a record of ink. In this one, THE GRAND CANON, fewer than two percent of the citations list products that are not in ink—films, audio materials, or selected items that are digitally available on disk. Even so, many of those products came in containers printed with ink. Looking back over the centuries of citations recorded here accentuates the fact that, despite the marvelous ways by which we interact with digital productions today (even digital representatives of inkprint originals) our experiences are *still* effectively shaped by ink. It is ink's legacy that pours into a bibliography. Therein is recorded things that are available, for better or worse, in multiple, identical copies. Precise and complete citations, better with informative notations, offer up the information that makes it possible to find these items. Poignantly, THE GRAND CANON, for economic reasons, is produced digitally because of its tremendous size; and further, it can be digitally searched and copied. It is nevertheless meant to serve like a book—and, so designed, we may be heartened that digital searching within it is very conveniently unbooklike. It is also for browsing and reading, really, as you will see. It can be quickly printed from, too, preserving the same appearance with uniquely citeable (and relocatable) pages.

THE GRAND CANON DOCUMENTS the world's heritage enfolded in the Grand Canyon and along the Colorado River, as conveyed though publication. It verifies, as should any bibliography, the works of others and communicates enough information about those works so that they can be obtained or informatively cited. While THE GRAND CANON is constrained by physical geography, these bounds contain a very special historical record of human activities and behaviors; Indigenous, colonial, immigrational, and transient alike. THE GRAND CANON will attract two principal groups of users: a) professionals, administrative persons, and individuals who gather information from this work as a part of their studies or professional activities; and b) browsers, who by entrance at any point of this work may be enticed to wander farther, both in THE GRAND CANON and into wide-ranging sources that offer more uses. They will have many possible objectives in their searches; for example: 1) the need to find specific bibliographical citations; 2) to obtain details about specific items (if any are provided), such as variants, editions, or particular content notes; 3) information about author- or publisher-specific items; 4) to discern trends from chronological perspectives; 5) to identify items potentially pertinent to a project or program of study; 6) to list accounts of resource use within a particular region or political entity; 7) to sort out descriptions of items written in various languages.

One may argue that the bulk of the publications cited in THE GRAND CANON are unread, of very limited usefulness or attention even in their immediate lifetimes. True; but one has only to walk through the aisles of a large library to raise the same argument. Yet, all these things exist. I will not be the one who establishes that "this" item is potentially

<sup>3</sup> I take note of a telling example. In 1990, as an editor I prepared for publication one scholar's trans-

nearly two centuries later, was.

generally resorted to self-publication, and he duly sent out copies of his books to recipients he believed would welcome—and embrace—them; this volume included. We discovered that the book, though it had been in Cuvier's library in France, still had its folded signatures of pages uncut-for the better part of two centuries this copy of the book had never been opened for study! And yet, it was there, in another library, waiting to be used. Cuvier may not have been interested, but Cain,

lation of several works by the brilliant (some say incorrigible) early 19th-century naturalist Constantine Samuel Rafinesque, whose body of taxonomic work laid ground for problems throughout the 19th and 20th centuries in the scientific naming of living organisms and fossils alike. (Among other peculiarities, Rafinesque believed his taxonomic names would, rightfully and logically to him, have priority over those already published, going against long-standing protocols. He also peculiarly expounded on the "taxonomy" of a wide variety of natural phenomena.) Prof. A. J. Cain, during one of his mostly annual visits from England to Philadelphia's Academy of Natural Sciences, where I worked, translated into English for the first time several of Rafinesque's works on biological classification (Cain, "Constantine Samuel Rafinesque Schmaltz on Classification: A Translation of Early Works by Rafinesque with Introduction and Notes", Tryonia, no. 20, 1990). When we went to the Academy's library to retrieve one book, we discovered that it displayed the personal ownership stamp of one of the paramount naturalists of the early 19th century, Georges Cuvier. Rafinesque

more useful than "that" item—re-read the quotation at the head of this Preamble. Per chance in 2125 there will be a young scholar working on a thesis, studying "brief", "casual", or "restricted" references to prominent geographical locales, as an exploration of "marginal awarenesses" in geography as perceived by individuals and as it transitioned over the centuries; or similarly, an exploration of writers' reliance upon superficial references in order to pad out work. Who am I to say that one or another, or many, of the citations in THE GRAND CANON will not be of interest in such pursuits? And yet, this is just one of myriad possible examples.

Now, my inclusion in the bibliography of items in 114 languages other than English may be bewildering; some 10.2 percent of the citations are not in English. One might say, "Few can read Georgian—why bother to cite so few items in a vast bibliography?"; or on the other hand, someone else might harangue, "Surely there are more!" One may consider works in any language that is incomprehensible to a given individual are not practically useful. Yet, these works exist; someone produced them, so here they must be documented when they are found. The citations are useful even if one cannot read the items. With the increasing availability of automated translation services, which admittedly are not perfect, at minimum the gist of things can be obtained. Many of the translations are nonetheless very good; and it stands to reason that the automated services will improve with time. The plethora of "foreign"-language citations can serve users who do not need to read them; for example, for the gathering of statistics about what has been published, where, when, and by whom. Further, to omit a citation because it is deemed "unreadable" does not serve those users who can read those languages or who will want the information conveyed by the citations—and there are many. In the end, all of these citations offer up an idea of the great breadth of attention paid to the Colorado River and its Grand Canyon, whether in depth or simply as a parenthetical remark pertinent in one context or another.

The very purpose of THE GRAND CANON is to provide as completely as possible an accounting of publications that were offered to readers or viewers. I ignore "demand" in favor of "offering". Demand for a publication, a measure of popularity or perceived usefulness by the inquiring (and acquiring) public, has no role here; but that a publication was offered or distributed in the first place is the act that requires it to be listed in the bibliography. And scarcity is a moot point. Once a publication is made available, it is up to users to determine whether it has any value toward work at hand, and how it can be found if a copy is needed. THE GRAND CANON does not document a history of the creation or production of these publications, but of their origins and the channels of delivery to audiences.

Some bibliographies serve relatively brief useful lives—even this one. Despite the Grand Canyon-Lower Colorado River bibliography project being cumulative, its earlier incarnations were left behind as the project's context and methodologies expanded and matured by leaps and bounds. (See the Appendix to Part 1 of the in Volume 1/Part B; and see the example of "Citation style and improvement of citation content in this bibliography from 1981 to 2025" in the "Coverage and Format" section of the Introduction herein.) Starting with the very conventional, printed list of 1981 (that had been transcribed from handwritten index cards), the bibliography was reformatted in 1990 both conceptually and physically. It then included introductory essays to numerous newly arranged subject areas; it was produced concurrently in loose-leaf inkprint, on microfiche, and on digital disk (ASCII-formatted, or "text only"). A large "Supplement" followed in 1993, which managed to fill the loose-leaf binder far sooner than either the publisher or I thought it would. In 2000, a web-based database was inaugurated by the Grand Canyon Association, which I frequently updated into 2015, when technological issues in the customized software finally overwhelmed the process; it was taken offline in 2021. By then, THE GRAND CANON had been born, in 2012. I wish I could claim prescience of the effective end of the online database, but I originally meant for THE GRAND CANON to restore the bibliography as a monograph, where the whole bibliography could be seen again, one rather more useful as a searchable PDF than plain inkprint despite being less powerful than a database. There should be more to it, and there may yet be, but ideally it awaits new essays to introduce its various thematic parts and to place them in historiographical context. Still, this revised work also includes things that were not possible to include in the online database; perhaps the most startling is the typographical use of 31 non-Roman orthographies. And with THE GRAND CANON the whole has returned, where with the database it was not possible to see or browse the whole.

This bibliography project, now in its fifth decade, is a more permanent—historical—record. It grew and moved forward as its editions were produced; it left nothing behind, except some errors. Looking to the future, when the editions cease, that permanent chronicle will be frozen within its bounding years of record, still useful for that timeframe. As I have noted in the front matter to previous editions of THE GRAND CANON, this bibliography's meager beginning was a compilation of publications on Grand Canyon geology, soon hugely expanded to include other subject areas. From its inception in 1974, the object of this ever-expanding worldwide bibliography has been to record it all. I thought it could be done. In 2025, I'm still trying to do it.

•

THE GRAND CANON can be rough or cumbersome to some users *because* of its overarching usefulness: there is so much in it that is beyond their interests. Yet, all of these things exist thanks to all the people who created them. Even those items that were produced by and credited to organizations and government agencies were created by people. What may be disinteresting to one person can be useful to another. The bibliography's principal duty is to record, and to serve the person who finds information in it. Others will see the entirety as useful because of the statistical record it embodies, or for the historical assessments that can be crafted with it.

Then there is the matter of concentration. The core elements of this bibliography are the Grand Canyon and the Colorado River. One will see, however, that many citations include mention of these areas only in small measure, as compared to the full publication. Does that make this bibliography too far-reaching? Should I have excluded a book or a magazine article on the national parks because it includes far more than the Grand Canyon? Of course not. Then I must as well take note of a book or article whose author briefly takes note of a visit to the canyon. (I omit spurious things that mention a stop at the canyon without further remark; for example, a simple statement that "we went to see the Grand Canyon", and nothing else, does not warrant inclusion in THE GRAND CANON.) But even a brief note, or the inclusion of a photograph, reveals the author's perception of the canyon in comparison with other places about which are written; that the writer effused even briefly, or brushed past the canyon quickly, tells us something. Then, there are the items that are published far afield from the canyon and its river. Does a note in a Hungarian book or a South African magazine carry less weight because there are so many more American perspectives? Or do those same notes take on greater significance because of the attraction the canvon has had even far from America?

In terms of temporal distribution, things that are (relatively) very old inspire fascination, for many reasons, whereas very recent things may be seen with reduced interest. Why does older material hold innately greater interest? THE GRAND CANON holds many citations from centuries past, all of which will be points of fascination to a user, to wonder just what is of interest in the region covered by this bibliography, from so long ago. We can grasp the idea of how much time those centuries represent, and how they present themselves as historical resources. So this is also a bank, from which users over the next five centuries and more can withdraw not only for *our* five-century look back from 2025, but for what to us are simply contemporary things, too. Those very same contemporary items will be to the future users as old as are centuries-old citations are to us. That is why any bibliography is important—it is for use in its day, *and* for documentation long past its own date.

To look again at the idea that THE GRAND CANON can be rough or cumbersome to use, consider that just the idea of bibliographies regretfully presents to many people an image of tediously bland recitations of authors and titles, often displayed in uncomfortably small print, their use being an exercise of low inertia, to be done with as quickly as possible. They are, after all, just lists, hardly fireside reading except by the more peculiar of people (like bibliographers). That is the sort of bibliography I had been introduced to in the sixth grade (1963) by my elementary school librarian, Mrs. H—. It's a wonder that I ever returned to the work of bibliography. But a decade later I discovered the annotated bibliography, a super-bibliographical sort of thing that delivered information, sometimes with critical commentary, that was useful beyond the who did what, when; plus, some bibliographies even lay between the basic and critical forms. So here we are, six decades along from Mrs. H.'s wearied, Southern-accented reminders to a room full of puzzled kids to "get your bibl'ography". It was at about that very time, too, that Marshall McLuhan famously proclaimed, "the medium is the message", that it is the medium through which a message is communicated, not the message itself, that should be the subject of attention. So it is with bibliographies, a medium that should be met eagerly.

"Bibliography" is, honestly, an awful word. If one is directed to a bibliography but is not otherwise an enthusiast of, or at least appreciates, them, a common response is impatience, if not evasion. Even the suffix "-ography" is a turn-off to some people. If only there were another term, one less dull, one that promises interesting engagement. Some bibliographies are minor contrivances; others are monumentally important within their scope. Some are spectacularly unimaginative presentations that promise tedium or quick disinterest; others are beauties of layout, typography and binding that lure in their users. Yet they all use the same term. If one bibliography were to stand out for its purposes, if it promises to be tremendously comprehensive, it might as well be called a canon. Thus, the name for THE GRAND CANON follows on this theme—and it plays on the mostly nineteenth century, Spanish-influenced typography that spelled the world's Grand Canyon as "Grand Canon". (In non-Spanish language publications, it appeared widely with or without the *n*'s tilde, virtually never with the o's accute accent, at least when used with the word "Grand".) Despite some earlier attempts to avoid it, I concede to having to use the word "bibliography", at least in the subtitle, so that users and librarians will recognize it as such; and hopefully they will see the canon in it. THE GRAND CANON, with its dreaded "B" word, may as well aspire to some whimsy.

I recall my first visit, in the early 1980s, with Grand Canyon National Park's librarian, Louise Hinchliffe (1922–2016). I was barely, if not yet, 30 years of age. We had known each other only through (typewritten) correspondence—she was irreproachable in that respect, always responding promptly, often with more information than I had asked for—the perfect

public servant–librarian. When we met, she was somewhat taken aback, having assumed that I was an "older man", perhaps "retired" with time on my hands and indulging myself in Grand Canyon–Colorado River bibliography. Now that I *am* older, and in fact retired, I look back on five decades of indulgence with astonishment. Louise, who had been with the park a long time, had had in hand a few substantially outdated, selective, mimeographed bibliographies—and my then-recently published, bare-boned bibliography containing fewer than 4,000 simple citations, still in the economical, myopically "familiar" appearance of many bibliographies. What has become THE GRAND CANON is not only hugely expanded in the number of citations, but its format and overall presentation is something that neither Louise nor I could have imagined—something now alive—something more *readable*.

The 1981 edition first had been spun through my typewriter, on paper. I corrected galley proofs from the publisher (again, on paper). Personal computers were just on the horizon, word processing was not in the home, and the modern form of the web was still years away. Over the decades, my professional experience in typesetting and page composition (one of my several concomitant careers) has benefitted this latest product (though I admit limitations). Along the way, the 1990 second edition of the bibliography graduated to loose-leaf and microfiche (I provided the already laid out, camera-ready pages used for offset printing), and digital diskettes in ASCII format ("text only", as better understood today). We were on a bandwagon, but it had a short outing.

Enter: the online database in 2000. Leading up to it, the Grand Canyon Association and I (mostly I) envisioned a next edition produced statically, on CD-ROM. GCA conceived the interactive database. Its content was shopped out to a digital-products firm that constructed interactive pages for the use of the public, and provided a layer of password-protected pages with which I was able to frequently update and edit the bibliography using tools fashioned by programmers. It was a slow process, yet it was a success; but, as I noted already, that new bandwagon in turn inexorably rusted to a halt by 2015, limited by advances in technology with which it could not keep pace.

By 2010 I had been looking for a way to revive the monographic presentation of the online nebula of citations, in tandem with the database. The 2012 reappearance of the booklike monograph, in the form of THE GRAND CANON, ushered in new ways in which much more information was conveyed than could be done online. One can only guess what might be done decades from now with the information delivered *here*, applied to more greatly improved resources (digital or post-digital). The content is here; it is only a matter of personal and technological wherewithal and recrafting that can offer it up in unimagined ways without losing the direct and contextual information conveyed by the structure and content of these thousands of citations.

•

THE GRAND CANON LOOKS AT just one geographical area: on a map it is the Γ-shaped corridor that encompasses the greater Grand Canyon region and the lower Colorado River country between the canyon and the northernmost waters of the Gulf of California, its boundaries inflating here and there to envelope a historically if not physically connected locale like the Salton Sea and the Imperial–Mexicali Valley of California and Baja California. The histories from this geographical andiron are intertwined; the activities of its peoples are over millenia incredibly varied. Moreover, the coincidence is not lost on me, that in July 1776 the Pennsylvania State House, mentioned earlier, served as a stage for throwing off bonds of colonialism, while during the same time, in Nuevo España, padre Francisco Garcés had just been the first European to contact in their homeland the Havasupai, traditional inhabitants of the Grand Canyon, forecasting a colonialist storm that would put limits on their world as it already had in the worlds of their neighbors.

This is a five-century treasury of what writers of every bent, artists of all kinds, and other crowds and individuals have found of value or necessity enough to publicize: personal experiences, inspirations, reports on work that was done, or presentations of perspectives of the human and natural histories and conditions of the Grand Canyon and Colorado River country. Yet I dare not claim that the bibliographical study of this place prior to the present project was in a deplorable state; only that it had been superficial—at its most original, a judicious selection. Such selected compilations have their very good uses when seen as choosings of "valuable" or "pertinent" works. But frankly, valuable and pertinent to whom? Such lists are usually biased in favor of recognized works, familiar ones that show up again and again in these lists. Sometimes the lists tease with ancillary materials, such as those that are picked from serials rather than individually shelvable books. Instead, THE GRAND CANON has attempted to snare as much as possible—period. There are, though, many more items as yet undiscovered. We are too distantly separated in time and geography to be able to find everything that has been produced. Many items have been found serendipitously. The gigantic number of things that must still be recovered is tantalizing.

My intention has never been to assemble an encyclopedic bibliography—because encyclopedias abridge—but to create as closely as possible one that is exhaustive, knowing fully as well that the goal is elusive. It is, though, comprehensive; it accounts for every *kind* of production in every *subject* that I could think of. This compilation adds as much information as possible, too, to assist users in determining whether one or another item may be pertinent to their needs or interest. In other places, for the benefit of librarians and

collectors (and other bibliographers), I have added points that distinguish between printings, states, or editions, and other peculiarities of interest to such specialists.

More than a compilation of "publications", THE GRAND CANON represents a gathering of attention. It consolidates a worldwide, five century awareness of the Grand Canyon–Lower Colorado River region: how it has been seen, used, and reimagined, and how humans have explored, worked, and lived there—and tellingly, how, where, and when those messages were delivered to audiences small or large, locally, nationally, or globally. The Grand Canyon has unfailing worldwide attention,<sup>4</sup> at least since it was visibly brought to our awareness in the 19th century, and particularly since it was enthusiastically dropped into the churns of tourism and publishing.

When one sees the vastness of this five decades of work, it is difficult to avoid the idea that I display showmanship, an observation that comes to mind simply as a consequence of this having been such a long-lived, continuous, and voluminous project. But this is a work that simply shows to present users—and those of the future long after me—the tremendous number of publications, in numbers, scope and content, that can be applied to one's work that is at hand. A single item may be useful for its information or perspective; sets of items may be useful as contributions to a historical review or a statistical survey of publications. And so on.

Were I to know of more publications, they would be listed here. (Of course!) After all, over the decades I have not just reported the new works that came along, but have continually unearthed older publications that probably should have been found on earlier rounds. And the process of editing and embellishing citations from earlier editions continues unabated. In the end, though, omissions are due to my oversight and ignorance—if something is not known to me, I want to know about it. And errors are, well, never on purpose. We all are human.

•

I KEEP REFERRING to "publications", but just what are these? One might suppose, correctly, that the term refers to books, magazines, and so forth, though more broadly they include non-paper media like film-based materials, audio recordings, and digital disks. Publications are (we hope) available somewhere. But more precisely, publications are the very ways by which thoughts, ideas, and findings are not only broadcast but are sent to the future. Whereas manuscript materials, such as correspondence and unpublished journals, properly are the gold standard of historians' resources, they are effectively unknown to

<sup>&</sup>lt;sup>4</sup> In comparison, the Grand Canyon term has likewise been incredibly widely used by those who name other places after it, and who craft analogies and metaphors embracing the idea of the canyon. See what now is Volume 3 of THE GRAND CANON, *Grand Canyon: Colossal Mirror*.

those to whom *publications* are directed. It is the *published* things that reach the general public and administrators and managers of every sort (and historians, of course). Publications are the medium of the public's memory. In multiple, identical copies they continually reach the masses, immediately and usually forever. They can embrace everything from orations and institutionally produced tomes to the simplest statements of observation and the thinnest of pamphlets or brochures.

I also refer to "researchers" and "users". Although I imply that researchers are more studious than general users, the two really tightly intertwine, and I make no real distinction between the two other than that general users may have more casual or personal objectives than researchers who may be working with an academic or administrative perspective. All users may have to sift through a staggering amount of available resources in order to locate that which is deemed useful. In the case of this bibliography, those resources are citations that identify published materials. A bibliography can only go so far to identify pertinent material for research. Naturally, they provide individual citations to users who look for specific items. Beyond that, a bibliography can somewhat help by presenting its citations organized by categories. Then it is up to the user to *read* it. If reading is not desired, a user wants a "selective" bibliography or a database, and the user will have to be satisified with the biases introduced by the creators of those resources.

Even with a bibliography that desires to be comprehensive, there are biases. Except when a user is looking for a specific publication, citations arranged by category really just display a *probability* of whether the content of a cited item is pertinent to a task at hand. That probability depends upon whether or not the item's author conveyed suitably useful information in a title to reasonably indicate the overall content of that publication; but we know they are not always successful. Then there is the bibliographer's decision as to whether or not it is necessary to add a useful comment that conveys some meaningful analysis of what that publication actually contains, which means of course that the bibliographer must at least browse through the publication to ascertain its pertinence to the bibliography. Such added comments are most useful when just a smidgen of an item is pertinent to the subject of the bibliography, as compared to the whole of that item, saving the user from having to hunt down the complete item unless there is some particular reason to do so.

All this said, I will be the first one to admit that this bibliography can fail those who expect a quick look-up. Some authors cited in THE GRAND CANON are represented in several different parts—for the simple reason that they wrote about different subjects—so they (and even I, as one of those authors) may not be represented in a single, contiguous list in THE GRAND CANON Volume 1/Part B. Then, because this is an alphabetically arranged series

of citations, based on a first author's name when multiple authors are credited, one will not easily find an author in citations where the author is not the first of two or more in a byline. What the user needs is a database. One did exist for this bibliography, but at the expense of less precise data and its inability to allow the user to see the whole bibliography at once. Regarding this work's shortcomings, read on.

Each part of THE GRAND CANON is a separate subject or genre, yet once into it there are no assists to find the topically more specific citations. For example, Part 19 (Biology and Ecology of the Grand Canyon Region) does not separate botany from zoology. Surely, specialist users like mycologists (who study fungi) and malacologists (mollusks) would appreciate even more direct access to the specific items in their fields. Nonetheless, with this bibliography in hand, they can if necessary create their own specialized bibliographies. In the haste of a short human life, the paramount task for *this* bibliographer has been to round up as many items as possible, to funnel them into broad categories, where, the legwork done, they might await the re-creation of a database, since the technology that served the old database (that was kept current 2000–2015) failed to ensure a longer lifetime. However, the database must not deconstruct the citations but preserve the detailed elements that precisely convey information within each citation. Subtraction would defeat the very objective of the *canon* in THE GRAND CANON.

•

AS AN ASIDE, I am astonished to have felt the need to add a Catalogers Note—unheard of, I think—to the publisher's (or copyright) page (see it here) to point out that the word "canon", which is conveniently the same in both English and Spanish, can mean a standard, or authoritative, list. The word is neither "cañón" nor "canyon". Already in the short life of THE GRAND CANON the series title has been made into *The Grand Canyon* in several libraries' catalogs; I do not know whether by inattention, unfamiliarity with the word by individual catalogers, or by procedurally romanizing a "foreign" word (which it is not, nor is it pronounced like "canyon"). The bibliography has also been cited by authors who have introduced "Canyon" for Canon. Among librarians and researchers, at least, this should not happen. I hope it is not an expression of careless or oblivious neoacademics. Perhaps now literarily defiant, I stand by this precise title, one purposely whimsical (it plays on the principally 19th-century spelling of Grand Canyon as "Grand Canon" that appeared in non-

In older Spanish, "canon" had been spelled "cánon", though the diacritical mark has fallen into disuse. See, for example (bilingual title, publisher's information, and definition as published) Thomas (Tomas) Connelly (compiler), A New Dictionary of the Spanish and English Languages, Part the First, Volume I / Diccionario Nuevo de las Dos Lenguas Española é Inglesa, Parte Primera, Tomo I (Madrid: Pedro Julian Pereyra / Madrid en la Imprenta Real, Pedro Julian Pereyra, 1798), p. 399, one of several definitions: "cánon. Catálogo ó lista. A catalogue, list, or roll."

Spanish publications, a form that transmuted the Spanish *cañón* but pronounced it the same way). THE GRAND CANON, then, as a CANON, influentially serves as a guide to almost anything that has been published on its subject; and thus, it might serve as a foundation for new products that can be based on it (those who are interested, see the <u>Fair Use</u> statement on p. iii of this volume).

•

TO PAUSE ON the idea of "research": I wrote a part of this Preamble during a most unusual time in the world, when the pandemic not so catchingly named COVID-19 swept around us (the name stands for COrona VIrus Disease, also designated "2019 novel coronavirus"). Reediting of this paragraph then was done late in 2021, when even with vaccines Covid was still insidiously with us (due to new variants naturally, but also because of those who are vaccine-hesitant, which is not novel to today's population, and because of partisan politics that is shameful in the realm of public health). THE GRAND CANON does incidentally cite items concerning "plague"—and now, necessarily, "COVID-19".

During the time of most-concerning Covid, with many of the world's places of human congregation shuttered (libraries among them), I had even more industriously devoted my time to travel—via the web! Among my electronic sojourns outside the United States, I went most frequently to France, Spain, and Japan, though I touched down in less likely places, too, like New Zealand and Russia (the latter revealing a scarce 19th century atlas, in Russian, that was an important contribution to the *Cartobibliography* that is now Volume 2 of THE GRAND CANON).

In fact, my virtual travels have gone on for years, in search of resources for this bibliography. Peculiar spots unexpectedly provide information. For example, who knew that across eastern Europe and in Germany are individuals and clubs who are infatuated by cacti, who home in on, and even travel to, places like the Grand Canyon region's more isolated House Rock Valley? Most enjoyably for me during the nervous time of covidity were long forays deep into the Library of Congress and various universities and colleges worldwide, on the hunt for maps. Even some auction houses were providential sources of high-resolution images that were inspected in detail. At my leisure, in retirement and by the euphemistic "social distancing" required by the pandemic, I was able to track down hundreds of citations that I had thought I would never get to—and discovered many more—all because these institutions and firms had had the wherewithal to create high-quality digital images of these maps in the first place, post them to their websites, *then* to have kept their websites up and running during crises of public shutdown. (Thank you, everyone!) I have been fortunate to have seen many of the actual maps I cite—though hardly not as many one might expect or that I would wish to see in person—but the web resources

were undeniably invaluable. In fact, as much as I hate to say so, many times there is no need to be present in a library now, in order to obtain answers to some questions—although, in a sense I *was* in fact in those libraries whose digital reading rooms are accessible. (How does that differ, really, from the days when researchers requested photographic copies with which to work?)

I have ranged over the earth in search of material for THE GRAND CANON. Does it matter that I did not visit libraries and bookstores of other lands myself? I surely have missed out on opportunities for discovery. On the other hand, I would have been limited to these places' acquisitions programs, restricted to their academic needs, budgets, and (in the case of bookstores) sales potential. So instead, during the more recent years of the five decades I have been working on this project, I have relied on the remarkable resources of the web to locate things to cite. I am never ceased to be amazed—not that so much material is available online (though definitely it is a small fraction of all that must have been produced), but that people have made the effort to put it there in the first place! And in some cases, discoveries made online, which I may never have known about, have led me to acquire items for my own library, which I hope will become someone else's asset.

Bear all this in mind when using this bibliography. Within THE GRAND CANON'S geographical limits there are many works that will be seen as essential. A huge number of less essential works appear, too. There must be a lot more, of every kind of worth, not yet accounted for. And this bibliography can be reworked and built upon; no part of it is an end point.

•

SO, WHAT'S THE PURPOSE? It's worth taking a look back to 1881, when the Kansas State Historical Society—even then—fretted over the longevity of its holdings, borrowing on the concerns expressed by others more engaged with the processes of making publications available to readers and researchers. It's worth re-reading with the perspective of the 21st century (emphasis is mine).<sup>6</sup>

Next in value to the newspapers of the day, as materials of history, are the magazines and periodicals, regularly issued; and next, perhaps, pamphlets containing reports of societies and various organizations, public addresses, orations, memorial proceedings, etc. In the estimate here given of the comparative value of materials of a historical collection is only expressed the established opinion of persons who have made up such collections, and those who have had the opportunity to make use of them in historical, literary and statistical researches. Says A. R. Spofford, Librarian of Congress,

<sup>&</sup>lt;sup>6</sup> Transactions of the Kansas State Historical Society. First and Second Biennial Reports, together with a statement of the collections of the society, from its organization, in 1875, to January, 1881. Vols. I and II (Geo. W. Martin, Kansas Publishing House, Topeka, 1881), Vol. I, pp. 12-13.

whose experience in the work in which he is engaged is world-wide: "While the files of the journals of any period furnish, unquestionably, the best instruments for the history of that epoch, it is lamentable to reflect that so little care has ever been taken to preserve a fair representation of those of any age. The destiny of nearly all newspapers is swift destruction, and even those which are preserved commonly survive in a provokingly fragmentary state. The obvious causes of the rapid disappearance of periodical literature are, its volume, necessarily increasing with every year, the difficulty of lodging the files of any long period in our narrow apartments, and the continual demand for paper for the uses of trade. To these must be added the great cost of binding files of journals, increasing in the direct ratio of the size of the volumes. As so formidable an expense can be incurred by very few private subscribers to periodicals, so much the more important is it that the public libraries should not neglect a duty which they owe to their generation as well as to those that are to follow. These poor journals of to-day, which everybody is ready to stigmatize as trash not worth the room to store or the money to bind, are the very materials which the man of the future will search for with eagerness, and for some of which he will be ready to pay their weight in gold. These representatives of the commercial, industrial, inventive, social, literary, political, moral and religious life of the times should be preserved and handed down to posterity with sedulous care. No historian or other writer on any subject, who would write conscientiously or with full information, can afford to neglect this fruitful mine of the journals, where his richest materials are to be found."

"Pamphlets," says Lord Beaconsfield, "those leaves of an hour, and volumes of a season, and even of a week, slight and evanescent as they appear, and scorned at by opposite parties, while each cherishes its own, are in truth the records of the public mind, the secret history of a people, which does not always appear in the more open narrative."

That said, it is one thing to guard against the demise of the peculiar or scarce publication, but another to make known that it exists in the first place—that it is available (somewhere). Rarely can a bibliography tell its users where to find the items it cites. It is up to the user to find it. Thus it might seem that a bibliography, which documents people's work, is actually a shaky scaffold. But there is much to recommend it.

#### WHAT, THEN, REALLY IS THE USE OF THE GRAND CANON?

Throughout the front matter of this volume, I elaborate on many of THE GRAND CANON'S uses. Speaking in generalities here, I instead defy a user to identify its actual *un* usefulness as a complete body of work. Elsewhere, I do address those who might condemn it because it contains "too much"—that is, too much that is not of interest to them, or that might be perceived as too cluttered for "serious" use. Yet the point is, *every cited item exists*. So much is included in THE GRAND CANON to obviate the need of people in the future

to hunt and rediscover what might be of interest. Every citation documents as much as possible that which might signal some usefulness to a particular user. One can always ignore that which is deemed of no interest, but the greatest disservice is to have not been informed in the first place.<sup>7</sup>

THE GRAND CANON is a time capsule. Here is a lot of stuff that people have produced about the Grand Canyon, the Colorado River, and the lands 'round about. *Use* this bibliography. Take the time. *Read it*, even. One might scoff that one may as well read a dictionary. Bear with me. By looking through these pages, even if not on a hunt for anything specific, what catches your eye? It is predicatable that users, to answer the question, will jump to the names of the nobles of Grand Canyon and Colorado River history—but one knows them and knows who and what will be found. Then again, maybe there will be a few newish details to go along with those works; or, more telling, a citation *nearby* may trigger attention. Go and see.

After one's appetite for the expected is satisfied, look about for strangers; there are ever so many. What, too, of the souls who didn't sign their work? "Anonymous" they all are; a thousand or more of them are preserved in time in THE GRAND CANON. Or turn to years — or subjects—you have not explored before. Leave your comfort zone. See what people thought worthwhile to spend a few minutes, or years, to tell us what they saw, thought, felt, or imagined. Mostly with words they bring it to us, in prose and verse alike; others greet us through art, sound, and moving pictures, by lecturing or entertaining audiences in plays, or by resculpturing continents and countries on maps.

Several sections of Volume 1/Part B offer up publications and products that are of use to people who are not often separately recognized by compilers of a broad-based bibliography: those who have physical impairments or emotional needs. The citations in those parts may also be useful to those who work with and help these people. The authors and other creators of publications that are cited in other parts are adults, of course, yet a few are youngsters who caught the attention of their elders—a couple were precocious enough even to have produced and marketed their work on their own.

I encourage the *reading* of bibliographies, or at least browsing through them, when beginning to work on a project or at any time when there is an opportunity to step back from that work, just to see "what might be there" in walks through time. I have seen researchers, even those accomplished in their fields, working with books and manuscripts unexpectedly discover something that interests them from among *adjacent* items in front of them—if not for the project at hand, then for another one, even possibly starting a new one.

 $<sup>^{7}</sup>$  This truism was communicated to me by the CEO of a large firm in 2001 when I interviewed him for a practicum in archives and manuscripts.

It's not a novel observation, but the principle applies to bibliographical citations, too. Such guidance cannot happen with a single return, or a discrete set of returns, from a digital query. For the gathering of ideas, and for pointers as well as answers, bibliographies are treasure houses; they *can* be gone into and read. Humans gave their all to make the things that show up in bibliographies; and bibliographies are for human uses. I also encourage users—especially those who are new to THE GRAND CANON and expect to return to it—to read the Introduction in its whole. It provides the history of this work, it describes all of its content and its purposes and intents, and it offers ways in which it can be of continued, greater use.

If a user tends to see parts of this bibliography as swarming or congested, it is because it is not a refinement of theater or literature; it is a precise record, one not amenable to reduction. It is here for users, to be used; to be read, even. It offers bibliographical facts, historical perspectives, and data for statistics. Were one to declare a majority of citations as informational shipwrecks, practically unuseful if not outright rubbish, it would hide these very wrecks from the users who want to examine them. Here is everything. Use the citations or pass over them, but they at least are brought to your attention.

THE GRAND CANON is a tour guide. It tells of things: people, places, sounds, sights, smells, tastes, narratives, chronicles, memoirs, findings, reports, anecdotes, fibs, tales, statements, lessons, discoveries, debunkings, summaries, sermons, legends, poems, opinions, laws, rumors, announcements, pronouncements, speculations, assertions, dogmas, suggestions, novelties, resolutions, decrees, repetitions, petitions, pleas, beliefs and aliefs, truths and falsities (depending upon the writer or the reader); all presented in books, booklets, serials, pamphlets, maps, musical scores, transparencies (which, do not forget, include movies of the celluloid type), records (the paper kind, the kind for phonographs, and the kind that are photographs), and bytes (invisible, but they generate things that we humans can engage)—numerous and varied products from Afghanistan to Zimbabwe, on and on. They speak to us on these pages in the babble of 115 languages. Experiencing and sharing these citations (and then their thousands—millions—of points condensed in them) is the reward of *reading* a bibliography. And if you do embark on a reading, the citations will with time very likely wondrously change when they are re-read as we, too, age.

Read a citation, and you will grasp an idea. Obtain the item, and you will find what it can tell you. Read (or view or listen to) the item through, and what it does not tell you will lead you onward. And you will find that the trails and tales never come to an end. *Read! Explore! Often!* because the ink never dries.

# THE GRAND CANON

# INTRODUCTION TO CONTENT AND COVERAGE

Surely no other region in the world  $\ldots$  can exhibit anything comparable to it.

— Clarence Edward Dutton
 Tertiary History of the Grand Cañon District
 U.S. Geological Survey Monograph 2 (1882), p. 46

# **ABSTRACT**

THE GRAND CANON is a worldwide bibliography of the Grand Canyon and lower Colorado River regions in the southwestern United States and northwestern Mexico (in Arizona, Nevada, California, Baja California, and Sonora). This **canon**—a single, essential resource and guide—saves the extensive record of general, creative and technical compositions about, or even just touching upon, the land, the river, and the people there.

The bibliography is a historical record of activities and interests, divided into 32 subject areas—in Volume 1/Part B: *Bibliography* and a separate *Cartobibliography* (Volume 2)—containing 111,000 citations in 115 languages published during 489 years, from *circa* 1535 to 2024, produced in countries from Afghanistan to Zimbabwe. Proving a long-lasting, worldwide engagement with this region, the items embrace general and specific subjects including history, biography, and geography; social, natural, physical, and environmental sciences; engineering projects and water management policies; administrative oversight; legislative and judicial affairs; concerns of public-interest and special-advocacy organizations; interests and activities of Indigenous peoples; and works for and by youth and young adults. Publications are commonplace, technical, and specialized; in inkprint, special media for the visually impaired, and audio, audio-visual, and physically produced digital media. They have been published in popular, academic, commercial, and governmental venues, and privately.

No comparable bibliography exists for any other historical, natural, recreational, or utilitarian area overseen by federal or state agencies of the United States or Mexico. Value-added products can be created by academics, professionals, and avocational enthusiasts—even now Artificial Intelligence practitioners. Trends in personal, professional, and official interests may be detected in citations spanning decades and centuries. It serves, too, as a unique evidentiary record for administrators and resource managers who work within federal, state, Native American, and other jurisdictions covered by this work, and for specialists in public advocacy and not-for-profit organizations that have concerns in this region. Subsets of citations from this bibliography may serve as foundations for specialized and applied uses, scholarly studies, and administrative analysis and record.

Additional sections within Volume 1/Part A introduce readers to the Grand Canyon and lower Colorado River regions, and to the continued value of bibliographies even in the digital age.

## Distribution of Citations in THE GRAND CANON (5th Edition, 2025)

	1	Bibliographies and Indices	469
	2	General Publications	31,136

		Total	111,323

Lower Colorado River Region Separate-Coverage Group

These figures include a thousand or two more items that are repeated between two or more parts due to the overlapping subject of those publications. The actual number of overlapping, replicated citations has not been established.

<sup>\*</sup> This number counts "general" maps only, which formerly comprised Part 25 of THE GRAND CANON. All cartographic products are now incorporated into Volume 2 of THE GRAND CANON (*Cartobibliography*), which contains 4,675 items (see <u>cartographical statistics</u> on p. 74). General maps continue to be assigned the Item number prefix "25." and continue to be counted separately for statistical purposes such as this. Specialized cartographical products (those that are not "general" maps) continue to be cited in the parts of THE GRAND CANON to which they thematically belong (as also explained in the notes to Part 25) even though they also appear in the unified *Cartobibliography*.

## GENERAL INTRODUCTION

MUCH OF THIS lengthy section, Introduction to Content and Coverage, is provided for the reason that the Grand canon is meant to serve unknown users for a long time. I do not think that this work will be significantly reworked any time soon, though I can hope I am wrong. (I will not be available forever, continuing the project or to answer quesitons; of that I am not wrong.) As well as professionals and academics who resort to it, users will include students new to these subjects and to bibliographies, and plainly interested individuals. Newer generations may approach these subjects without experience; they may look for, or inadvertantly discover, insights on the methodologies I have used in a time before them.

The Introduction helps establish a sense of order by outlining the craft of bibliography and the construction of bibliographies—this one in particular. Inasmuch as there is no one way to compile a bibliography, these pages also present explanations and justifications for the system I have used, so that my style can be compared to other bibliographies, my methods queried, and critiques made as needed as time goes by. Surely, aspects of THE GRAND CANON's methods will become antiquated. In fact, a few of its styles already approach "vintage" status for the reason that this bibliography is the result of five decades of work, having begun in the era of card catalogs and carbon paper. The concept of "digital" resources was nothing like that which is recognized today. For the same reason, citations in the bibliography append, where appropriate, explanatory notes that might be useful to users in the future; for example, an acronym may be spelled out, or an abbreviation or a peculiar term may be explained, because in the future their archaic meanings perhaps will have been forgotten or difficult to rediscover.

Much of this sort of detail is not usual in bibliographies but is included in this highly augmented one, with an eye to the future. Many citations append contextual notes, another embellishment not often encountered in bibliographies, which can guide users in establishing the potential usefulness of an item toward their work.

# PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

General Remarks
Purpose and Audience
Administrative Context and Perspectives
Utility of This Work
Summary

**GENERAL REMARKS** Departing from its scholastic foundation as a plain bibliography, THE GRAND CANON is a documentary on the Grand Canyon and the lower Colorado River regions of the United States and Mexico. It is offered to researchers as always, but now it also purposely beckons to a broad spectrum of administrators, resource managers, public-issues advocates, and avocational users. It can be used also to produce further works of use to these people and organizations, whether more narrowly focused or more ambitious.

This is a **CANON** of the work of individuals, organizations, and official agencies. It records people, their ideas, the information thus conveyed, and in what publications all this can be found. In addition to its original academic uses, it is directed now also to non-academic administrative and derivitive uses; it is no longer simply a list of past publications. Introductory material and essays explain the process of creating and using a bibliography, viewing THE GRAND CANON, and bibliographies in general, from historical and functional perspectives.

Citations in THE GRAND CANON are source documentation for official activities, investigative and administrative projects, scholarly studies, activities of private organizations and public institutions, travel and other general pursuits by individuals; as well as personal reports, reflection, and opinion. The citations identify official records, items of directed research and investigations, and things for casual reading. Within 32 subject areas, and the separate Cartobibliography, the citations embrace productions created worldwide in 115 languages. They address general and specific subjects including history, biography, and geography; social, natural, physical, and environmental sciences; engineering projects and water management; administrative oversight; legislative and judicial affairs; concerns of public-interest and special-advocacy organizations; and the interests and activities of Indigenous peoples. It is the humanities that comprise the greatest

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

number of publications—including but not limited to history, biography, literature (memoirs, essays, fiction, verse, and so on, including works for and by youth and young adults), visual and performing arts, philosophy, and religion; and works of analysis, criticism, and speculation. Publications are in inkprint, special media for the visually impaired, and audio, audio-visual and digital media. Cited items include all reading age groups and levels of education. THE GRAND CANON serves current needs for documenting and assessing work published about activities and resources within the geographical area it covers. It provides the base material by which more in-depth and customized lists may be constructed, and it provides a foundation for value-added productions and, perhaps, some applications of Artificial Intelligence.

Geographically, the items listed in THE GRAND CANON focus first on the physiographic Grand Canyon of the Colorado River, covering some 2,400 square miles in Arizona, adding to it extensive adjacent lands.<sup>8</sup> Although a few citations pertain to extreme southern Utah, they pragmatically or historically relate to adjacent land in the Arizona Strip, which this bibliography embraces. The second geographical focus of the bibliography is the corridor formed by the lower Colorado River region from the mouth of the Grand Canyon, and the lower ends of the Virgin and Muddy River basins, to the sea. The river corridorproper in the area covered by this work passes along some 800 miles—beginning in Glen Canyon below Glen Canyon Dam, through the lengths of Marble and Grand Canyons, then drifting through several dam-impounded lakes that straddle the boundaries of Arizona, Nevada and California, finally trickling out to sea in the river's delta, usually completely dry now, in the Gulf of California astride the Baja California-Sonora boundary in Mexico. Coverage in the bibliography also includes the dams erected in the Colorado River below Grand Canyon (with particular attention to Hoover Dam), their appurtenant works, and the plans for dams that were to be built in the midst of Marble and Grand Canyons. Coverage also spreads onto lands adjacent to the river, reaches into the tendrils of aqueducts built to quench desert farms and cities, and detours down into the ancient Salton Sink below sea level in desert California that has periodically for ages refilled naturally from Colorado River overflows, and most recently, dramatically, by an accidental breach of the Colorado's man-made canalworks that remained open for nearly two years in the early 1900s, creating the present Salton Sea. As for the inclusion of the uppermost Gulf of California, at one time—in fact for a terribly long time—the Colorado flowed, torrentially at times, into the gulf. Living things (humans included), ashore and at sea, depended on it. Geologically, the lower Colorado region is sutured to the northern part of the gulf. Excluding this region from this bibliography would be as sensible as excluding the lands bounding the river along its course.

<sup>&</sup>lt;sup>8</sup> See the map in this volume's <u>FRONTISPIECE</u> that delineates the area covered by this bibliography.

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

There are good reasons to embrace both the Grand Canyon *and* the extended lower Colorado River from Glen Canyon Dam to the sea, a region whose parts may be seen as topographically, geologically, ecologically, climatically, culturally, and politically dissimilar. In fact, their human histories ever since prehistoric times and, in written records from the time since the Spanish incursions of the mid-1500s, are entwined. Their natural histories overlap in numerous ways, too, particularly the recent geological history of the Colorado River even though it flows across two distinctly different physiographical provinces of North America. One can investigate one part of the region without having to attend to things that pertain to another area, but complex interrelations reveal themselves as one refocuses broadly or when the region is viewed from multidisciplinary perspectives.

To thematically separate the lower Colorado River from the Grand Canyon is done easily; the historical and cultural separation, though, is less easy; geologically and environmentally, even more so. To separate Glen Canyon Dam from the desert Colorado River below Hoover Dam, or to separate Hoover Dam from the Grand Canyon upstream, overlooks the dramatic human influences these structures have all along the river's passageway. To separate Native American cultures of the Grand Canyon region from those of the lower Colorado River country diminishes traditional interactions and the impacts weighed upon all by European–American activities over five centuries everywhere in the region. The Colorado River traces human heritages that arose and continue through understanding and participating in life in this land. The river runs through the physical land, delivering life, death, and rebirth in absolute, inspirational and spiritual ways. It holds histories to be discovered and discovered anew, and it seems to withhold answers. So likewise this bibliography—looking at all of this land, and the life, places and things therein, it records the work of thousands; they tell us what we can understand, opine and may never know.ican

This part of the world has given people much to talk about, as the content of THE GRAND CANON testifies. Those who are drawn here, whether residentially, recreationally, professionally, avocationally, economically, administratively or spiritually, can find uses in this bibliography, a mixture of vital and casual works. Items are written by, and aimed toward, greatly different audiences who represent socially, culturally, scientifically, technologically, and temperamentally different communities and times, worldwide. In the present day, users of this bibliography—administrators and resource managers, workers in special-advocacy organizations, researchers in numerous fields of historical, scientific, and literary study, and general readers alike—will find here items that hold documentary, evidentiary and historical values, though the quality and overall usefulness of individual items and their values vary substantially and subjectively between users.

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

The works cited here were created by administrators, public-issues advocates, politicians, lobbyists, jurists, travelers, scientists, students, philosophers, clerics, entrepreneurs, employees, civil servants, and professional and lay writers, poets, artists, composers and thinkers from cultures, organizations and nations around the world. Some are people indigenous to the Grand Canyon region; most are wayfarers, transients, and observers from afar—great, notable, every-day, overlooked, and anonymous alike. The opinions, observations, censuses, consensuses, interpretations, and results are those of citizens and foreign nationals (adults and youth alike); the heads, agents, and representatives of governments (both American and foreign); and private, commercial, not-for-profit, professional, and spiritual organizations (again, American and foreign)—a melting pot of constituents, visitors, agendas, perspectives, philosophies, faiths, educations, and ages.

**PURPOSE AND AUDIENCE** The idea of a bibliography—after that of an accounting of what has been done—is to reveal things that people might become curious about. THE GRAND CANON provides a long-term record of publications, to be used by researchers, public servants, resource and public-issues advocates, and interested citizens wherever they may be. It is a contribution to the stewardship of the Grand Canyon and the Colorado River, and a contribution toward understanding cultural resources of the world.

THE GRAND CANON is the evidentiary and cultural record of the activities of individuals, organizations and official agencies historically since *circa* 1535. Admittedly, the European record of the Colorado River region does not predate the first encounter (at the Colorado River delta) in 1539, so why the selection of 1535? This liberty has been taken in THE GRAND CANON in order to examine the printed records during the period immediately predating 1539, in order to briefly contrast pre- and post-"discovery" perspectives. In this case only maps are pertinent, which are now listed in Volume 2, the *Cartobibliography* (see Part 25 in Volume 1/Part B [*Bibliography*] for information). The earliest records of printed works embracing the lower Colorado River region, closest to 1539, are two maps, from *circa* 1535 and 1536. They are documentary evidence for "what was known" (that is, nothing) of the region at this time. It is not useful to continue the examination—for the purposes of this bibliography—to earlier times.

The body of work cited in THE GRAND CANON relates in some way to the geographies, histories, and sciences of the Grand Canyon of Arizona and the reach of the Colorado River from the lowest section of Glen Canyon, through Marble Canyon, through the Grand Bend of the Colorado where it dashes through and out of the Grand Canyon, and dallies more wearily through the Colorado Desert, pausing for the work of dams, to the river's delta in the Gulf of California in Mexico, where it barely touches the salt air and dies alongside endangered

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

marine animals there. Culturally, THE GRAND CANON also is the record, through modern studies, of human presence in this region since prehistoric times; and geologically, it is the intrinsic record of the land itself since the times of Deep Time. As such, THE GRAND CANON cites publications that broadly document human perspectives, understandings, interpretations, activities, and uses of the resources in this landscape; aesthetic, philosophical, and tangible alike.

Of all of the items individually listed in THE GRAND CANON, each was produced in multiple, identical copies. One or another of these copies is available to interested parties somewhere, though pragmatically some items may stubbornly elude rediscovery or will be difficult to access because of a scarce number of originals, sparse distribution, lack of digital reproduction and access, or losses due to any number of reasons. Often a bibliographer will helpfully recommend that some scarce works will be found in "better research libraries"; but they fail to note that many such places are not accessible to the general reader, or with inconvenient restrictions, nor that such libraries' book stacks are not open to researchers. Today many works are accessible online (not wholly without encumbrances); and if not, they still have to be found in physical form *somewhere*. Such limitations are, however, beyond the documentary purpose of the bibliography, which is to note the *existence* of an item.

The purpose of THE GRAND CANON is to serve as a public collection of information about printed publications, audio-visual works, and physically distributed digital products. Within broad guidelines it includes everything that (in whole or in part) pertains to, or mentions in context, the Grand Canyon or the lower Colorado River. The material cited stops short of incessant newspaper listings and ephemeral internet resources. There is no other informational source like THE GRAND CANON, nor even anything truly comparable for any other landscape or real estate overseen by the National Park Service and other government agencies. Divided into 32 categories by subject, and a cartobibliography, it is the only categorized reference list about the Grand Canyon and the lower Colorado River.

The former Internet Edition of the Grand Canyon–Lower Colorado River bibliography, online 2000–2021, was different from an edition in the usual sense because, for the first time for this bibliography, the online version broke the binds of print. That was a leap of faith by everyone involved—compiler, publisher, and users. Most striking about that edition was the fact that there was one location for the bibliography, accessible by all who have access to the internet. Each user had a specific purpose for looking at it, but, unlike the print editions, no one experienced it in its entirety. There is, however, always a need to browse; many people prefer to work that way. It is still the best way to locate everything of special and peculiar interest, by bringing attention to issues and topics that otherwise might be overlooked in a historical retrospective or administrative accounting of activities.

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

Technological issues brought the Internet Edition down, making it impossible to make updates after mid-2015, and it was removed in October 2021.

THE GRAND CANON recreates the format of a printed monograph, produced in digital (PDF) format. It contains hyperlinks, thus users utilizing web browsers can migrate between different parts of the document while that technological ability survives. But the hyperlinks are not necessary to the overall structure of the bibliography nor are they needed to access the citations. The bibliography still functions perfectly as a resource even if the hyperlinks are not active. *And the volume is intact if it is printed out; no information is lost.* 

In a sense, the resources of the geographical regions embraced by THE GRAND CANON embody intangible cultural heritages. Indeed, even the collective of national parks in the United States had been deemed by Congress to be "cumulative expressions of a single national heritage"9. And yet, considering the focus on Grand Canyon National Park, some places like this carry an international heritage: partly with Native American activities and concerns and the broad infatuation of peoples around the world who converge here for the experience of seeing and participating in the Grand Canyon. Such views of indigenous and international heritage are also reflected in the activities of such world bodies as the United Nations Educational, Scientific, and Cultural Organization (UNESCO), which seeks to safeguard those heritages on behalf of Indigenous peoples and world communities. UNESCO's 2003 Convention for the Safeguarding of the Intangible Culture Heritage further strives to raise an awareness and appreciation for heritage at local, national and international levels. The convention focuses on the human aspects of cultural heritage (including oral traditions, performing arts, social practices, practices concerning nature and the universe, and craftsmanship. An analogous consideration of these efforts may see the Grand Canyon and Colorado River as the bearers of heritage and the stage for cultural practices; and indeed, the Grand Canyon itself is recognized as a UNESCO World Heritage Site. There is extensive documentation of all of these aspects of culture in thousands of individual and organizational publications. THE GRAND CANON collects and preserves the documentation for these evidentiary sources.

The many parts of THE GRAND CANON ensure that administrators, scholars, students, and the general community within the American nation and among its Indigenous peoples, and interested parties around the world, retain a permanent documentary record of ideas and work about the Grand Canyon and Colorado River country. These ideas and findings have been made available through widely distributed publications and through productions with channels of limited distribution. Many are works of creativity and thoughtful reflection; many more are casual notes and comments. Others come from hard and studi-

<sup>&</sup>lt;sup>9</sup> Statutes of the United States, 84 Stat., Public Law 91-383 (H. R. 14114, August 18, 1970).

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

ous research. And still others are derivatives of judicious evaluation and decision by government and other official agencies, or as the result of studies of policy options and officially sanctioned projects and investigations; and from legislative and judicial mandates. To these add as well critical evaluations and opinion of each, whether official or from an engaged citizenry.

One area of personal studies that often is overlooked in the great body of work of the humanities and sciences is genealogy. Whereas citations of purely genealogical works are rare in this bibliography, the panoply of authors' names and of individuals addressed as subjects in these works may contribute to the sources sought by genealogical workers.

Only users are in a position to recognize things that are pertinent to their tasks. It is easy to perceive here in THE GRAND CANON a huge, occluding nebula of impertinent works when one's focus on a project is pragmatically narrowed by time or budgetary constraints, expecting to find just certain shining stars, perfectly fitted answers to the questions at hand. But one project will be very different from another one. For THE GRAND CANON to retain its value to all users and purposes, it is created as definitively as possible. It will be used for a hopefully lengthy yet finite time by historians, biographers, ethnographers, archaeologists, sociologists, biologists, ecologists, geologists, genealogists; in fact, any focused topical reader, whether they be administrators, advocates, students, professionals, the passing curious—or even those rarely encountered individuals who are infatuated with bibliographies: bibliographiles. The most time- or budget-conscious users, such as administrators, actually may not use the bibliography except in the most pragmatic summary form or for statistical compilations. But research tasks that may have been assigned to other staff will in turn result in those staff being more informed about the details and breadth of previous work and thus the scope of material that is generally available. In this sense it will be very useful toward locating sources that address administrative issues and needs over the entire period of time that work has been conducted in these regions.

**ADMINISTRATIVE CONTEXT AND PERSPECTIVES** The Grand Canyon has long been acclaimed as one of the unofficial Seven Wonders of the Natural World (sometimes just as one of the Seven Wonders of the World); even distinctly the "eighth wonder of the world" according to 20th-century Swedish adventurer Sven Hedin and others, <sup>10</sup> perhaps not an afterthought but a statement to gain literary attention. Surely it is

\_

<sup>&</sup>lt;sup>10</sup> Свен Хедин [Sven Hedin], Восьмое чудо света: Большой Каньон [Vos'moe chudo sveta: Bol'shoi Kan'on] [Eighth wonder of the world: Grand Canyon] (S. P. Kublitskoi-Piottukh, translator), Gosudarst-vennoye Izdatel'stvo (Moscow and Leningrad, 1928) [Russian translation from the Swedish Grand Canyon, Albert Bonniers Förlag (Stockholm, 1925)] (ITEM NOS. 2.11947, 2.23305, respectively.) Later writers have also used the "Eighth Wonder" tag, which incidenally does not show in the titles of Hedin's original volume in Swedish and in the German translation.

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

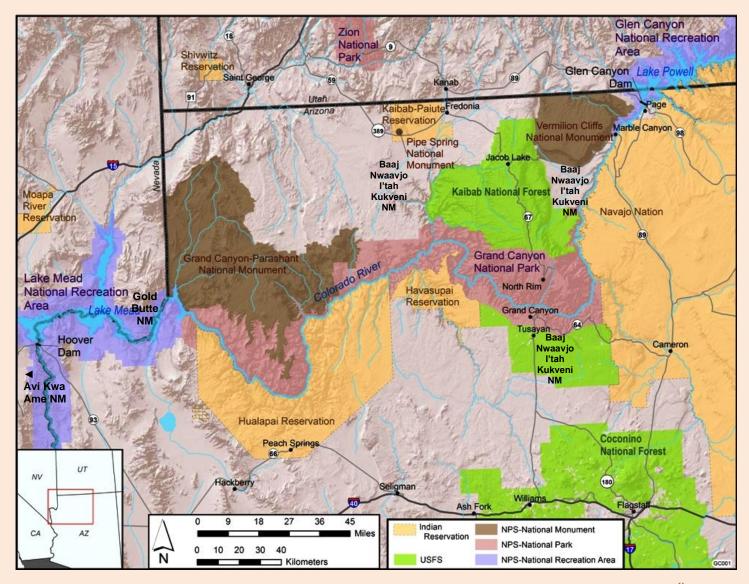

the *first* wonder to many aficionados of this land. The Grand Canyon and the Colorado River are recognized as having significant historical, cultural, geological, and biological resources. Grand Canyon National Park's own administrative themes, as generally outlined by the park in a 2011 "Park Themes" document, are "inspiration", "water", "geology", "biology", "preservation", and "Native American connections".<sup>11</sup>

The Grand Canyon and surrounding areas have been accorded various official designations relating to cultural, historical, and other significant aspects. Grand Canyon National Park has been designated a World Heritage Site by UNESCO. In another UNESCOassisted arrangement, in 2007 the park and the Yuntaishan World Geopark (云台山世界地质 公园), with its Qingtianhe River in Henan Province of the northeastern part of the People's Republic of China, established a sister-park relationship to pursue beneficial projects of technical and professional cooperation. The village of Grand Canyon, Arizona, is a National Historic Landmark District. A number of the structures there are individually designated National Historic Landmarks and more are listed in the National Register of Historic Places. The North Rim community is also a National Historic Landmark District. The Arizona Trail, a National Scenic Trail that travels from the international boundary with Mexico to the Arizona-Utah boundary, crosses the Grand Canyon on two of its most historic trails and passes through the Kaibab National Forest. Other human-made productions within the areas covered by THE GRAND CANON—Hoover Dam for one well known along with its appurtenant works, and, to cite a less well known project, the trans-Grand Canyon telephone line, both products of work projects of the 1930s—have been recognized by professional and historical organizations as significant achievements of technology, engineering, and architecture, among other accords. Commemorative markers of all kinds abound throughout the region, on, by and inside structures, and along highways, walkways, and footpaths.

Efforts to designate the Grand Canyon as a national park began in 1882, when an unsuccessful federal proposal was made during the year when first appeared Clarence Edward Dutton's magnificent text and atlas, *Tertiary History of the Grand Cañon District*. It was not for another decade that some measure of executive or statutory reserve was accorded to part of the canyon. In 1893 President Benjamin Harrison signed for the Grand Canyon Forest Reserve that protected a portion of the eastern Grand Canyon. In 1906 President Theodore Roosevelt authorized the Grand Canyon Game Reserve, enacting official protection of the wildlife there; then in 1908 he set aside the Grand Canyon National Monument by executive order. After several years of proposals in the United States Congress, and after

## Lake Mead National Recreation Area

(Outline map from U.S. National Park Service)

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

the National Park Service was established in 1916, Grand Canyon National Park was created in 1919. It was substantially increased in area to its present size in the Grand Canyon National Park Enlargement Act of 1975, to embrace Marble Canyon and much of the western portions of the canyon exclusive of the Havasupai and Hualapai Indian Reservations and Lake Mead National Recreation Area.

Within the broader scope of THE GRAND CANON's coverage of published works are found various other national monuments, recreation areas, and other federally designated lands and reserves. Most prominent among them are the Vermilion Cliffs National Monument, Grand Canyon–Parashant National Monument, Baaj Nwaavjo I'tah Kukveni–Ancestral Footprints of the Grand Canyon National Monument, Gold Butte National Monument, Kaibab National Forest, Glen Canyon National Recreation Area, and Lake Mead National Recreation Area. Also sharing boundaries with Grand Canyon National Park are the sovereign tribal lands of the Navajo Nation and the Havasupai and Hualapai Tribes, while other, geographically more distant tribes have cultural ties to the Grand Canyon.

So many official acknowledgments of cultural, natural, or technological significance pale against the intangible measure of popular acclaim. The Grand Canyon in particular, but also its surrounding lands and the lower Colorado River, have ever since the mid-19th century been in the top numbers of remarkable landscapes; remarkable for their aesthetics, topography, geology, ecology, history, and cultural relationships.

For more than a century a statement of encouragement by President Theodore Roosevelt has been quoted in popular, scholarly, and administrative venues. In a speech at the Grand Canyon in 1903 Roosevelt said that the canyon is "one of the great sights which every American, if he can travel at all, should see." And for those who cannot travel there—today this may include an otherwise interested worldwide clientele as well—there are innumerable books, travel guides, magazine articles, and audio-visual productions about the canyon and the river that bring the marvels into homes and classrooms, and through Braille and other tactile productions literally into the hands and minds of readers. In fact, even at the time when Roosevelt spoke to an assembled crowd in the fledgling village of Grand Canyon there already existed large numbers of books and, particularly, articles about the canyon—not to overlook also travel advertisements galore.

The Colorado River in the Grand Canyon, in addition to falling under the purview of the National Park Service within the boundaries of Grand Canyon National Park, is administered under other agencies of the U.S. Department of the Interior in the national recreation

<sup>&</sup>lt;sup>12</sup> See entries for Roosevelt (1903) in Part 2 of bibliography. See also Roosevelt, "I have come here to see the Grand Canyon . . ." (introduction by Earle Spamer). *The Ol' Pioneer* (Grand Canyon Pioneers Society), 8(7) (Summer 1997): 12-15 [transcriptions of two versions of Roosevelt's speech at Grand Canyon, May 6, 1903. (ITEM NO. 2.5479)].

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

areas immediately up- and downstream of the park (Glen Canyon and Lake Mead National Recreation Areas, respectively). On the rims and to the west, neighboring landscapes and rangelands are administered by the Interior department's Bureau of Land Management, including Vermilion Cliffs National Monument in Arizona and Gold Butte National Monument in Nevada. Immediately adjacent to the south and north, too, are the segments of the Kaibab National Forest, administered under the U.S. Department of Agriculture's Forest Service. Within Glen Canyon National Recreation Area the Interior department's Bureau of Reclamation operates Glen Canyon Dam (completed 1964), the functions of which affect cultural, biological, and geological resources downstream in Marble and Grand Canyons. Accordingly, various protective legislations have been implemented in this part of the corridor, which partly direct how the dam's power production facilities are operated. Multistate compacts and international treaties (with Mexico) regarding water supply and use, dating as early as a century ago, further influence dam operations today throughout the Colorado River basin. During 1983–1996 (including phasing-in and -out periods), the U.S. Bureau of Reclamation conducted the Glen Canyon Environmental Studies (GCES) program, which, with the cooperation of other agencies and commissioned studies passing through two principal administrative phases, conducted the first truly comprehensive series of investigations in the Colorado River corridor relating to hydrology, fluvial geomorphology and sedimentology, resources of biology and physical ecology, and archaeology; all as contributing to the Environmental Impact Statement pertaining to the operation of Glen Canyon Dam. 13 The Glen Canyon Dam Adaptive Management Program, also under the auspices of the Bureau of Reclamation, currently cooperates in the management of the dam with more than two dozen other stakeholders including Native American tribes. The science-information provider for the Adaptive Management Program is the Grand Canyon Monitoring and Research Center, which had phased in at the end of the GCES program under the auspices of the U.S. Geological Survey, another Department of the Interior agency. Downstream, the Bureau of Reclamation operates Hoover Dam (1936) within Lake Mead National Recreation Area; its impoundment backs up into the national park in the western end of the physiographic Grand Canyon, which had affected the hydrological and ecological regimes there long before modern politically and socially organized responses to environmental concerns. The dams and their appurtenant works in the lower Colorado River are likewise operated by Reclamation. Descending the river from Hoover Dam one encounters Davis Dam (1949), Parker Dam (1939), Imperial Dam (1938), and Laguna Dam (1909); and, in the U.S.-Mexico limitrophe, Morelos Dam (1950). Along the lower Colorado River a variety of federal, state and local agencies line the river with recreation areas, wildlife refuges, natural resources areas, and public parks. In Mexico, Río Colorado (its

<sup>&</sup>lt;sup>13</sup> See Part 20 of the bibliography. Research documents and legislative materials stemming from the GCES program will be found throughout THE GRAND CANON.

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

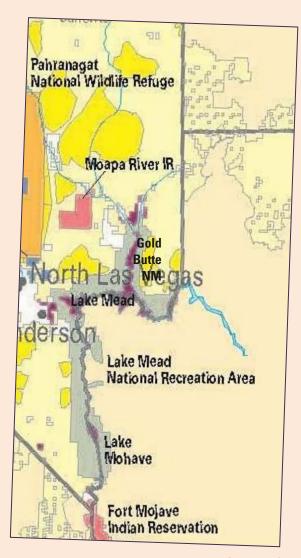

pitiful remnant in the best of times) eventually passes into the Reserva de la Biosfera Alto Golfo de California y Delta del Río Colorado that embraces the northernmost portion of the Gulf of California, its southern boundary spanning the gulf about between San Felipe, Baja California, on the west and Puerto Peñasco, Sonora, on the east. Various agricultural drainages also are encountered in the lower river region, particularly in the delta, administered by U.S. and Mexican federal authorities.

A significant portion of the Grand Canyon and the lower Colorado River corridor is administratively overseen by federal and state governmental agencies of the United States and Mexico, and by the autonomous governments of Indigenous peoples. Accordingly, THE GRAND CANON may aid these and other groups with its unique accounting of published research and reference materials that are available specifically about this linear region. And perhaps even more importantly it serves as a documentary record, international in scope, of the work done on, and the perspectives held of, the lands, waters, airspaces, resources, and human needs that are administered or protected by these agencies.

The administrative units with oversight of lands in the Grand Canyon-lower Colorado River region fall within different departments of the United States, Mexican, and autonomous governments of Indigenous peoples. They can be noted in summary order as one passes through the geographical range of this work from the Arizona–Utah boundary to Mexico; and together they demonstrate the interlocking political and cultural characteristics of the region. The principal administrative units represented are Glen Canyon National Recreation Area; Grand Canyon National Park; Vermilion Cliffs, Grand Canyon-Parashant, Baaj Nwaayjo I'tah Kukveni-Ancestral Footprints of the Grand Canyon, Gold Butte, and Mojave Trails National Monuments (which monuments also are in the Bureau of Land Management's National Landscape Conservation System); the more recently designated Avi Kwa Ame National Monument and Chuckwalla Mountains National Monument. both generally in the lower Colorado River corridor; Lake Mead National Recreation Area; Kaibab National Forest (portions of which are north and south of the national park); plus lands and facilities administered by the Bureau of Reclamation, Bureau of Land Management, Bureau of Indian Affairs, federal and state wildlife refuges and environmental reserves, and Mexican national interests—and throughout there are the sovereign lands, agencies and interests of groups of Indigenous Americans. Segregated Wilderness areas are also administered by the Bureau of Land Management, Fish and Wildlife Service, Forest Service, and National Park Service. These are congressionally reserved lands limiting human activities to scientific and historical study and non-mechanized recreation. Such areas are found throughout the region covered by THE GRAND CANON. Near to the Grand Canyon there is also the Little Colorado River Navajo Tribal Park and the Marble Canyon Navajo Tribal Park in the Navajo Nation that abuts the eastern end of the physiographic Grand Canyon. In the western portion of the Grand Canyon

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

the expansive Hualapai Indian Reservation occupies the southern side of the canyon. While the Hualapai Tribe has not designated tribal parks, they do operate in a contracted commercial partnership a tourist enterprise known familiarly as Grand Canyon West, a name that has since given this part of the Grand Canyon de facto geographical status. On the Kaibab Plateau north of the canyon the Kaibab Squirrel National Natural Landmark spans the boundary between the national park and the Kaibab National Forest; and the U.S. Federal Highway Administration's ceremonially designated Kaibab Plateau-North Rim Parkway (Arizona Route 67), a National Scenic Byway, guides travelers through a cultural and ecological scene of significance along the way to the tourist community of North Rim on the brink of Grand Canyon. The region embraced by THE GRAND CANON also includes federally designated natural and wilderness areas and, along the lower Colorado River, wildlife refuges, including those of the Salton Sea region in California. In this area there are the Grapevine Mesa Joshua Trees National Natural Landmark, Arizona; Valley of Fire National Natural Landmark, Nevada; and in California the Turtle Mountains Natural Area, Imperial Sand Hills, and San Felipe Creek Area National Natural Landmarks. (Also, in extreme southwestern Utah and barely peripheral to the coverage in THE GRAND CANON, there is the Joshua Tree Natural Area National Natural Landmark.) In the river delta region of Mexico there are the Upper Gulf of California/Colorado River Delta Biosphere Reserve and the Pinacate/Gran Desierto de Alta Biosphere Reserve. To all these add the stakes of state agencies in Arizona, Nevada, California, Baja California, and Sonora, and local agencies in every city, town, and community of the area; as well as the rights accorded to commercial enterprises of all kinds and private-property owners. And to apply a broader oversight to all, add the legislative and judicial branches of governments that influence activities, holdings, and accountability, ranging from international treaties to federal and state regulations and local ordinances.

The Mojave Desert Inventory and Monitoring Network, under the U.S. National Park Service, is an environmentally focused consortium of nine National Park System units that lie within the Mojave Desert region of Arizona, Nevada, and California. Those units which lie within the coverage of THE GRAND CANON are Grand Canyon–Parashant National Monument and Lake Mead National Recreation Area.

There have been new *kinds* of administrative entities considered for the greater Grand Canyon region as well, which, though thus far legislatively unsuccessful, would protect inherent environmental and cultural aspects of the land—on its surface and subsurface alike. One was the proposed Grand Canyon Watershed National Monument, which would have proactively defended the regional aquifers and attendant surface environmental conditions from adverse impacts of human activities such as mining. The other was the proposed Greater Grand Canyon Heritage National Monument, which, had it been succesful, would "preserve and restore the Grand Canyon's heritage of sacred lands

and ecosystems on approximately 1.7 million acres of public lands that are integral to Grand Canyon National Park". These proposed entities realized enactment in 2023 as the Baaj Nwaavjo I'tah Kukveni–Ancestral Footprints of the Grand Canyon National Monument.

Much of the physiographic Grand Canyon is overseen by the U.S. Department of the Interior, particularly the National Park Service, but within the broader region covered by THE GRAND CANON there is a conglomerate of federal departments and agencies that have oversight over adjacent lands, waters, and airspaces. These include, but are by no means limited to, such diversely different government branches as the Bureau of Land Management, the Bureau of Indian Affairs, the Fish and Wildlife Service, the Federal Aviation Administration, and (on navigable inland waters) the U.S. Coast Guard. In addition, areas are overseen by state and local agencies, the people and governing agencies of Native American tribes, and various not-for-profit and for-profit organizations. Some areas are private inholdings like ranches, mines, and tourist enterprises. A few properties have been turned over to federal jurisdiction or given to the care of not-for-profit organizations. Incidental events also are overseen by federal agencies, such as National Transportation Safety Board investigations of air and highway transportation accidents.

Eleven federally recognized Native American tribes have historical and cultural connections with the Grand Canyon. The administration at Grand Canyon National Park in particular, as well as those of adjacent national monuments and national forests, hold formal inter-governmental consultations and have executed with tribes individual agreements that pertain to land and resource uses and protections on the federal lands (tribes as defined by the federal government):

Havasupai Tribe, Havasupai Reservation (Arizona)

Hopi Tribe (Arizona)

Hualapai Indian Tribe, Hualapai Reservation (Arizona)

Kaibab Band of Paiute Indians, Kaibab Indian Reservation (Arizona)

Las Vegas Band of Paiute Indians, Las Vegas Indian Colony (Nevada)

Moapa Band of Paiute Indians, Moapa River Indian Reservation (Nevada)

Navajo Nation (Arizona, New Mexico and Utah)

Paiute Indian Tribe of Utah

Cedar Band of Paiutes, Kanosh Band of Paiutes, Koosharem Band of Paiutes, Indian Peaks Band of Paiutes, and Shivwits Band of Paiutes

San Juan Southern Paiute Tribe (Arizona)

The Pueblo of Zuni, Zuni Reservation (New Mexico)

Yavapai-Apache Nation, Camp Verde Indian Reservation (Arizona)

Within the lower Colorado River region (as detailed by the geographical bounds of this bibliography) there are Indigenous peoples who have traditional and legislatively

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

administered lands in the U.S. and Mexico. While these people do not all have cultural identifications with the Grand Canyon, their histories and unique cultural heritages are integrated with the greater Southwest. These groups and their reserved lands are:

Moapa River Indian Tribe, Moapa River Indian Reservation (Nevada)

Fort Mojave Indian Tribe, Fort Mojave Indian Reservation (Arizona, California and Nevada)

Colorado River Indian Tribes (Chemehuevi, Hopi, Mohave, and Navajo), Colorado River Indian Reservation (Arizona and California)

Chemehuevi Indian Tribe of the Chemehuevi Reservation (California)

Quechan Indian Tribe, Fort Yuma Indian Reservation (Arizona and California)

Cocopah Indian Tribe, Cocopah Indian Reservation (Arizona)

Cabazon Band of Mission Indians, Cabazon Reservation (California)

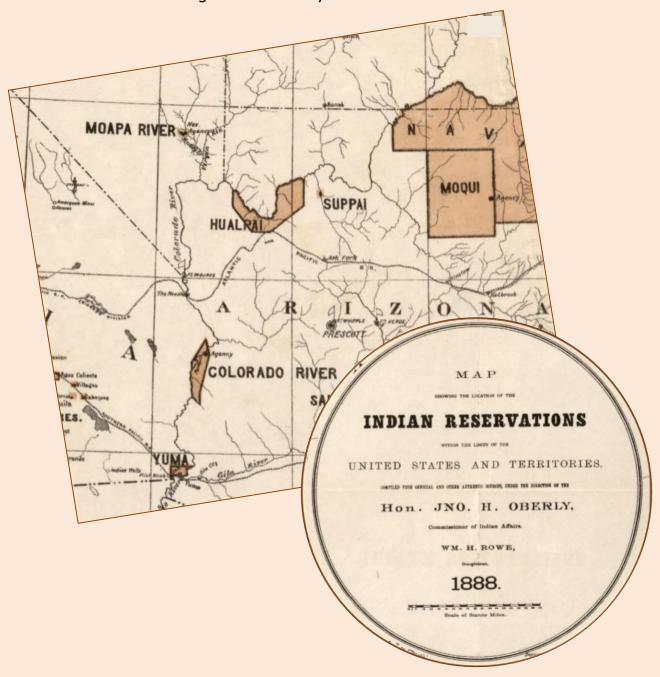

Torres Martinez Desert Cahuilla Indians, Torres Martinez Reservation (California)

Cucapá (or Cocopa, *Xawill kwnchawaay*) (Baja California, México; traditional lands in the Río Colorado delta)

In addition, bands of the Southern Paiute people have traditional-use ranges within the northern part of the lower Colorado River region

(continued)

# Historical perspective, 1888, of American Indian tribal reservations in the region covered by THE GRAND CANON

(Library of Congress, https://www.loc.gov/resource/g3701g.ct002651/)

PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

# American Indian tribal reservations in the region covered by THE GRAND CANON, based on U.S. Census data for 2011

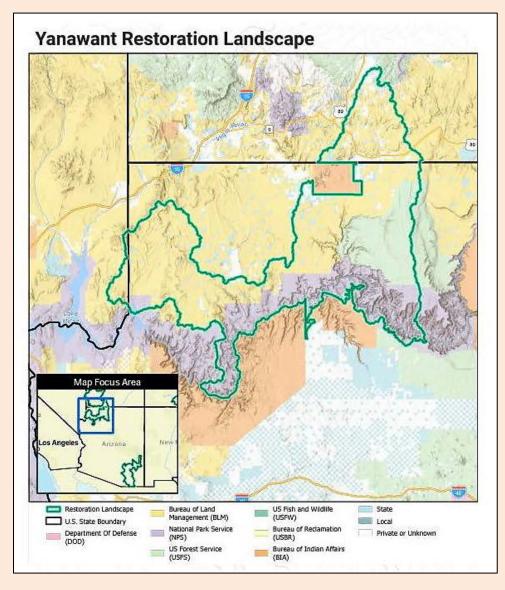

Light boundary lines delimit counties. Areas that are grayed-out show tribal names that are extralimital to this bibliography.

For U.S. Census quadrangle boundaries, including those on Native American lands, see Section 4C of Volume 2, *Cartobibliography* (for more information see Part 25 in Volume 1/Part B [Bibliography]).

(Details of simplified maps, based on U.S. Census data for 2011, from U.S. Environmental Protection Agency, Region 9) A special environmental landscape has been defined by the U.S. Bureau of Land management, embracing a significant portion of the Arizona Strip and some adjacent lands in Utah and Nevada. This is the Yanawant Restoration Landscape. "Restoration investments will build a more resilient landscape by restoring habitat for threatened and endangered species, improving drought resilience and ecosystem health, and reducing fuel loads and wildfire risk by removing noxious and invasive species and eliminating encroaching confers. Restoring native grasses will create cover and connectivity for wildlife and stabilize soils, helping to improve and sustain the watershed's overall function." <sup>14</sup>

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

The apportionment and use of waters of the Colorado River is the result of a complex arbitrative, legislative and judicial history of regulation and responsibilities among the seven U.S. states within the Colorado River basin—Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming—and through treaties ratified by the legislative bodies of the United States and Mexico and agreements of the U.S.-Mexico International Boundary and Water Commission. Concerns and usage variances go back more than a century, but which were first formalized nationally in the Colorado River Compact of 1922, which remains the principal document of domestic guidance among the seven co-signing U.S. states. National and international responses to natural and human-caused changes in water supply, water quality, and overall environmental conditions, have also dramatically affected interstate and international relations, beginning with devastating breakouts of the Colorado River after the turn to the 20th century, the result of failed headgates, which allowed the river to flow unimpeded to the ancient lakebed of the Salton Sink. This came soon after a smaller, natural breakout in the early 1890s. The outbreaks poured northwestward into the basin below sea level, filling what now is called the Salton Sea, where a geological history of river outbreaks is recorded by extensive salt flats, raised beaches, and archaeological occupancy sites. Since then, the means of water usage within the United States' portion of the Colorado River basin has resulted in increased salts and other pollutants from irrigation waters taken from and redrained to the river. Mexico now receives a far more brackish content of river water in greatly diminished flows. The desiccation of the Colorado River delta affects human cultures and the natural habitats of animals and plants. Now, too, we begin to face physical, economic and culturally debilitating, and politically challenging, effects of a natural return to more usual climatic conditions of protracted drought throughout the Southwest—nature knows nothing of negotiated, legislated, and adjudicated schemes of water apportionment. This will affect the Grand Canyon, too, in part directly through climatic effects, and in part through the impacts biological, geological, cultural, and economic—that will come through modifications of river flows and reservoir containments and through the natural impacts on atmospheric and groundwater hydrology.

The greater Grand Canyon region, and by extension the lower Colorado River corridor that begins within the Marble–Grand Canyon complex, is an arena of human interaction unto itself, affected by decisions and private uses made by its various administrators and owners; from environmental surveys to the surveys for dams, from the inventory of biological resources to the productions of mines. Into this region have come, for innumerable reasons, millions of new residents, and hundreds of millions of passers-by of all ages. A relative few of them have left written records of their impressions through exhaustive and casual publications alike, expounding on what they did or what they found there—in prose and verse from global commercial presses, government printers, and the

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

smallest private concerns; in recorded impressions of music, vocal and instrumental; in photography, still and motion-picture; in artistry through painting, drawing, and sketching; in maps of all scales, purposes, and accuracy; and in the tenuous medium of computer software.

While THE GRAND CANON lists numerous materials that relate to legislative acts, judicial decisions, and other official activities, it is not yet either comprehensive or definitive enough to declare that it preserves a conscientious, continuous record of decisions, policies, historical precedents, or technological procedures. Similarly, it is not a perfect record of avocational activities of citizens and visitors. Neither is it a listing of unpublished resources, the traditional trove for historians and litigants. And for the time being, there is no central source for the *interdisciplinary* needs of managers, researchers and other readers who have responsibility for, or who work in, the regions covered by THE GRAND CANON, although by default this work serves partially this function.

THE GRAND CANON can stand both as a resource manager's reference and a resource for interpretation and education. It does not figure into Grand Canyon National Park's "Foundation Statement", prepared in 2010, because the bibliography is not a National Park Service product nor sponsored by the Park Service. Although independently compiled, it has been sponsored by the not-for-profit Grand Canyon Conservancy (also under its earlier names, Grand Canyon National History Association, and Grand Canyon Association), which cooperates independently with the park in educational, interpretive, and other outreach programs. The bibliography stands responsibly and responsively as it has for four decades. It constantly grows and is available to a world community of professionals and avocationists. It documents for all who are interested the quantity and quality of human attention to the Grand Canyon–lower Colorado River region.

THE GRAND CANON further serves as a broad statistical base, from which evaluations and accountings of selected subjects, topics, or authors can be made. A chronology of any of these can likewise be derived by using this bibliography. As for its administrative value, the citations direct users to pertinent works that are available to answer questions. In this fashion it provides the information to administrators who require an understanding of the scope and content of work that has already been done within their areas of oversight. Administrative key-point lists can focus resource managers on sources, arranged topically, that will be of greatest utility in understanding what kinds of previous research is more readily accessible, and to expose underserved or inadequately noted areas of attention.

Management and research issues continually change and refocus, as do public responses to and opinions on these issues. These in turn create new productions that pertain to this work. But whereas research and reflection change, the mission of THE GRAND

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

CANON is not to anticipate and refocus such work, but to provide source lists for informed guidance in the work of administrators, academics, private groups and individuals.

**UTILITY OF THIS WORK** While various bibliographies and reference lists for the Grand Canyon or the Colorado River had been compiled in the 20th century by individuals and official agencies alike, they restricted the listings to principal works then available and noticed, resulting in predictably similar, albeit updated, products. None of them contained a comprehensive accounting of the profusion of periodical articles, although a few took notice of selected early ones.

When Grand Canyon National Park was created in 1919, the Director's report for the National Park Service that year included a "Bibliography of Books, Government Reports, and Magazine Articles on Grand Canyon National Park"—five pages containing 96 citations. This represented an official perspective of pertinent, available literature at the time when the Grand Canyon was made a national park. In some respects it is a microcosm of THE GRAND CANON in that it contains general, scholarly, and fictional works, books and magazine articles alike; but it differs in that all are in English. There is also no indication of how these items were selected; one may presume these were what was at hand or suggested to its compiler.

From the standpoint of administrative uses in the region covered by THE GRAND CANON, managers in federal and state units and agencies have had no open, definitive source to things that have been done within their jurisdictions other than the official and working reports generated by their administrative entities. In the general and professional literature both there is a tremendously greater amount of observation and opinion regarding the units these administrators and managers oversee, who often work at a disadvantage when required to manage disciplines with which they or their delegees may be less familiar. While often there may be insufficient time for exhaustively detailed analyses, a perspective of previous work can be gleaned from compilations like the present document, which may thus provide to these managers greater interpretive insight.

No comparably robust accounting of publications exists for any unit administered by the National Park Service, the National Forest Service, or other federal and state public-lands agencies in the United States or Mexico. In fact, the only listing that ever approached THE GRAND CANON in size and content was the *Greater Yellowstone Bibliography (GYB)*, an online database containing "over 28,900" citations hosted by the University of Wyoming

<sup>&</sup>lt;sup>15</sup> Bibliography of books, government reports, and magazine articles on Grand Canyon National Park. From: Report of the Director of the National Park Service. In: Reports of the U.S. Department of the Interior for the fiscal year ended June 30, 1919. Volume I. U.S. Government Printing Office (Washington, D.C., 1919), pp. 1256-1260.

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

Libraries, which lasted only for a decade or so. The content, structure, means of access, and utility of the Yellowstone production differed greatly from THE GRAND CANON, too; nor was it accessible as a single document. A "Yellowstone Database", restricted to scientific literature, was for years posted to the Washington State University website, containing "about 14,060 references".

THE GRAND CANON is unique. It is a documentary and research tool for administrators, for scholars like historians, scientists, and biographers, and for those who have avocational interests in this region. That it embraces now six different centuries, 16th to 21st, testifies to a long play of human affairs. This bibliography accounts for work and commentary that has been published, of course, but it goes further by recording citations as precisely as possible. This resolves the kinds of ambiguity that come from mis-citations, foreshortened citations in print, and other misunderstood, misquoted or misused information. It serves also as a base upon which new, extended, and selective resources can be built.

The 16th to 18th centuries in this region recorded human interactions in a geographically far-flung but sparse field of publications, focused on the lower Colorado River, produced by international parties with interests in the region. The 19th century saw the first sponsored explorers in three centuries spanning the region, discovering again the Grand Canyon. Later in the century came an inflow of scenery entrepreneurs, and scenic and cultural investigators among geologists and geographers, archaeologists and ethnographers, biologists and nascent ecologists—and a few permanent residents and curious, hardy travelers, who were the harbingers of throngs of tourists. The 20th century bore the infusion of larger permanent and transient populaces, and all manner of specialized researchers mostly in the humanities and sciences. Plans for, and partial implementation

6, 2021); and the overall site is no longer accessible (16 June 2024). GYB had contained nearly 29,000 citations, though as a database it was not in any way visible as a contiguous, browsable whole. When it was last accessed it had not been updated in more than a decade. Since then, THE GRAND CANON has grown by tens of thousands of citations.

<sup>16</sup>The First Edition of THE GRAND CANON (2012, pp. 298-299) included a detailed comparison of the

two bibliographies. That analysis is reproduced with emended remarks in the Essays section herein (Comparable Bibliographical Productions for U.S. National Park Service Units). GYB was last accessed by the author at http://www-lib.uwyo.edu/db/ynp/ (1 April 2012), but when revisited 28 May 2013 it was not found, nor has it been replaced anywhere on the University of Wyoming Libraries website, or elsewhere. In 2021, the URL for the Yellowstone work was https://libsierraapp.uwyo.edu/record=b3009633~S1 but the search link on that page bad link (accessed June

<sup>&</sup>lt;sup>17</sup> http://refbase.wsulibs.wsu.edu/yellowstone/index.php (accessed 1 January 2019; no longer accessible, 16 June 2024). Queries to the database retrieve summary lists of pertinent publications, but to view bibliographical information one must use a hyperlink to view each individual citation, one by one. Search links on the library's page imply that there may be material that had been very recently added; these links, though, are standard links for searches in this library. For the Yellowstone Database, there are no further additions after 2010.

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

of, a series of dams throughout the Colorado River basin brought beneficial and damaging effects to culture, environment, and administrative practices—not to overlook the positive and negative effects on the quality of life in general, including tourism, the irrigation of farms, potable water supplies, and the safeguards for air quality and silence to mention just a few aspects. Thus far focuses in the 21st century have generally shifted away from large-scale investigations to specialized, often short-term projects and, in the areas of water-management, increasing concerns over drought, climate change, and water apportionment.

Predictably and unpredictably, what happens in one part of the region affects something in another. For example, were it not for the tremendous efforts to irrigate farms in the American Southwest beginning in the late 1800s, implementing flood control in the lower Colorado River and realizing growing needs for widespread electrification in the 20th century, the drive during the mid-1900s to build dams that promised to flood the inner Grand Canyon was devastated by the power of public opinion. To these one may add many poorly organized plans and dreams from the turn to the 20th century, which proposed relatively meager power-producing dams for areas inside the Grand Canyon, including Diamond Creek, Havasu Creek, and Bright Angel Creek. And more recently were the aborted plans to create power-producing dams and facilities in the lowermost portion of the Little Colorado River, in the Big Canyon area of the Navajo Nation, immediately adjacent to Grand Canyon National Park. Historical cause and effect is of course retrospect; the concept applies likewise to any region in the country or in the world. But overarching, current, multidisciplinary bibliographical accounts for specific areas are scarce, thus there is an argument for saying THE GRAND CANON occupies a unique utilitarian position within its scope of political and physical geography.

While activities and natural occurrences in the upper basin of the Colorado–Green Rivers of Utah–Colorado–Wyoming have clear impacts upon the lower basin and the greater Grand Canyon region, THE GRAND CANON judiciously excludes that northerly part of the Colorado Plateau due only to my limitations of time, experiences and learning. Except in the area of water management and its thicket of legislative, legal, environmental, and cultural entanglements, the exclusion of the upper basin from THE GRAND CANON does not detract from the utilitarian value of the work. Even so, many of the water-management works that are cited do by their nature embrace the entire Colorado River basin, yet such publications are cited because they embrace the lower basin, too.

Inasmuch as new citations continue to be added to this document—publications finished years ago as well as new ones—it is a work never finished, never absolutely comprehensive. Its strides toward comprehensiveness are made because it is a product that cannot anticipate what will be of interest or use to any user, today or a century or more from now. Louise Hinchliffe observed in the 1990 edition of this bibliography that it

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

must include both "treasures and trash". It is my personal experience, as a researcher, as a librarian and archivist, and as an administrator, that once the assumption is made to discard "routine" or "redundant" items of research materials—those having no enduring "useful reference purpose" or that will not be relevant to most anticipated kinds of queries—will soon enough be *precisely* the kinds of works called for by someone. And even things that may normally be deemed to be "out of scope" to a researcher's current inquiry may turn out to have unexpected application in another project. So for them as well as for overarching administrative needs THE GRAND CANON is definitive. And administratively, having such a resource in hand is a documentary support point in formal requests for funding, to itemize accomplishments, for establishing work assignments, and for project challenges.

The burden of determining what is useful resides with the user. But what is available to the user is a decision that sits with those who have custody of that material. The custodians also must establish what is fiduciarily effective and responsible in accordance with an agency's official responsibilities or institution's mission, which purposes lie with the current administration that oversees the custodians. While this breakdown of perspectives and responsibilities are pragmatic, there are bound to be some aspects that fail the needs or expectations of one party or another. In any case, what is practical to keep or maintain may be at odds with what is useful to some potential users.

In the case of a reference work like THE GRAND CANON, preserving the intellectual asset contained therein is the same as respecting "collective memory". Admittedly, some titles cited in this bibliography may be in scarce numbers and will be very difficult to locate if one needs to see a copy. (In a few instances, some cited works apparently survive as unique copies, even though more had once existed.) Nevertheless, the object of THE GRAND CANON is to provide a total accounting—a documentation of as many published things as can be found—regardless of rarity or convenience of access. This is meant to be, item by item, a definitive listing for scholars, administrators, and general users for any reasons they may have to use it.

**SUMMARY** In her foreword to the second edition of the *Bibliography of the Grand Canyon and Lower Colorado River* (1990), Grand Canyon National Park librarian Louise Hinchliffe (1922–2016) observed, "while a librarian's budget or biases may limit accessions to 'worthwhile' books, the conscientious bibliographer must record impartially both treasures and trash, the enduring and the ephemeral". Many bibliographies offer up things that are "worthwhile", of course. For example, within the scope of this bibliography there are Francis P. Farquhar's classic 1953 *The Books of the Colorado River and the Grand Canyon* and its half-century sequel by Mike S. Ford, *The Books of the Grand Canyon, the Colorado* 

#### PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

River, the Green River and the Colorado Plateau, 1953-2003. Both of them are "selective" bibliographies, which together fill out the primary reference and want lists of librarians and collectors. Together they serve as a critical list of significant and, if not so significant, particularly interesting publications in the field—each, though, reflects the biases of its compiler.

THE GRAND CANON lists everything. It offers categorized lists with which librarians, managers and collectors may fill out comprehensive reference collections, in whole or within specifically defined areas. It serves users who pursue any number of specialized, even personalized, lines of inquiry, whose research requires a broader compilation of sources that is not limited to those that may be high-profile, accessible and familiar. So THE GRAND CANON sails through the archipelago of articles, newsletters, pamphlets, booklets, and even obscure monographs of all kinds. As it sounds it listens for dozens of languages. It also finds literary inlets adrift with annoying flotsam. This is a biblioscape more familiar to the users of interlibrary loans and photocopy requests—students, researchers, legislators, and legal aides—which is also the special domain of independent searches, fresh insights, novel interpretations, and fodder for theses and dissertations of the next generations of historical, scientific, social, and cultural scholars. This vast grouping of materials also offers to administrative officers a broad historical look at the depth of interest and issues that concern the areas they oversee, not just the few shining stars. THE GRAND CANON surveys the main currents of literature, science, and administration, and reveals the undercurrents of activities, perceptions, reactions, and opinions of citizens, constituents, clients, and consumers.

Occasional items other than the "worthwhile" titles are from among the "flotsam" of limited-distribution "gray literature" and mass-market and throw-away copies, and those items that might be considered too trivial, worthless, ridiculous, or temporary. These may nonetheless be key to a user's search for pertinent sources of information or for perspectives on peculiar topics. For academics and general readers both, commonplace and serendipitously found works can open new avenues of investigation, or bring attention to something for a future line of investigation. For administrators of the public lands, the broadly important and the particular or obscure items all may help consolidate ideas of how the areas of their oversight are perceived and used by the very people and organizations that utilize these administrators' lands.

THE GRAND CANON serves readers and administrators as a tangible record—an audit—of published materials about the Grand Canyon and the lower Colorado River. It is a resource with worldwide input on one geographical region, with the broadest possible span of private and public interests. It is the evidentiary and cultural record of incidental, casual, spontaneous, elective, creative, sponsored, and officially authorized activities of

PURPOSE, ADMINISTRATIVE CONTEXT, AND UTILITY OF THIS WORK

individuals, organizations, institutions and government agencies, published privately and in popular, academic, commercial and government venues. It is a record of perspectives, understandings and actions that pertain to cultural, environmental, literary, and administrative viewpoints of personal and societal interests. The citations document for agency decision-makers sources that record resources and the utilization of the lands under their purview. Trends in personal, professional and official interests may be detected in analyzing citations spanning decades and centuries. Subsets of citations may serve as foundations for specialized and applied uses, scholarly studies, and administrative record.

### COVERAGE AND FORMAT OF THE BIBLIOGRAPHY

(THE GRAND CANON Volume 1/Part B)

ONE DOES NOT just simply transcribe citations for a bibliography—although that is just how THE GRAND CANON began in 1974, simplistically, on 4-by-6-inch, mostly handwritten, index cards. Evaluation, editing, and commentary eventually rule the process; revision and reformatting are made to convey essential information, added perspectives, and clarifications.

Each citation in THE GRAND CANON is a receptacle for at least one fact regarding the Grand Canyon or the lower Colorado River regions—even for works of fiction because the "facts" therein are the characters and scenarios of an author's creative work. Every citation documents a person's—or many persons'—work to describe, interpret, or imagine the things that have contributed to a publication, whether to inform, enlighten, or entertain. In sum the citations are a whole image of human experiences, activities and uses; elements of the natural world; and spiritual, emotional, analytical and critical responses through the activities of professions, avocations, and livelihoods. One user may object that within THE GRAND CANON there are citations that are superfluous, but to another reader attending to a task particular to them at that time, some of those "superfluous" citations may provide just the documentation they seek, or may expose something useful about which they had no idea.

In the Grand canon the term "publication" is very broadly defined. Rather than refering to products run off on a press or otherwise produced usually for broad distribution, they include publicly available documents that never were meant for wide distribution; most notably, that genre of publication called "gray literature". To these are added theses and dissertations, which although not distributed as publications they have been made available through academic libaries and are widely accessible, once through microfilm reproductions, many of them now on public websites; they are frequently cited, too. All of these kinds of technically "unpublished" and "non-conventional" productions still are used and cited by researchers and other interested parties and are a part of the bibliographical heritage expressed by this bibliography. They are part of the historical record of work in, and attention to, the regions covered by the bibliography.

#### COVERAGE AND FORMAT

The descriptive and explanatory sections that follow are intentionally detailed. They serve as a documentary record of how THE GRAND CANON is arranged and comprise a helpful introduction for those who may be interested in understanding more about the craft of bibliography.

#### **TOPICAL COVERAGE**

A BIBLIOGRAPHY includes whatever its compilers wish to include. Francis Farquhar's 1953 gem, The Books of the Colorado River and the Grand Canyon: A Selective Bibliography is a celebrity title among bibliophiles of the Southwest, at least those who admire the Colorado River. There really is no such thing as a "selective bibliography", though, just a purposefully incomplete one. Indeed, such works may be criticized as "poor excuse[s] for selecting other scholars out." 18 Nonetheless, one should bear in mind the geographical realm of coverage in THE GRAND CANON; this is not a bibliography of all works by the authors listed in the bibliography. Some users may critize that one important work or another by an author is not cited. A work is listed only if it mentions or embraces, even in small part, the geographic region attended to by this bibliography—the Grand Canyon and lower Colorado River and the areas bounding them. If the work does not touch on these areas, it is not listed, regardless of the prominence of the author, the worth of the work, or its otherwise obvious applicability to studies of the region without actually referring to these areas. Each cited work must embrace some part of the geographical range of this bibliography. Temporally, I have restricted citations from periodicals to those that appear no more frequently than a week. Exceptions are *The New York Times* (which comprises its own part within this bibliography, Part 3), and pertinent citations that appear in the daily Federal *Register* (U.S. National Archives and Records Administration, Office of the Federal Register).

We have only to blame ourselves and centuries of forebears for the number and kinds of things cited in this bibliography: books, articles, whole periodicals, excerpts, abstracts, pamphlets, translations, atlases, maps, records, CDs, DVDs, films, videos, published separate photographs—not to overlook the products of lectures, reading circles, authors' and publishers' book promotions, travel agency literature, and the personally produced works of just plain dedicated enthusiasts. All are the main instruments of the spread of information on the Grand Canyon and Colorado River.

This bibliography began in 1974 simply enough: a short list on the subject of Grand Canyon geology. Now it is what you see. My decision to exclude the upper Colorado River basin is based entirely on my personal preferences, which expose the limits of my experience. I know far less of the Upper Basin; moreover, I have not traveled as much there. I have traveled throughout Arizona, along the lower Colorado River too, venturing into the Colorado Desert. My seventeen trips on the Colorado River through Grand Canyon, between 1989 and 2001 (all but two through to Lake Mead, the others out at Diamond Creek), pale against the tallies of those who are boatmen and scientist-workers on the river, but at least now I am comfortable with recollections and references to specific places

<sup>&</sup>lt;sup>18</sup> Alfred Runte, [Review of] Rebecca Bedell, "The Anatomy of Nature: Geology and American Landscape Painting, 1825-1875", *Isis*, Vol. 93, no. 4 (December 2002), p. 745.

#### COVERAGE AND FORMAT

in the river corridor. The same applies to some backcountry locales in the canyon and nooks along the lower Colorado.

The topical coverage in THE GRAND CANON is nearly without bounds. Books, articles, and other items wholly about these subjects are of course the mainstay of this work; but it also embraces those items that contain a snippet merely of passing interest. All make their ways into this bibliography. The absolute criterion is that they must in some way make mention of the Grand Canyon or the lower Colorado River, in any context, however brief—although it must have a contextual link to the region, and not, for example, just including Grand Canyon in a list of places run through in a discussion of something. So this is in fact partly a bibliography of subject-specific items and partly an index to publications containing notes on the Grand Canyon–Colorado River country.

I have observed and preached for years that one cannot presuppose what is "most useful" to the user of a reference work such as this. This means that everything is added without regard to an artificial evaluation of either scholarly or literary merit. I do not feel that it is the purpose of *this* bibliography to be selective, because an item may prove to be of value—even for reasons unknown or unimagined—to someone in the future. This even includes minutia that some people may prefer to call detritus. Among them are hundreds of "news notes" and "filler" that in fact trace goings-on that may not be published elsewhere, or which may even be republished in various venues, sometimes identically, sometimes not. But together these are a historical record; and just as often they may document the activies of individuals or organizations (for example, notices of lectures).

This approach is not wholly without broader conceptual omissions; take as an example, *Footprints of Hopi History*. <sup>19</sup> While each separately authored chapter has *application* to the theme of THE GRAND CANON, particularly with regard to Hopi philosophy and perspectives, not every chapter invokes the *place* of Grand Canyon and its immediate environs. (This is not to be confused with the intellectual knowledge conveyed by such publications about ethnobotanical and archaeological work conducted in the region, but pertains to the cultural knowledge understood through oral traditions and by *living* the life in which they are understood and communicated.) Omitting the applied works that embrace the intangible knowledge without mentioning the places in the publications counters the Hopi idea of footprints—*kuveni*—so THE GRAND CANON fails to distinguish these publications that otherwise include cultural oversights and histories embedded in the landscape. But for many users of this bibliography the concept of non-place applications take the bibliography too far afield from its conceptutal boundaries as defined by its table of contents and mission. This is not to displace the importance of the traditional knowledge

<sup>&</sup>lt;sup>19</sup> Leigh J. Kuwanwisiwma, T. J. Ferguson, and Chip Colwell (eds.), *Footprints of Hopi history : Hopihiniwtiput kukveni'at* (University of Arizona Press, Tucson, 2018), 274 pp.

#### COVERAGE AND FORMAT

of Indigenous peoples, but it is beyond my station to interpret in publications what *is* part of these people's footprints and Grand Canyon without myself having the traditional knowledge to understand it. Capturing those kinds of citations for the use of others will have to be a bibliographical journey for someone who does hold such knowledge.

The categories of this bibliography have evolved ever since work began around 1975 on broadening the original 1974 geology bibliography into its ever-more expanded versions (it was at the beginning restricted to geology). Similarly, the print editions of the bibliography, first in 1981, had employed arrangements that differ from those of later editions, including THE GRAND CANON. (See the Appendices to Part 1 of the bibliography for a complete description of the arrangement of the previous editions.) The selection of categories is partly routine (history, sciences, and so forth), and partly from the suggestions made by others (health and safety, and reviews, for example). The bibliography also includes documents that once had been denoted as "classified", "restricted" or "secret" for purposes of national security, but which were reclassified for public release. Only then are these and comparably secured documents included in this bibliography; they are pertinently noted.

There are an undetermined number of citations in THE GRAND CANON (probably more than a thousand) that are listed in more than one part, due to their overlapping subjects. <sup>20</sup> A geological work by its content that pertains both to the Grand Canyon region and the lower Colorado River will be listed in Parts 11 and 21 of this bibliography. Similarly, a work that deals with both geological and archaeological aspects of a certain locale will be listed in Parts 16 and 21 of the bibliography. Or, fisheries studies of the Colorado River that include both the Grand Canyon and lower Colorado River regions will be cited in Parts 11 and 19. While this inflates the total "number of citations", it serves those who will study and extract only from certain parts of the bibliography, ignoring the other parts. Compared to the tens of thousands of citations, the number of replicated entries is estimated to be between one and two thousand, perhaps on the lower end.

It is nevertheless impossible to ensure that every topical component of a broadly scoped work is listed under all topics that are included in it. For example, Richard Felger's *Flora of the Gran Desierto and Río Colorado of Northwestern Mexico* (University of Arizona Press, 2000) is cited with natural history publications in Part 11, Section 1. However, it

For example, the report by Richard Hereford, Glenn E. Bennett, and Helen C. Fairly, "Precipitation variability of the Grand Canyon region, 1893 through 2009, and its implications for studying effects of gullying of Holocene terraces and associated archeological sites in the Grand Canyon, Arizona" (U.S. Geological Survey, Open-File Report 2014-1006, 2014), is listed in this bibliography in Parts 16 (ARCHAEOLOGY), 18 (PHYSICAL ENVIRONMENT), and 21 (GEOLOGY). There are a very small number of citations that are cited across even more parts of the bibliography. The actual number of replicate citations in this bibliography is undetermined.

#### COVERAGE AND FORMAT

contains extensive introductory material that addresses not only botany and ecology but past and present climates, geology and hydrology (as influencing major habitats), history, human influences including those of Indigenous peoples, and agriculture. Many works thus might be more properly cross-indexed by subject in a database, but within this monographic bibliography it would be a practice that would make the overall work misleadingly and unhelpfully enlarged.

Some users may notice the absence of some publications. These omissions are usually not purposeful exclusions. Occasionally, too, there is a title that a user may think belongs here for good reason that it may relate to a nearby region or events there. However, if it does not touch upon either the Grand Canyon, its immediately adjacent lands, or the broad corridor of the lower Colorado River, it will not be included in THE GRAND CANON. Still, the extent of bibliographical explorations by me and contributors go only so far. If something is not cited, and it clearly should be, we had not seen it; we have not chosen to omit it. Users who know of more things that should be listed here have the advantage over us.

Material that appears in periodically published regional tourists' guides is selected. Often the texts are repeated from one season, and from one year, to the next; repeating them in the bibliography, especially in significant numbers, is not necessarily helpful. Thus, a representative sampling is included in the bibliography. If an item stands out from others that are usually repeated, or if their eye-catching titles differ greatly between installments, they will be cited as examples of editorial style and the editors' intention to refocus the article's interest for the visitor. More specifically, from the *Grand Canyon Tusayan Guide* (and variant titles) and the affiliated *Williams* guide that also includes Grand Canyon and Tusayan, both published by the Williams-Grand Canyon News, all general items are included in PART 2 (General Publications), rather than mixing them between this part and Part 9 (Travel Guides). This was done because the contexts and content of individual items are so closely interrelated that they could be listed in either part, or both, probably to even greater distraction to those who are browsing this bibliography. I feel that it is more beneficial to keep these frequently addressed, selected, items together.

Material that many users would consider "fiction" are nevertheless categorized in this bibliography under the subject areas to which they putatively pertain. Material regarding unidentified flying objects (UFOs) and subjects such as alien "bases" in the Grand Canyon are listed in PART 2. Material about putative ancient Egyptian relics in the canyon are listed in PART 16 (Archaeology). And material pertaining to creationist and "young-earth" interpretations of Grand Canyon geology are listed in PART 21 (Geology and Paleontology).

#### COVERAGE AND FORMAT

Finally, Parts 2, 7, 9, 26, 28, and 30 of the bibliography include items that contain potentially offensive material, with sexual or other matter that some users, for religious, moral, or personal reasons, may not wish to encounter. These are grouped in supplements to each part. It is additionally important to segregate these citations as this is an internationally focused bibliography with an international audience, whose particular perspectives may not be known to this compiler. (Off-color language is not considered reason for segregation.) The cited items themselves may contain explicit material but a few of them do not; yet these, too, are segregated because the serials in which they appear do contain such matter. Bearing in mind the specific reasons that some users may have to avoid or overlook such material, each of the supplements is clearly marked. (Material that has been produced specifically as pornographic has not been gathered for this bibliography.)

TO SUMMARIZE HERE, the subject areas of the bibliography are as follows:

- BIBLIOGRAPHIES, INDICES, AND COMPARABLE PUBLICATIONS FOR THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS: PART 1 is a guide to other bibliographies, indices, and similar guides to published materials about the Grand Canyon and lower Colorado River regions. The opportunity is also taken to include an Appendix to Part 1, which outlines the changing content arrangement of the Grand Canyon–Lower Colorado River bibliography from 1981 to the present.
- GENERAL PUBLICATIONS (HISTORICAL, GEOGRAPHICAL, SOCIAL, CULTURAL, BIOGRAPHICAL, POPULAR, AND COMMONPLACE WORKS CONCERNING THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS): PART 2 is by far the largest part of this work; nearly a third of the bibliography. It includes everything that is not categorized by other parts of the bibliography; most notably, everything that is classified as history, geography or biography. It embraces popular and scholarly productions. Part 2 includes everything from commonplace (or "casual") items and notes on the fly, to lengthy monographs.

A great many publications include both the Grand Canyon *and* the lower Colorado River; others pertain to the lower Colorado River alone. It is impractical to list "Grand Canyon" and "Lower Colorado River" items separately because of the huge overlap. Instead, what I have done in Part 2 is to specially mark those citations that pertain solely to the lower Colorado region; these citations are identified by their Item numbers in *colored italics* (for example, *2.13255*).<sup>21</sup>

<sup>&</sup>lt;sup>21</sup> Colored italics are used for aesthetic and pragmatic reasons; color to stand out more on the page, italics in the event that a page in this bibliography is reproduced without the benefit of color, thus the

#### COVERAGE AND FORMAT

Part 2 includes most items that, in previous bibliographies, had been heaped into a "Miscellaneous" part that was an arbitrary and unhelpful category inasmuch as such wayward items are as "general' as they are "miscellaneous". Part 2 accommodates as well things that relate to, but are not categorized with, material in other parts of the bibliography. For example, it includes publications that pertain to modern social issues of the regions that otherwise are accommodated for their respective parts of the bibliography—such as Part 11, which embraces scientific and technical issues of the lower Colorado River region, but for which issues relating to modern social conditions would be out of place. (Examples include the social concerns that pertaining to Indigenous peoples of this region, and social and labor issues in the Imperial Valley.)

• THE NEW YORK TIMES (GRAND CANYON AND LOWER COLORADO RIVER ARTICLES AND REPORTS FROM 1851 TO PRESENT): PART 3 embraces the entire run of *The New York Times*, from 1851, for the reason that this widely accessible newspaper (first on microfilm, now online) includes every aspect of Grand Canyon and Colorado River history dating to the first American expedition into the region in 1851 (the Sitgreaves expedition). Originally these citations were included as an assist to those researchers who needed to consult microfilm copies, which are widely distributed. Now that the *Times* is available online in searchable formats, researchers are less encumbered by issues of access; but for continuity the citations are continued forward to the present.

Part 3 is divided into two sections. The first is a comprehensive chronological listing of all citations from the *Times*; second is an alphabetical list of citations for articles that have an author's by-line.

- MEMORIALS: PART 4 contains citations for obituaries and similar contemporary notices about men and women who were in some fashion a part of Grand Canyon and lower Colorado River history, or who died in these places. This part is divided into two sections; the first lists citations by author name, the second groups citations under the names of the decendents. Conventional biographical publications are consolidated with Part 2 of the bibliography.
- **PUBLICATIONS FOR PEOPLE WITH DISABILITIES**: PART 5 contains four sections. **Section**1: Publications produced especially for the blind and vision-impaired. This section contains citations mostly for items that are in large-print or Braille formats and audio materials made expressly by agencies who produce materials for the blind and vision-impaired. Other, unusual formats are included, too; for example, tactile material in Moon Type. Many citations have been derived from Library of Congress catalogue records, and of course this

# COVERAGE AND FORMAT

part of the bibliography should not be construed to be comprehensive because there are likely to be many products for this audience that are not in accessible catalogs. **Section 2**: Conventional publications that relate to the experiences of or information of interest to the blind and vision-impaired. **Section 3**: Publications that relate to people with hearing impairments. **Section 4**: Publications that relate to people with mobility or activity impairments. Sections 2–4 mostly repeat citations that are included in other parts of the bibliography.

• **PUBLICATIONS FOR AND BY YOUTH AND YOUNG ADULTS**: PART 6 contains citations for material produced for younger audiences, which includes some material written by young authors. This includes school students through the high-school years. Traditionally this is material classified as "juvenile". This part is divided into two sections; **Section 1** for non-fiction and **Section 2** for fiction.

"Graphic novels", once known just as "comic books", were chiefly for young-reader audiences. In more recent time the genre has evolved to include graphic novels produced for adult audiences. These distinctly newer productions, with themes for more mature readers, are relegated in this bibliography to Part 7. Fiction. Even the "comic book" market of productions originally for younger readers has also evolved to embrace readers of post-adolescent ages, as the attendance at "comic book" conventions and similar events testifies, even though this is driven more by the collectibles market. Nonetheless, following convention implicit young-reader titles (for (example, *Superman* or *Justice League of America*) remain listed in Part 6, Section 2 of this bibliography.

- FICTION: PART 7 contains all works of fiction that are not deemed to be directed to the young-reader audience.
- VERSE: PART 8 lists items that are poetry and verse about places or experiences in the Grand Canyon and lower Colorado River regions.
- TRAVEL AND TRAIL GUIDES: PART 9 lists material that is explicitly guide information to travel in the region; that is, publications that include information on access, accommodations, and such. These include trail guides, but guides to the Colorado River are relagated to Part 10 of the bibliography. Material that is of a general nature, such as essays on travel experiences, are cited in Part 2 of the bibliography.
- COLORADO RIVER GUIDES: PART 10 lists items that are specifically guides to the Colorado River.

#### COVERAGE AND FORMAT

• SEPARATE-COVERAGE GROUP: SPECIALIZED MATERIAL ABOUT THE LOWER COLORADO RIVER REGION (BELOW GRAND CANYON) [PARTS 11 AND 12]: The lower Colorado River is defined in this bibliography as that region between Grand Canyon and the Gulf of California, including the areas of the Salton Sea and the Imperial and Mexicali Valleys in California and Baja California.

The reason that Parts 11 and 12 now comprise a separate-coverage group is that in the 2000 redesign of the bibliography these parts represented an outgrowth of a single "Lower Colorado River" part of the earlier print bibliographies. Since then, Parts 11 and 12 have grown substantially and have been subdivided into thematic sections; and it is not practical to redesign the bibliography to accommodate this special group on its own.

Although it might not seem necessary to include the marine environment of the Gulf of California, its northern end has for millennia been influenced by the outflow of the Colorado River, flush with the mighty, silt- and sand-laden torrents from the continental interior, perhaps at times influenced by the formation of geologically temporary lakes enroute—and, today, absolutely and contemptuously impacted by the complete cessation of river flow, every last drop shunted off to farms and cities, which has had impacts on the environment of the northern gulf. Geologically, the tectonic structure of the gulf is in fact a part of the Salton Trough region; and again, to separate the northern gulf from the lower Colorado is impossible.

PART 11 (Lower Colorado River—Natural History, Environment and Special Scientific, Technical, or Cultural Issues) and PART 12 (Lower Colorado River—Water Supply, Management and Policy Issues of the Lower Colorado River, including infrastructural projects along the Colorado River from lower Glen Canyon, Arizona, to Mexico) are purposely separated from the Grand Canyon focus of this bibliography to facilitate a more sensible breakdown for those users who may be interested only in the special issues of the lower Colorado River region.

To create a separate, *comprehensive* bibliography for the lower Colorado River region by itself would require that thousands of citations also be copied from Part 2 (General Publications). Duplication of citations on such a scale would seriously, unnecessarily, inflate the bibliography. Thus I have deemed it most effective to separate the "general" publications about the lower Colorado from the more technical publications, to suit distinctly different groups of users.

Users of Parts 11 and 12 of the bibliography will realize there is a very large number of items that constitute "gray literature",<sup>22</sup> specialized publications of usually very limited

60

<sup>&</sup>lt;sup>22</sup> For more on this topic with respect to this bibliography, see the commentary on <u>gray literature</u> herein.

#### COVERAGE AND FORMAT

distribution, often created by governmental agencies or contractors working for those agencies. Similarly, theses and dissertations written as part of an individual's work toward an academic degree are generally "unpublished", yet they are important contributions to their subjects and are in fact available online, through microform, or in hard copy through University Microfilms. While online library catalogs such as WorldCat are quite helpful today in locating some of these documents, many more may have never been cataloged into these systems; many cited in THE GRAND CANON were found through conventional searches on the web.

Certain specialized areas, such as geothermal energy and related investigations may be found in online sources devoted to these areas; for example, the International Geothermal Association's "Geothermal Conference Paper Database", online at:

http://www.geothermal-

energy.org/publications and services/conference paper database.html.

The U.S. Department of Energy's Office of Scientific and Technical Information likewise has a comprehensive database, SciTech Connect, which consolidates the contents of OSTI's Information Bridge and Energy Citations Database; this is accessible online at <a href="http://www.osti.gov/scitech/">http://www.osti.gov/scitech/</a>.

# Part 11 (Environment, Natural History, and Special Scientific, Technical, or Cultural Issues of the Lower Colorado River Region, with Guides to U.S. and Mexican Topographic Quadrangles)

As indicated in the title for Part 11, this part embraces mostly scientifically and technically oriented material. For the sake of convenience to researchers working within disparate fields of study, Part 11 is now subdivided into three separate sections: **Section 1**— Environment, Ecology, Biology, and Public Health and Safety. **Section 2**—Geology, Paleontology, Hydrology, and Related Disciplines; **Section 2A**—Separately Published Geologic and Special Maps. **Section 3**—Archaeology, Native American Culture and Issues, and Contemporary Cultural Resources and Preservation. (Note, however, that publications relating to 20th and 21st century social or socioeconomic conditions of this region are consolidated with Part 2 (General Publications) due to their historical perspectives.) Further topical breakdown of Part 11, such as to mirror all the various parts of the bibliography, would be too distracting. **Section 3A** provides a "General Guide to Documentation for Places in the Lower Colorado River Region Listed in or Nominated to the *National Register of Historic Places* and the *National Historic Landmark System* Administered by the U.S. National Park Service.

Regarding Section 1, I have enlarged the geographic coverage of this bibliography to embrace the environmentally protected areas at the northern end of the Gulf of California. With regard to the marine faunas there, the environmental changes caused by the effective

#### COVERAGE AND FORMAT

cessation of Colorado River flows into the gulf, and the effects of fishing activities, intertwine to such a degree that it is imperative to cite publications that relate to these areas and subjects.

Regarding Section 2, I likewise enlarge the geographic coverage of the bibliography to embrace the regional geological influences expressed in the upper Gulf of California and the Colorado River delta region generally.

Regarding Section 3, the lower Colorado River region hosts Indigenous peoples who have traditional and legislatively administered lands in the U.S. and Mexico. Most items in this bibliography that relate to them are listed in this section. These Indigenous groups and their reserved lands are:

Moapa River Indian Tribe, Moapa River Indian Reservation (Nevada)

Fort Mojave Indian Tribe, Fort Mojave Indian Reservation (Arizona, California and Nevada)

Colorado River Indian Tribes (Chemehuevi, Hopi, Mohave, and Navajo), Colorado River Indian Reservation (Arizona and California)

Chemehuevi Indian Tribe of the Chemehuevi Reservation (California)

Quechan Indian Tribe, Fort Yuma Indian Reservation (Arizona and California)

Cocopah Indian Tribe, Cocopah Indian Reservation (Arizona)

Cabazon Band of Mission Indians, Cabazon Reservation (California)

Torres Martinez Desert Cahuilla Indians, Torres Martinez Reservation (California)

Cucapá (or Cocopa, *Xawill kwnchawaay*) (Baja California, México; traditional lands in the Río Colorado delta)

In addition, bands of the Southern Paiute people have traditional-use ranges within the northern part of the lower Colorado River region

Subjectively, I have not included probably thousands more citations that pertain only generally to agricultural issues in the lower Colorado River region. These would, in fact, best be the subject of a separate, specialized bibliography, which of course must be constructed from the start. Occasional agricultural items will be found in this bibliography, though. These are included for more specific focuses; for example, aspects of irrigation or taxonomic, ecological, or historical matters in the lower Colorado River region.

As for the peculiar appendage of the Salton Sea region, as also covered in this bibliography, were it not for natural breakouts of the Colorado River to the Salton Sink, the natural history of the lower Colorado River region would not be attached to this bibliography. The Salton Sink (and its historical ancient Lake Cahuilla) is as much a part of the Colorado River delta as that which sinks actually into the Gulf of California. Then, with the anthropogenic breakout of the river during 1905–1907, the whole Salton Sea region—and eventually the Imperial and Mexicali valleys—opened itself in every other respect to

# COVERAGE AND FORMAT

the coverage of this bibliography, in terms of geography, geology, and all aspects of human affairs, like engineering, agriculture, culture, and tourism. Thus while a periodic hydrogeologic event let this bibliography embrace the physical Salton Sink, an accident by hapless water managers also forced it to embrace lasting environmental effects and human activities in this region.

In the 4th Edition of The Grand Canon, the Appendix to Part 11 was removed and incorporated as Section 4B of Volume 2, *CARTOBIBLIOGRAPHY OF THE GRAND CANYON AND LOWER COLORADO RIVER REGION*. It provides guides to the quadrangle systems of topographic maps in the lower Colorado River region used by the U.S. Geological Survey and Mexico's Instituto Nacional de Estadística y Geografía and likewise for geological maps of the Servicio Geológico Mexicano.

# Part 12 (Water Supply, Management, and Policy; with Expanded Coverage for Basin-Wide Issues and Unrealized and Unrelated Infrastructural Projects) 23

Water—its abundance (or lack thereof) and its quality and uses—are the crucial concern of the world's people in the 21st century. In the American Southwest concerns will become as dire as any known in the civilized world, and will without partiality be just as humanly devastating as the shortages in villages of other continents; inevitably with geographical, economic, and political muddling. References in Part 12 of the bibliography will give some case examples of how we in the American Southwest got to the point of imbalancing climate, technology, and legislation—and our perspectives, however limited right now, on how to work with them.

The water-management citations in Part 12, Section 1 of the bibliography, restricted to the lower Colorado River corridor and its artificial extensions such as canals and powerlines, must by default embrace partly the Grand Canyon and some basin-wide issues. This is mostly due to the proposed construction of dams in the Grand Canyon, which ideas began with power-production facilities proposed for the Colorado at Diamond Creek in the closing years of the 1800s and in the heart of the canyon at the mouth of Bright Angel Creek in the early 1900s. Similar proposals continued for the entire Southwest through the damsurvey period (the 1920s mostly) and during which Hoover Dam was built in the 1930s, and which came famously to a head politically and civilly in the 1960s–1970s with proposals to build two power dams that would have bracketed Grand Canyon National Park (its boundaries were smaller then). Since the Bridge Canyon and Marble Canyon Dams were never constructed, a conundrum presented itself as to where in THE GRAND CANON to cite water-management citations that pertained to proposed facilities in Grand and Marble Canyons. Since these structures, though never realized, were a part of more ambitious

 $<sup>^{23}</sup>$  Refer also to the map at the beginning of Part 12.

#### COVERAGE AND FORMAT

plans covering the Southwest, I deemed it more sensible to include these citations in the water-management part of the bibliography for the lower Colorado River.

Regarding the water-management facilities of the lower Colorado River—principally Hoover Dam (Lake Mead), Davis Dam (Lake Mohave), Parker Dam (Lake Havasu), Imperial and Laguna Dams (Lake Martinez), and Morelos Dam (diversion structure for Mexico)—most citations in THE GRAND CANON pertain to the dams and their appurtenant works as well as to administrative aspects of the lakes impounded by them. In the case of Hoover Dam and Lake Mead, a substantial number of citations relate to them; fewer for dams and lakes farther downstream, largely due to the frequent recognition of Hoover Dam in history, engineering, and water management policy. Appurtenant works include, for example, power-production facilities and specialized construction facilities during the building and operating phases.

Productions of cultural resource documentation of significant water-management sites and projects, conducted by the U.S. National Park Service's Historical American Engineering Record, are relegated to Part 11, Section 3 of this bibliography; specifically to citations under "U.S. National Park Service, Historical American Engineering Record" in that section.

Aqueducts and irrigation canalworks in the lower Colorado River region are also covered in Part 12. But no special attempt has been made to provide comprehensive coverage because this material of course carries farther from the lower Colorado River region, where in those destinations there are sure to be a separate bibliography's worth of published material, though out of scope to this one. Items pertaining to the Central Arizona Project are cited in THE GRAND CANON only when they take note of operations at the Colorado River, or with reference to proposed supporting projects such as Marble Canyon Dam and Bridge Canyon Dam.

Bridges in the Grand Canyon and lower Colorado River regions—the most recently notable of which is the Mike O'Callaghan–Pat Tillman Memorial Bridge, or Hoover Dam Bypass between Arizona and Nevada, completed in 2010—along with other infrastructure that is not related to water-management facilities, are cited in a separate "ancillary coverage" section (Part 12, Section 2). Other bridges include the Navajo Bridges, Kaibab Bridge, and Silver Bridge, and spans on the lower Colorado linking Arizona and California. (Items relating to tramways across or on the sides of the Grand Canyon are relegated to Part 2. Items relating to the Navajo Nation's proposed Grand Canyon Escalade in the early 21st century are included in Part 17. Further omitted in this part are items that pertain to the reconstruction of London Bridge in Lake Havasu City, Arizona. This is a tourism destination that does not cross the Colorado River and has no contribution to the history of

# COVERAGE AND FORMAT

lower Colorado River infrastructural projects; thus, items pertaining to London Bridge will be found in Part 2.)

Also listed here are some documents related to Glen Canyon Dam, although the dam is otherwise extralimital to this bibliography. Certain other items that relate to the area, conditions and operation of Glen Canyon Dam, particularly as it affects the region downstream from it, will be found as appropriate in other categories, depending upon whether the subject is related to; for example, general interest (Part 2), administration (Part 13), physical environment (Part 18), biological ecology (Part 19). Construction projects outside the immediate Colorado River corridor are listed with items of general interest (Part 2). And general interest items pertaining to facilities constructed in the Colorado River corridor—such as social, tourism and political issues pertaining to Boulder City, Nevada, that are not related to the actual construction of Hoover Dam—will be found in Part 2.

Many items pertaining to the U.S. Geological Survey expedition (Birdseye Expedition) of 1923 on the Colorado River through Grand Canyon will be found in Part 2 (General Publications). This expedition principally examined potential sites for dams, but quite a lot of general and public interest was reported from and about this expedition. Only specifically technical items relating to the expedition are included in Part 12, Section 1.

Items pertaining to the plans for, construction of, and physical structure of Glen Canyon Dam, as well as items pertaining to Lake Powell impounded behind the dam, are not included in THE GRAND CANON. Exceptions are selected items that relate to effects downstream in the Colorado River as the result of physical alteration of the dam and its appurtenant works or from alterations to the operation of the dam.

The U.S. Reclamation Service (later U.S. Bureau of Reclamation) published the monthly *Reclamation Record* (later *New Reclamation Era* and *Reclamation Era*, in that order). These include monthly updates on the progress of work on the various reclamation projects (for example, the Yuma Project in Arizona and California). Citations for these monthly updates are *not* included in this bibliography, as users should be aware of these updates as a matter of course, and thus every issue should be examined for a period of time in which the user is interested. At first these reports were published only under the section heading; later, individual reports included by-lines.

Omitted from Part 12, Section 2, are items that relate to the survey for the Denver, Colorado Cañon & Pacific Railroad—the Stanton Expedition—of 1889–1890. It is historically more well known as a Colorado River boating expedition with a photographic record, with significant numbers of items written about it in that context. Never built, few published items relate to the technical details of engineering problems of the railroad; none (of course) to construction news. All citations regarding the Stanton Expedition will be found in Part 2.

# COVERAGE AND FORMAT

Items that rely on the historical series of photographs taken during this expedition in Grand Canyon will be found in different parts of the bibliography; for example, citations about general views in Part 2, comparative surveys of vegetation in Part 19 [BIOLOGY AND ECOLOGY], and comparative surveys of sedimentation along the Colorado River in Part 22 [HYDROGEOLOGY OF THE COLORADO RIVER].

• ADMINISTRATIVE AND MANAGEMENT ISSUES IN THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS: PART 13 of the bibliography relates to administrative issues at all levels, but each as it relates to some geographic or political area embraced by this bibliography. By and large these are government documents, but include public opinion and other publications about issues that pertain to legislative and management concerns. As many as possible of known administrative documents produced by or for federal and state units are listed in this part. However, with regard to legislative documents, such as those of the U.S. Congress and state legislatures, the citations in THE GRAND CANON should be seen as representative and opportunistic rather than an attempt to provide a definitive list. A comprehensive listing will necessarily have to be an exhausting, separate project.

As a pragmatic matter of bibliography all items relating to water-management in the lower Colorado River, including legislative and judicial actions regarding dams and other water-management infrastructure, and international treaties and agreements pertaining to these subjects (which might otherwise be relegated to Part 13 of this bibliography), are consolidated in Part 12, Section 1. An **exception** to this are productions of cultural resource documentation of significant water-management sites and projects, conducted by the U.S. National Park Service's Historical American Engineering Record, which are relegated to Part 11, Section 3 of this bibliography; specifically to citations in that section under "U.S. National Park Service, Historical American Engineering Record".

- SOCIOLOGY, RECREATION, EDUCATION, ECONOMICS, AND RELATED SUBJECTS IN THE GRAND CANYON-LAKE MEAD REGION: Part 14 of the bibliography relates to various aspects of human affairs except, specifically, health and safety issues, which are consolidated with Part 15. The Whale Foundation, a not-for-profit organization, provides services to the Grand Canyon river-guiding community that first included mental and physical health care but which now embraces various matters that relate to social and personal support, and a scholarlship. For the sake of convenience, citations for items produced by The Whale Foundation that are not specifically health related are grouped in Part 14.
- HEALTH AND SAFETY IN THE GRAND CANYON-LAKE MEAD REGION: PART 15 lists items relating to human health, safety, and public well-being in Grand Canyon National

#### COVERAGE AND FORMAT

Park and immediate vicinity. Because the waters of Lake Mead encroach upon the lower portion of Grand Canyon, for bibliographical convenience this part is expanded to include all items that relate to public health and safety in the Lake Mead region overall. Items pertaining to issues of workplace harassment are included in this part. Items pertaining to infrastructure that has direct bearing on the topics of health and safety are included. This part also includes documents on thereapeutic programs, mishaps, rescues, accident investigations, missing persons, and cautionary reports by example.

# • ARCHAEOLOGY AND CULTURAL RESOURCES IN THE GRAND CANYON REGION:

PART 16 of the bibliography relates to archaeology and to aspects of cultural resources including 19th- to 21st-century activities. Some items dated during and after the later-20th century may be available to the public only in redacted versions, wherein culturally sensitive or specific geographical data are omitted or physically obliterated. Unredacted versions will be in files accessible to qualified researchers and administrators. If no note regarding redacted parts appears with the document, or if there is no such note with its citation here, it does not necessarily mean that the document as seen or as available does not have data redacted. One may assume that modern publications in scholarly serials already have been written in such a fashion that sensitive or restricted data are left out. Documents or citations that may have been seen by the compilers that pertain to wholly restricted documents not available publicly are not cited in this bibliography. While thus not properly compiling the body of work of individuals, firms or agencies within the scope of this bibliography, the general unavailability of a document leaves no merit for inclusion within a work such as this one, which identifies publicly available materials.

Included in this part are pertinent U.S. National Park Service summary records for historic sites, which include the Historic American Buildings Survey (HABS), Historic American Engineering Record (HAER), and Historic American Landscapes Survey (HALS) series. Most of these are accessible online through the Library of Congress website. An Appendix to Part 16 provides a "General Guide to Documentation for Places in the Greater Grand Canyon Region Listed in or Nominated to the *National Register of Historic Places* and the *National Historic Landmark System* Administered by the U.S. National Park Service.

Archaeological work relating to the lower Colorado River region, including Lake Mead, will be found in Part 11, Section 3; and similarly that section will also contain pertinent HABS, HAER, and HALS reports.

• NATIVE AMERICANS IN THE GRAND CANYON REGION: PART 17 of the bibliography relates to Native Americans of, and their relation with, the Grand Canyon. By default of their residency at and in the canyon, the Havasupai and Hualapai people are the principal focus of this part of the bibliography; also the nearby Kaibab Band of Paiute Indians. In

#### COVERAGE AND FORMAT

addition, there are citations that relate in some fashion to the cultural relationships and claims that other tribes and nations have in the Grand Canyon. This is not a bibliographical listing for the tribes in general; only their relationships with the canyon, though more comprehensively regarding the currently resident Havasupai and Hualapai. Some topics that may seem to be out of scope, insofar as the tribal relationships with Grand Canyon are concerned, are nonetheless included here. For example, some citations relate to Havasupai legal claims against Arizona State University, which relate to the unsanctioned uses of blood samples that were given by tribal members to a university researcher specifically for research on diabetes in this community (a disease that disproportionately afflicts many of these people, and notably other tribal peoples as well). While this in itself may seem unrelated to the Grand Canyon, additional studies were conducted with the samples, without the permission or knowledge of those from whom the blood was taken. These other studies arrived at scientific conclusions and social statements, which were published, that are decidedly contrary to the cultural beliefs of the Havasupai people and their relationship with the Grand Canyon. The resolution of these legal issues has provided some positive outcome for the individuals and the tribe. Now the affair remains the subject of worldwide cautionary and instructive attention among bioethecists and legal scholars, citations about which are also included here. Many of these publications produced during the progress of the legal case and thus provide evolving perspectives of the issues prior to the final resolution between the tribal litigants and the university. The effects of this case further emphasize the weight and truth of cultural beliefs.

Ophelia Watahomigie-Corliss, a Havasupai woman who has been a strong defender of Havasupai culture, noted that "... culturally we are taught to never look back or live in the past."<sup>24</sup> While the idea of a bibliography may seem like a contradiction to such teachings, her belief does not necessarily mean that the past is not to be remembered, but that human life is meant to move ahead. A bibliography such as this one does document past interactions and activities, but it contributes to the learning that goes on in the present and prepares people and communities for the future.

Not all of the Native American tribes who exercise cultural claims to the Grand Canyon may have citations listed in THE GRAND CANON, except in a general or summary fashion; only the publications that have come to our attention, and which relate specifically to activities in the Grand Canyon region, are cited. The involved tribes (as defined by the federal government) are:

Ophelia Watahomigie-Corliss, "Rock Medicine", Colorado Plateau Advocate (Fall/Winter 2021), pp. 9-13.

#### COVERAGE AND FORMAT

Havasupai Tribe, Havasupai Reservation (Arizona)

Hopi Tribe (Arizona)

Hualapai Indian Tribe, Hualapai Reservation (Arizona)

Kaibab Band of Paiute Indians, Kaibab Indian Reservation (Arizona)

Las Vegas Band of Paiute Indians, Las Vegas Indian Colony (Nevada)

Moapa Band of Paiute Indians, Moapa River Indian Reservation (Nevada)

Navajo Nation (Arizona, New Mexico & Utah)

Paiute Indian Tribe of Utah

Cedar Band of Paiutes, Kanosh Band of Paiutes, Koosharem Band of Paiutes, Indian Peaks Band of Paiutes, and Shivwits Band of Paiutes

San Juan Southern Paiute Tribe (Arizona)

The Pueblo of Zuni, Zuni Reservation (New Mexico)

Yavapai-Apache Nation, Camp Verde Indian Reservation (Arizona)

An Appendix to Part 17 lists material that was published in *The Supai Weekly News* and *The Supai News*, 1957-1959, which was produced by missionaries.

Work relating to the Indigenous cultures of the lower Colorado River region, including Lake Mead, will be found in Part 11, Section 3.

# PHYSICAL ENVIRONMENT OF THE GRAND CANYON AND THE SOUTHWEST REGION :

PART 18 of the bibliography relates to the physical environment; that is, items of physical, chemical, biophysical, or biochemical aspects of land, water, and atmospheric environments of the Grand Canyon region. This includes multidisciplinary research of the environment in the Grand Canyon region and the Colorado River corridor through the Grand Canyon, and climatological and hydroclimatatological investigations relating to the Colorado River basin. With regard to the last subject area, it is necessary to expand the area of coverage to embrace the entire region covered by this bibliography and the American Southwest generally. This is because climatic investigations by nature often encompass rather large geographical regions. With regard to the area covered by this bibliography, many such investigations overlap the entire Colorado River drainage, or sometimes more specifically a portion of Arizona or the lower Colorado River region. In any case, all climatic studies, including those that cover the larger regions, are listed in this part of the bibliography for their topical context and the logical application of them to the artificially restricted area of the Grand Canyon and lower Colorado River.

• BIOLOGY AND ECOLOGY OF THE GRAND CANYON REGION: Part 19 This part includes documents on biological censuses and the biology and ecology of animal, plant, and protist organisms as occurring in the Grand Canyon region. This part also includes biological reports and studies that have been part of scientific investigations conducted for

# COVERAGE AND FORMAT

the purpose of environmental management of public lands in the Grand Canyon region. Also included here are general articles about information on organisms, resources and activities; for example, fishing, hunting, and conservation. Documents that are Environmental Impact Statements, and similar administrative and guidance documents, are included in Part 13 (Administrative and Management Issues) because they usually embrace multiple areas of administrative oversight, are not solely focused on ecological concerns as might be inferred from the title, and may offer a variety of management alternatives. Exceptions are those documents that are specifically or predominantly biological or ecological in perspective.

- GLEN CANYON ENVIRONMENTAL STUDIES PROGRAM: PART 20 comprises a guide to reports and studies that were produced as part of the Glen Canyon Environmental Studies program under the U.S. Bureau of Reclamation; since ceased under that administrative entity. (The GCES programmatic responsibilites have continued as a part of the U.S. Geological Survey's Grand Canyon Monitoring and Research Center, in Flagstaff, Arizona.) The program was implemented to study the effects of, and to contribute to administrative plans for, the operation of Glen Canyon Dam on the downstream environmental and cultural resources through lower Glen, Marble, and Grand Canyons. This part was compiled by Richard D. Quartaroli, then GCES Librarian, and incorporated in 2000 as a separate table originally designed for the former Internet Edition of the Grand Canyon–lower Colorado River bibliography. The GCES program had ended thus Part 20 is complete.
- GEOLOGY AND PALEONTOLOGY OF THE GRAND CANYON REGION: PART 21 comprises references to the geology (broadly speaking) of the Grand Canyon region. THIS part comprises references to the geology (broadly speaking) of the Grand Canyon region. It includes regional studies that embrace the Grand Canyon, plus material that examines the stratigraphic continuity of the Grand Canyon's formations. Noticeable among these citations are those that pertain to areas outside of the geographical coverage of the main body of THE GRAND CANON (see the map in this volume's Frontispiece). These extralimital references are important for their focus on correlative stratigraphic and sedimentological analyses that, in turn, reflect upon studies in the Grand Canyon. This is akin to examining the meteorological or climatological aspects of the greater Southwest (as in Part 18 PHYSICAL ENVIRONMENT) since they pertain to effects observed also in the Grand Canyon. Part 21 further includes broad studies of the geologic history of the Colorado River basin, inasmuch as these studies all pertain in some measure to the Grand Canyon and, in turn, the history of the river in the lower Colorado River region. Including these extralimital materials does not greatly inflate the number of citations in this part of the bibliography. Items that relate to the chemistry of surface and ground waters including springs are cited in Part 18.

#### COVERAGE AND FORMAT

Part 21 includes numerous extended abstracts of the works by Clarence E. Dutton, most notably his 1882 *Tertiary History of the Grand Cañon District*. While they were essentially reviews of recently published items, they are in fact lengthy extracts, sometimes with editorial notes. For this reason these extended items appear in this part rather than in Part 30 (Reviews and Notices).

Many items pertaining to the U.S. Geological Survey expedition (Birdseye Expedition) of 1923 on the Colorado River through Grand Canyon will be found in Part 2 (GENERAL PUBLICATIONS). This expedition principally examined potential sites for dams, but quite a lot of general and public interest material was reported from and about this expedition. Only specifically scientific items relating to the geology of the expedition are included in Part 21.

Added to Part 21 are items that pertain to theoretical and practical computerized analyses of data that utilize the Grand Canyon topographic model. These are not mathematical modeling studies of the development of actual topography of the Grand Canyon but are landscape imaging studies. Because they use a Grand Canyon elevational data set to analyze the relationships of cells or sets of data points in two- and three-dimensional image representations, I include them within the geology subject area for their use of topographical data sets. But inasmuch as the cited publications do not usually pertain to studies of the actual Grand Canyon, nor are they products that pertain to the canyon, they are not considered for THE GRAND CANON's separate section on Computer and Interactive Media.

Many citations from publications produced by the Geological Society of America include references to supplementary material in the Geological Society of America's Data Repository. Originally, this material could be requested by mail application to the society, and in the early 1990s a compilation of Data Repository items was available on microfiche, but today all of it is accessible online at

https://www.geosociety.org/datarepository/ (content removed to another site but can be accessed through this link).

Citations that pertain to the Peach Springs Tuff, named originally for occurrences in northwestern Arizona, are for the sake of bibliographical convenience cited in Part 11, Section 2. The Peach Springs Tuff type locality is near Peach Springs, Mohave County, Arizona, and thus falls more properly into Part 21 of this bibliography. However, the unit has more notably been the subject of detailed studies and correlations throughout the Arizona–Nevada–California region, the tuff source area being identified in the Silver Creek caldera of the southern Black Mountains; a majority of the published work pertains to those correlated occurrences and identification of source area, which occur mostly in the lower Colorado River region.

There are in Part 21 a variety of citations that pertain to material that most geologists and other users will consider to be "fiction"; for example, creationist perspectives of

#### COVERAGE AND FORMAT

geology and paleontology, and the so-called "Electric Universe Theory" that posits extraterrestrial-scale electrical charges as a cause of earth topography. Regardless, all of these still are "geological" in nature, and so are recorded in this section (in the same fashion as which I also include in the part of the bibliography pertaining to archaeology items about the putative "Egyptian" cave of the Grand Canyon). Part 7 of the bibliography, on "Fiction", contains citations for literature purposely so written (and similarly Part 6, Section 2, for fictional works for younger readers).

Publications that relate to creationist and young-earth perspectives of Grand Canyon geology are included in this part with the understanding that this is an ongoing, sometmes tempetuous, field of study that brings ideas of faith up against the tenets and methodologies of empirical and falsifiable science. Accordingly, some users of this bibliography may object to including creationist research with the science-based works of geology. However, these are topically identical so they are not segregated. To assist researchers looking for contrasting perspectives, both for and against creationist-held views embracing the Grand Canyon, these citations are denoted in the bibliography with Item numbers in *colored italics* (for example, *21.6300*).<sup>25</sup>

Omitted from Part 21 are items that pertain to the San Francisco volcanic field. Although this area may be considered together with regional volcanism, such as that of the western Grand Canyon, I have considered the literature on the San Francisco Peaks too great for an area only of the most marginal interest to the Grand Canyon and Colorado River.

Although I have included studies of the stratigraphic continuity of the canyon's formations, I have left out discussions that relate to the canyon's upper Paleozoic strata where they occur at Meteor Crater, east of Flagstaff, Arizona—because these discussions pertain to impact effects rather than to stratigraphic or sedimentological relationships.

Geological maps of this region are separately listed in Part 24. (They also appear in THE GRAND CANON's separate *Cartobibliography*.)

• HYDRAULICS AND HYDROGEOLOGY OF THE COLORADO RIVER IN LOWER GLEN, MARBLE, AND GRAND CANYONS: PART 22 encompasses all physical studies of the water flow of the Colorado River, applied research on its carried and bottom sediment, and the effects of the river's fluctuating flow on the distribution of sediment on the banks of the river. Citations pertaining to the hydrogeology of the lower Colorado River below Grand Canyon are consolidated with Part 11, Section 2 of the bibliography.

72

<sup>&</sup>lt;sup>25</sup> Colored italics are used for aesthetic and pragmatic reasons; color to stand out more on the page, italics in the event that a page in this bibliography is reproduced without the benefit of color.

#### COVERAGE AND FORMAT

- GEOLOGICAL FIELD GUIDES IN THE GRAND CANYON REGION: PART 23 includes all publications that are intended to serve as geological field guides to routes and specific localities in the Grand Canyon and vicinity. Included among them are all geological guides to the Colorado River through the Grand Canyon.
- GEOLOGIC AND SPECIAL TOPOGRAPHIC MAPS IN THE GRAND CANYON REGION (WITH GUIDES TO USGS TOPOGRAPHIC QUADRANGLES): PART 24 lists only separately published maps, and atlas sheets. Regional maps that embrace the Grand Canyon area are included. Similar maps for the lower Colorado River region are consolidated with Part 11, Section 2A.

In the 4th Edition of The Grand Canon, the Appendix to Part 24 was removed and incorporated as Section 4A of Volume 2, *CARTOBIBLIOGRAPHY OF THE GRAND CANYON AND LOWER COLORADO RIVER REGION*. It provides guides to U.S. Geological Survey topographical quadrangles in the greater Grand Canyon region.

- GENERAL AND SPECIALIZED MAPS OF THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS: Part 25 no longer exists within THE GRAND CANON Volume 1; it had previously been allocated to "General Maps". Except for introductory remarks, it has been removed from Volume 1 and reproduced as Volume 2, CARTOBIBLIOGRAPHY OF THE GRAND CANYON AND LOWER COLORADO RIVER REGION. See more extensive notes with Part 25 in Volume 1, Part B. Refer also to the informational table on the next page. The Cartobibliography is divided into four general sections: Section 1: Maps of the 16th to 18th Centuries (1535-1800). Section 2: Maps of the 19th to 21st Centuries (1801-present). Section 3: Chronological Cartobibliography of All Items in Sections 1 & 2. Section 4: Guides to Quadrangles Used for Topographic, Geologic, and Other Reference Maps of the United States and Mexico.
- AUDIO-VISUAL WORKS AND AUDIO WORKS AND MUSICAL SCORES [PARTS 26 AND 27]: PART 26 (Audio-Visual Works and Photographic Publications on the Grand Canyon and Lower Colorado River Regions) embraces products that employ the media of sight and sound, which include diverse products such as but not limited to films (silent and with sound), filmstrips, stereoview sets, and over-the-air broadcasts that have been made available on videotape. Part 26 includes two appendices: Appendix 1 to Part 26 General Guide to Commercially Produced 3-D Transparency Products; and Appendix 2 to Part 26 General Guide to Commercially and Governmentally Produced Stereographs.

(continued)

#### COVERAGE AND FORMAT

**REGARDING COMMENTS FOR PART 25** 

# Statistical Summary of Cartographical Items in THE GRAND CANON Volume 2 (*Cartobibliography*)

The *Cartobibliography* maintains the same format as that followed throughout THE GRAND CANON. It also keeps in place each citation's unique Item Number (a registration number only). Accordingly, the Item Numbers displayed in the Cartobibliography also divulge their original topical placements in THE GRAND CANON Volume 1. [See greater explanation on *p. xxiii* in Volume 2.]

Citations of "general maps" that were *transferred outright* from the original Part 25 of Volume 1, or which have been more recently added as new to this Cartobibliography, can be identified by the Item Number prefix "25."

Other prefixes from Volume 1 are:

- 9. copied from Part 9 (travel and trail guides)
- 10. copied from Part 10 (Colorado River guides)
- 11. copied from Part 11, Section 2A (separately published geologic maps in the Lower Colorado River region, which complement the geology citations pertaining to the Lower Colorado River region separate-coverage group of the bibliography), with a guide to topographic map quadrangles transferred from the "Appendix to Part 11"
- **18.** *copied* from Part 18 (physical environment of the Grand Canyon region)
- **19.** *copied* from Part 19 (biology and ecology of the Grand Canyon region)
- **24.** copied from Part 24 (separately published geologic maps and special topographic maps in the Grand Canyon region, which complement the geology citations for the Grand Canyon region), with a guide to topographic map quadrangles *transferred* from the "Appendix to Part 24"

	CARTOBIBLIOGRAPHY CITATION COUNTS			
FROM TGC VOL. 1	Section 1	Section 2	Section 4	TOTAL
Part 9		246		246
Part 10		106		106
Part 11		343	694	1,037
Part 18		2		2
Part 19		2		2
Part 24		454	391	845
Part 25	714	1,723		2,437
TOTAL	714	2,876	1,085	4,675

Section 3 is omitted from this table because it replicates, in chronological order, the contents of Sections 1 and 2. Additions that will appear in future editions of the Cartobibliography will employ the same system of Item Number enumeration: "General" maps will continue to use the 25. prefix as derived from the topical arrangement of THE GRAND CANON and will appear only in the Cartobibliography; newly cited specialized maps will be assigned their respective prefixes as outlined above and will appear in both the Cartobibliography and the respective thematic parts of Volume 1/Part B of THE GRAND CANON.

#### COVERAGE AND FORMAT

PART 27 (Audio works and Musical Scores on the Grand Canyon and Lower Colorado River Regions) limits itself to aural products (narrative and musical) and published musical scores. (The scores are listed as a separate Appendix to Part 27.) Citations within these sections have been encumbered by their un-booklike nature, by which even though there are some standardized means of citing them I have had to work around absent data for not having viewed many of them in their entireties. In these cases I have had to rely on data available on packaging materials, on product labels, and sometimes on external reviews or other notices.

- SEPARATE IMAGERY IN THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS: PART 28 includes only single, extraneous items; for example, a reproduction of a single painting, or specialized folios of prints, without accompanying text other than the legend. Photographs within articles or books that are credited to specific people or sources are not generally listed separately in this bibliography.
- COMPUTER AND INTERACTIVE MEDIA ON THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS: PART 29 embraces products that have been produced specifically for use on computers. While the definition of such products has blurred—for example, CD-ROM or DVD products including audio recordings can be construed to be "computer media"—the focus of this part of the bibliography is on graphical and interactive material; for example, map programs, interactive travel guides, older-style "screen savers", and games. Audio and audio-visual products are consolidated in their own parts of this bibliography.

While web-based media are omitted due to their ephemeral nature (*see below*), citations in this bibliography do include announcements and similar items that pertain to digital personal-pad devices ("apps", or applications, as they are known); this is to make known the existence of these products through the publications that were used to promote them. The "apps" themselves are not citable, though. Similarly, the proliferation of digital

"citations" that use the square-targeted "QRC" (Quick Response Code, usually referred to as a "QR code" [right] <sup>26</sup>) imprints that embellish publications, posters, signs, and virtually any other place that catches one's attention (at least since the 2010s)? The example shown here illustrates the QR code for the Grand Canyon Association, in 2013. The 2013 volume that presented the

proceedings of the 3rd Grand Canyon History Symposium<sup>27</sup> was a first for Grand Canyon-related publications by including QR codes to serve for the citations of web-based

<sup>&</sup>lt;sup>26</sup> The QR code is a trademarked form of two-dimensional, or matrix, barcode that is readable by portable digital devices, which redirect the user to pertinent websites and other digitally controlled sites. At present they are targets chiefly for the "smart phone" user.

<sup>&</sup>lt;sup>27</sup> R. D. Quartaroli (compiler, ed.), A rendezvous of Grand Canyon historians: ideas, arguments, and

# COVERAGE AND FORMAT

resources according to their URLs. These are not pertinent as bibliographical citations even if they were not web-restricted, because they are only machine-readable; those users without the resources to utilize the electronic links are left empty-handed, and when the technology to use them becomes obsolete all users will be left empty-handed. Regretfully, the 21st century will be partly an intellectual Dark Age, when linked resources cannot be retrieved through the use of these links.

As a rule, items that are posted to websites are not included in this compendium. There are, however, numerous organizational newsletters and comparable documents that have been posted to internet websites in formats that are facsimiles of, or by design mimic, printed-format layouts; judged by appearance and, sometimes, the inclusion of volume and issue numbering. These items are usually posted as PDFs. Many of them have been included in THE GRAND CANON because it is not generally possible to distinguish between those that are available only online and those that have been printed (or otherwise distributed in paper formats); some are copies produced for paper distribution that also have been converted to PDF and posted to a website. One certain way of identifying those that have been distributed in paper format are items that include space for a mailing label and return address. One concession that eventually was made is for an obviously web-posted serial that continues a print version of the serial or which originates a volume/issue number scheme and displays in the fashion of a print publication. These will be included since it is likely that they are intended to be printed out as necessary. Webpage formats that clearly do not reproduce or do not mimic traditional printed-format layouts have been ignored; these include crudely composed items that rely on basic HTML layout and graphics use, clearly designed for web presentation, as well as those that have garish, HTML-composed coloring, animation, and other kinds of graphics that do not or cannot appear in printed works.

• BOOK REVIEWS AND SIMILAR NOTICES REGARDING PUBLICATIONS ABOUT THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS: PART 30 includes critical reviews at length in scholarly publications as well as promotional reviews, notices in general-interest publications, and cursory editorial or readers' notices. Reviews are included in this bibliography only if they relate to publications about the Grand Canyon or lower Colorado River specifically; otherwise the review must mention the canyon or the river region. Product reviews include those for audio and audio-visual productions, and computer software.

Reviews and notices are arranged by the names of the reviewers. Throughout the rest of this bibliography, citations for the reviewed or noticed publications are accompanied by

#### COVERAGE AND FORMAT

ancillary notes that cross-list citations in Part 30. For an illustrated example see the explanation of Item numbers in Volume 1, Part B.

• NEWSPAPER GUIDE FOR THE GRAND CANYON AND LOWER COLORADO RIVER REGIONS: PART 31. Newspapers are not generally included in THE GRAND CANON. There are, however, some exceptions. *The New York Times* is accorded its own section in this bibliography (Part 3), and citations from the earlier years of the *Deseret News* (Salt Lake City) are placed within pertinent parts of the bibliography. In other instances a newspaper is cited in this bibliography if an article had been reprinted later in another periodical; the original source is acknowledged in a comment at the end of the citation.

Special-interest newspaper-format periodicals are included in the bibliography; for example, *High Country News*, a mostly biweekly serial. Some weekly newspapers, and weekly magazines included with newspapers, are also cited; for example, *Computerworld*, and *Flare* from the *Arizona Daily Sun* (Flagstaff).

Part 31 comprises a listing of regional newspapers that some readers may wish to use to begin locating local (or sometimes online) sources.

• MARGINALIA RELATING TO THE GRAND CANYON AND VICINITY: PART 32. This part contains citations which are themselves not about the Grand Canyon but refer to the Grand Canyon as a venue—for example, meetings and conferences about subjects other than the Canyon held at Grand Canyon. Similarly there are marginal references to nearby Grand Canyon locales, which are embraced within this bibliography, and significant commemorative uses of the Grand Canyon name. While these citations do not specifically contain information about the Canyon, they are peripherally a part of the history, awareness and responsiveness to the Canyon, emphasizing its cultural reach globally and in human attentions.

# PREVIOUSLY USED PARTS REMOVED

**Part 33—"Other" Grand Canyons** is no longer a part of the bibliography. That part, which tracked uses of the term "Grand Canyon" in other geographical locales, was removed in 2009 as a matter of pragmatic bibliography, not truly pertaining to the Grand Canyon except through nomenclature and comparison, analogy, and metaphor. A separate, greatly expanded nomenclatural summary, *Grand Canyon: Colossal Mirror*, is now Volume 3 of THE GRAND CANON, accessible online through <a href="https://ravensperch.org">https://ravensperch.org</a>.

**Part 34—Miscellaneous Manuscripts** was removed from the bibliography in November 2003. Originally, I had believed it was prudent to include manuscript materials that were *cited by other sources*, in order to include those records in the bibliography. However, this is not the purpose of the bibliography; tracking manuscript and other primary source materials is an entirely separate project, one for someone else to pursue.

#### COVERAGE AND FORMAT

# GEOGRAPHICAL COVERAGE

When we speak of 'The Grand Canyon' it must be understood that the Canyon does not start at the edge of the precipice. Nor is it an arbitrary line on a map, but rather it is the sum-total of the entire area surrounding those edges.

— Stephen Verkamp<sup>28</sup>

THE FOCUS OF THE GRAND CANON is that great andiron of the Southwest, the region of the Grand Canyon of Arizona and the Colorado River country from there to the river's delta in the Gulf of California, Mexico *(see the maps in this section)*. Everything that has transpired in these regions is accounted for, whether natural resources or human affairs. If it happened in, or is about, this geographic region, it is fair game for the bibliography. Verkamp's statement above pertains just as pertinently to the Colorado River region, that the Colorado River is not confined to its "banks" but is the "sum-total" of the areas that are influenced by it or which depend upon it. And for both of these regions, we hold ideas and concepts of their environmental, geological, and human importance.

The **GRAND CANYON REGION** is defined in this bibliography as the physiographic canyon and its surrounding landscape, approximately from a line north of the San Francisco Peaks northward about to the Utah border, and from the lands bounding the eastern end of the canyon (including the country adjacent to the Little Colorado River gorge) westward to the Grand Wash Cliffs.<sup>29</sup> Along the Colorado River the Grand Canyon region is taken to begin at that physical and metaphorical stopper, Glen Canyon Dam, at the northeastern corner of the region.

Stephen Verkamp, "Testimony to the Subcommittee on National Parks, Forests and Public Lands of the House Committee on Natural Resources, November 3, 2011" (originally cited as a web resource of the U.S. House of Representatives, "www.naturalresources.house.gov/UploadedFiles/VerkampTestimony11.03.11.pdf", 4 pp., but link was no longer valid in August 2021). See instead in the published record, "Statement of Stephen Verkamp, President, Verkamp's Inc.", pp. 100-109 in H.R. 1980, H.R. 2070, H.R. 2621, and H.R. 3155: legislative hearing before the Subcommittee on National Parks, Forests and Public Lands of the Committee on Natural Resources, U.S. House of Representatives, One Hundred Twelfth Congress, First Session, Thursday, November 3, 2021: Serial No. 112-81 (U.S. Government Printing Office, Washington, D.C., 2012)]. Verkamp testified as a long-time Grand Canyon resident and president of the family interest, Verkamp's, Inc. His grandfather was John G. Verkamp (1877–1944), a pioneer who in 1906 established a souvenir and curio shop at Grand Canyon, one which survived for more than a century before the family turned the property over to the National Park Service, which now is a historically focused visitors' center. [Search for "Verkamp's" in the bibliography.]

<sup>&</sup>lt;sup>29</sup> The arbitrarily defined southern boundary of THE GRAND CANON bypasses the towns of Flagstaff, Williams, and others. However, the user will note that occasional citations appear for these and other extralimital locales, though only when those citations make reference to the Grand Canyon.

#### COVERAGE AND FORMAT

The LOWER COLORADO RIVER REGION is defined in this bibliography by the river and its surrounding landscape below the Grand Canyon, beginning at the Grand Wash Cliffs, encompassing Lake Mead and continuing southward with the river into its delta and the Gulf of California. Usually, the lower Colorado River is taken to be the physical river corridor from the Paria River to the delta—as part of the hydrographically defined Lower Colorado River Basin—but in this bibliography it is the broad span of country along the river from today's Lake Mead and lower Virgin and Muddy Rivers, and along its natural paths to the sea, occasionally overflowing into the Salton Sink to re-create the Salton Sea (although the latest breakout, in the early 20th century, was caused chiefly by humans).

These are arbitrary limits, ones adopted for compiling a bibliography. Some readers may further notice that I have not provided a definition of the "Southwest". Its definition, following decades of discussion by historians, is precisely-, over-, and under-defined, responding to interpretations of geography and culture, even ecology and climate. The Grand Canyon and lower Colorado River regions are within most definitions of the "Southwest", but not all of them. Geography is the first defining principle of this bibliography—and then embracing all the activities that take place within, or affecting, this area. So here, the idea of the "Southwest" infuses and dissipates from this region asymmetrically, and no special boundary is implied although it is guided by the limits depicted in the "Geographical Coverage" map below.

Even the idea of the "Colorado River Basin" can be muddled. Of course there is the physiographic basin, defined by the divides that separate it from adjacent river basins, which narrows at last to a thread leading into the Gulf of California. There are two kinds of basins—and I do not refer to the legislatively separated "Upper" and "Lower" basins that are used to determine the apportionment of "useful" waters. There are some misrepresentations of the effective limits of basins, based on the specific interests of those who are looking at this landscape and the happenings thereon. There is the vast Green-Grand basin (I here revert to the old definition whereby the Colorado River name was applied after the Green and Grand Rivers met). The Green-Grand feeds "the Colorado", which then passes narrowly through the Grand Canyon, discharging then into the icicleshaped appendage (not even a basin of its own) that dives due south to the Gulf of California. It is as if the San Juan, Little Colorado, Bill Williams, and Gila River basins are only accessories, that the Colorado zips past their confluences without any regard to what goes on up those rivers; and the Virgin River is conceptually grafted to the Upper Basin, more a part of Utah, passing by necessity of gravity through bits of Arizona and Nevada. It's a peculiar hydrogeography, one that comes about by the separation of human histories and how these areas have been studied. The "Colorado River Basin" as a whole is a map feature; its history comes from its separate rivers. Then there is the matter where the Colorado River Basin is an "idea", one which fades in every direction from its "center" at

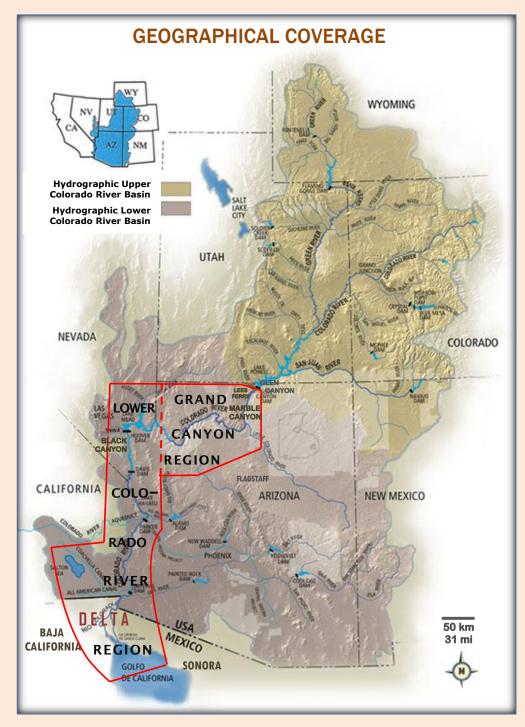

#### COVERAGE AND FORMAT

the Green-Grand confluence, muddled with the mistaken idea that it is the same as the Colorado Plateau; in other words, effectively limited to Utah and Colorado.

The geographical boundary of this bibliography is necessarily for my convenience, reflecting the limits of my geographic familiarity within a broad spectrum of subjects. Yet these limits also delineate a manageably sized geographical region within which is an array of tangible and intangible interactions that people initiate and experience. The people are affected by the conduct of nature; the physical and ecological world of lands, waters and air, and the animals and plants that inhabit them. The people, through ideas and actions both, influence individuals and their communities, creating what we broadly call "history"; and likewise affected are the physical and ecological landscapes and the inhabitants therein. The people here, indigenous, immigrant, and transient, experience and continue cultures that are inherited, adopted, and imposed, which instruct from ancient and historical pasts; and with these the people embark in activities with which they search for the ways and means of the future. Every action, every assertion, corresponds to another. Now, there are good reasons to embrace both the Grand Canyon and the extended lower Colorado River from Glen Canyon Dam to the sea, a region whose parts may be seen as topographically, geologically, ecologically, climatically, culturally, and politically dissimilar. In fact, their human histories ever since prehistoric times and, in written records from the time since the Spanish incursions of the mid-1500s, are entwined. Their natural histories overlap in numerous ways, too, particularly the recent geological history of the Colorado River even though it flows across two distinctly different physiographical provinces of North America. One can investigate one part of the region without having to attend to things that pertain to another area, but complex interrelations reveal themselves as one refocuses broadly or when the region is viewed is viewed from multidisciplinary perspectives. To thematically separate the lower Colorado River from the Grand Canyon is done easily; the historical and cultural separation, though, is less well defined; geologically and environmentally, even more so.

To separate Native American cultures of the Grand Canyon region from those of the lower Colorado River diminishes traditional interactions and the impacts weighed upon all by European–Anglo activities over five centuries everywhere in the region. The Colorado River traces human heritages that arose and continue through understanding and participating in life in this land. The river runs through the physical land, delivering life, death, and rebirth in absolute, inspirational and spiritual ways. It holds histories to be discovered and discovered anew, and it seems to withhold answers. So likewise this bibliography — looking at all of this land, and the life, places and things therein, it records the work of thousands; they tell us what we can understand, opine and may never know. Without the whole view, the portions fade. These intertwining views formulated and directed how THE GRAND CANON was compiled.

#### COVERAGE AND FORMAT

Approximate geographical area covered in THE GRAND CANON, embracing the Grand Canyon and lower Colorado River regions. It follows the river corridor from Glen Canyon Dam to the river's delta and the Gulf of California. The boundary in the gulf encompasses Mexico's Reserva de la Biosfera Alto Golfo de California y Delta del Río Colorado, and in Sonora embraces part of Reserva de la Biosfera del Pinacate y Gran Desierto. THE GRAND CANON defines "Lower Colorado River" as that region below Grand Canyon, which differs from the hydrological Lower Colorado River Basin that begins below the confluence of the Paria River at Lees Ferry and incorporates the sub-basins of all tributary streams, including the Little Colorado and Gila Rivers.

**————** Approximate division between "Grand Canyon" and "Lower Colorado River" thematic regions of THE GRAND CANON.

Base map of Colorado River drainage basin modified from U.S. Bureau of Reclamation, Glen Canyon Dam Adaptive Management Group. The Upper and Lower Colorado River Basins delineate the apportionment of the waters of the Colorado River basin by the Colorado River Compact of 1922; divided just downstream from the confluence of the Paria River near Lees Ferry. Dams and impoundments are indicated on the map. Lighter-gray areas, not labeled, are American Indian reservations. Basin boundary is not depicted in Mexico (see next page for map displaying basin boundary in Mexico). See "Geographical Coverage" section within the introductory text for a map (p. 89) that delineates the natural Colorado River delta.

# PHYSIOGRAPHY AND POLITICAL GEOGRAPHY OF THE COLORADO RIVER BASIN

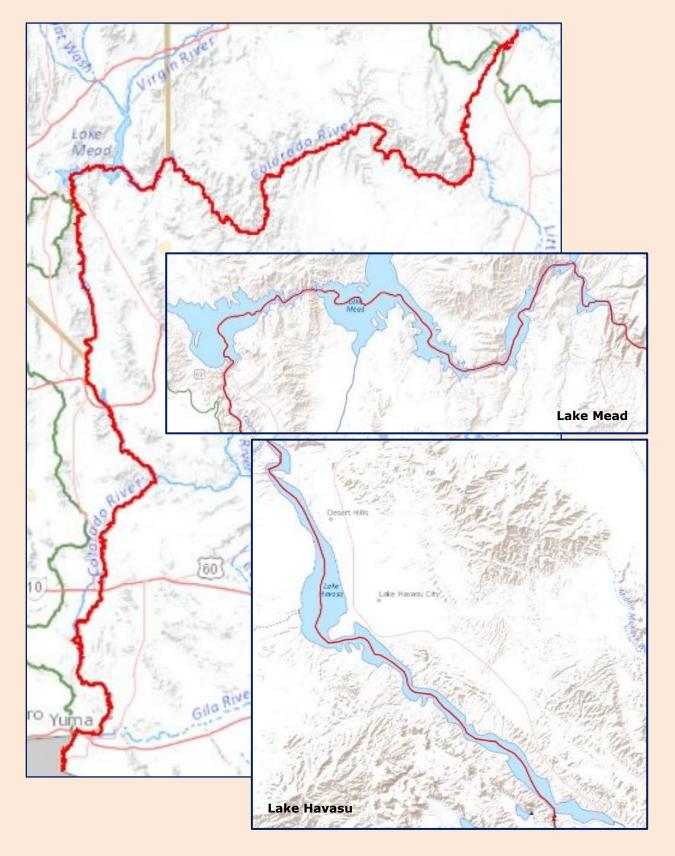

(including Mexico)

Darker-shaded area delineates the Colorado River Basin, including its reach in Mexico (note that this interpretation does not embrace the Salton Sea-Imperial/Mexicali Valley enclosed drainage area, although by inferrence the duller-green shaded areas in that region depict lower elevations). Purple tints delineate major urban areas.

#### COVERAGE AND FORMAT

The 17th and 18th centuries in this region recorded human interactions through a geographically far-flung but sparsely sowed field of publications, focused on the lower Colorado River. The 19th century saw the first sponsored explorers in three centuries to span the whole region, rediscovering the Grand Canyon. Later in the century came an inflow of entrepreneurs and scenic investigators, geologists and geographers, archaeologists and ethnographers, biologists and nascent ecologists, and a few permanent residents and curious travelers, the harbingers of throngs of tourists.

The 20th century witnessed the infusion of a greater populace, both permanent and transient, and all manner of specialized researchers, in the humanities and sciences mostly. Plans for, and partial implementation of, a regiment of dams in the Colorado River basin brought beneficial and damaging effects alike to culture, environment, law, and administrative practices—not to overlook variant effects on the quality of life in general, including tourism, the irrigation of farms, and the safeguards of air quality and silence to mention just a few aspects. Thus far in the 21st century focuses have generally shifted away from large-scale investigations to specialized projects and, in the areas of water-management, increased attention to concerns over the effects of drought and climate change.

I realize that the hydrographical Lower Colorado River Basin, and by convention the political lower Colorado River, begins (on the river) at the U.S. Geological Survey hydrologic stream gage at Mile 0, just below the mouth of the Paria River near Lees Ferry. However, Glen Canyon Dam serves as a barrier both to the river and to the bibliographical coverage of THE GRAND CANON. The encanyoned river in Glen Canyon between the dam and Lees Ferry is now amputated from the body of Glen Canyon, and, with the exception of physical and chemical qualities of the water draining from Lake Powell, it is ecologically connected solely to the river downstream from the dam, so I bibliographically extend the lower Colorado River up to the dam.

That which is left of Glen Canyon between the dam and Lees Ferry is its history. To be sure, there are archaeological, geological, and biological aspects, too—each inherently alterred or threatened—that continue to be of interest. Periodic reexposures of side canyons in fluctuating Lake Powell, the result of climatic distress and water management, will continue to tantalize historians, scientists, and travelers in Utah, but unless the dam disappears or the lake is made permanently low, Glen Canyon—proper will never again be a visible and explorable geographical feature. Despite the definitions of administrative boundaries and the practical differences of geology, the slender appendix of Glen Canyon, downstream of its dam, is all we have now of Glen Canyon in the rough.

Lees Ferry as a geomorphological crossroads is tangibly linked to the history of the entire Southwest, one of the few places the Colorado could usually be crossed before bridges, a passageway between the Little Colorado River towns and the Mormon country of

#### COVERAGE AND FORMAT

Utah. But now Lees Ferry is only at the end of a road, straddling the Glen Canyon and Grand Canyon political units. Bridges upstream and downstream supplant the ford and ferry; the river is no longer through-flowing, stumped momentarily by Glen Canyon Dam. Today, Lees Ferry provides the only unobstructed access to the bottom of Glen Canyon and, in the other direction, is the starting point for one of the world's most remarkable natural and historical whitewater routes, through Marble and Grand Canyons. The distinctions of history and geography have been muddled here, too. An ironic example of this was an error in a large brown informational highway sign I saw in 1997 on the eastbound side of U.S. Route 89A, west of Marble Canyon. Riding atop piles of river equipment in the back of a stake truck, I had no way of photographing the sign as we sped past, so suddenly was it seen, yet its ironic significance weighed on me: it alerted travelers to the ambiguous and non-existent "Grand Canyon National Recreation Area". Fortunately, the sighting was photographically proved before the sign was replaced; otherwise it would have slipped into the whispered chronicles of hearsay.<sup>30</sup>

At the western end of the Grand Canyon, where the physiographic canyon is dramatically concluded by the Grand Wash Cliffs, Lake Mead slips in past the gateway up into the western part of the canyon, stealing the Colorado River's historic identity there.<sup>31</sup> In the 1940s the lake stilled some of the Colorado's more famous rapids, like Lava Cliff Rapid and Separation Rapid. Lake Mead National Recreation Area fortunately does not also politically steal the lower Grand Canyon; its administrative boundary is pointedly if not necessarily permanently marked by a buoy in the river channel. The buoy likewise approximately marks off the two major portions of THE GRAND CANON, separating the coverage of the canyon-proper and its adjacent lands, and the region of the "lower Colorado River", to the sea.

Flowing with the river, a short way into the main body of Lake Mead west of the Grand Wash Cliffs is another historic river crossing, Pearce Ferry, also muted. This one is less of a geomorphically constrained passage than Lees Ferry, but substantially far more used in the 19th and early 20th centuries. Expeditions, trappers following the waters, and prospectors moving north or south within the promising ranges of the Basin and Range physiographic province crossed here or nearby; so too some travelers dropping from the Old Spanish Trail, and Mormon colonists moving south from Utah to investigate and invigorate the commercial prospects of the lower Colorado. Everyone crossed here to avoid the Grand Canyon and the high plateaus on either side of it—save for the occasional passage through the Lees Ferry slipstream.

<sup>&</sup>lt;sup>30</sup> C. V. Equusasinus (*pseud.*), Grand Canyon creationists: monument to bureaucracy. *Boatman's Quarterly Review*, 12(2) (Spring 1999), p. 39. (ITEM NO. 2.2548.)

<sup>&</sup>lt;sup>31</sup> See the noticeable blue line on the western side of the map of Grand Canyon's physiographic rim, illustrated farther below.

#### COVERAGE AND FORMAT

The spot where the Lake Mead National Recreation Area's "Pearce Ferry" is marked by official signs does not mark the historic ferry site, long since drowned and silted in beneath the surface of Lake Mead. When I first composed these paragraphs, I said that the recreation area's "Pearce Ferry" slid tiredly into the warm waters of the lake. But the vagaries of climate and the demands and allocations of water supply in the West caused the lake's water elevation to drop drastically during the opening years of the 21st century (euphemistically referred to by Lake Mead National Recreation Area as a "drawdown"); and it continues, ladling away the waters for which Hoover Dam was built in the first place. A decade after my comment the beach was dry, the lake bottom in Pearce Bay reclaimed already by desert brushland. Here, the Colorado River runs out of sight of the recreation area's "Pearce Ferry", dashing through the silty lake bottom. In the process it created "Pearce Ferry Rapid", a new, albeit temporary, rapid of the Colorado River; an unrocky pourover but one requiring alertness, respect, or avoidance. Until the western waters upstream replenish the diminished Lake Mead, redrowning Pearce Bay and the river course in western Grand Canyon—ever more less likely—the river continues to wend its way in search of its original channel.

And so the Colorado River through the Grand Canyon—as well as its history and science—is bracketed by two of the loneliest places in the country, places that only historians, river runners, and bibliographers could love.

Odd as it may seem, one may then question *how* the Grand Canyon is defined; that is, where is the rim of the Grand Canyon? The location and extent of the physiographic Grand Canyon, or more precisely its "edge", may seem to be an obvious definition for one who has stood on the brink and experienced the draw of the open abyss. Geomorphologically, the rim follows a tortuous course, tracing the topographic tendrils of every drainage, large and small and inconsequential, all of which converge upon the Colorado River. In some places more gently sloping areas may provide a more ambiguous location for the rim. But since there has never seemed to be a particular need to define the rim except in a few instances of describing land apportionments, the whole of the physiographic rim never was precisely located.

As part of extensive field mapping in the region, George H. Billingsley (U.S. Geological Survey) delineated the approximate physiographic rim of Grand Canyon for a Survey map recreated digitally with Haydee M. Hampton and distributed in 1999 (*illustrated below*). While the interpretation of the rim is subjective in some parts, and is not in any case a legal definition of the rim, it provides a first look at the true figure of the physiographic canyon. On examing the map one may be struck by the beauty of its general symmetry. A closer look brings to attention the incredible number of convolutions seen even at the scale of the map; and most notably, the different shapes and crenulation styles

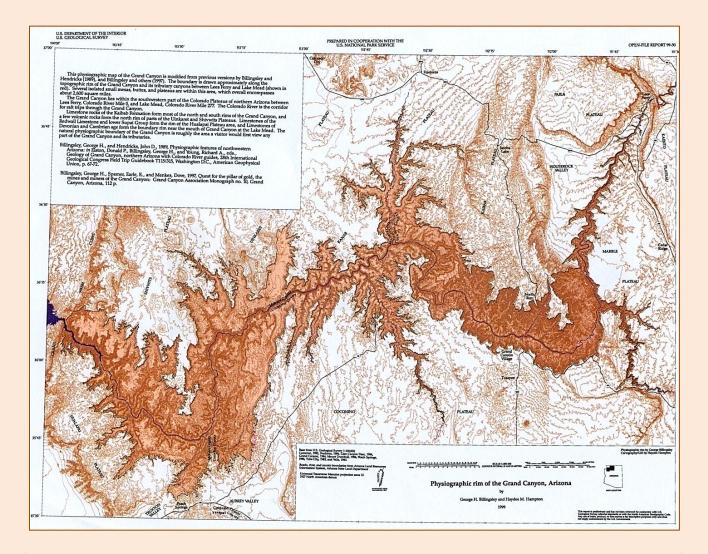

#### COVERAGE AND FORMAT

of the rims, with Kanab Creek noticeably entering from the north and, opposite it, Havasu Creek entering from the south; and as well the Little Colorado River, which has a huge drainage basin, entering from the east. One may suppose that the two rims, measured along the very extenuated line marking the edges on the north and south sides, must be of very different lengths, especially when one takes note of the much more highly crenulated north side, a function of the geological lay of the land, as well as the interruptions of significant tributaries, the Little Colorado River, Kanab Creek, and Havasu Creek. The mappers, though, had not indicated the lengths of the two rims as drawn on the map. These were measured by Susan S. Priest (U.S. Geological Survey) using ArcInfo data points from Billingsley and Hampton's data set. The crenulated north side measures 1,384 miles along the rim contour. Despite the great asymmetry between the two sides, the south side is astonishingly a nearly identical 1,373 miles.<sup>32</sup>

As for the peculiar appendage of the Salton Sea region, as also covered in this bibliography (*illustrated below*), were it not for natural breakouts of the Colorado River to the Salton Sink, the natural history of the lower Colorado River region would not be attached to this bibliography. The Salton Sink (and its historical ancient Lake Cahuilla) is as much a part of the Colorado River delta as that which sinks actually into the Gulf of California. Then, with the anthropogenic breakout of the river during 1905–1907, the whole Salton Sea region—and eventually the Imperial and Mexicali valleys—opened itself in every other respect to the coverage of this bibliography, in terms of geography, geology, and all aspects of human affairs, like engineering, agriculture, culture, and tourism. Thus while a periodic hydrogeologic event let this bibliography embrace the physical Salton Sink, an accident by hapless water managers also forced it to embrace lasting environmental effects and human activities in this region.

Data were first sent from Billingsley to Spamer in 2010. These figures were included in a publication by E. E. Spamer, "What Lies Behind the Grand Canyon?", *Annals of Improbable Research*, Vol. 16, no. 5 (September/October 2010), cover, 1, 6-10 (ITEM NO. 2.14635). Even though the physiographic boundary is subject to interpretation in some places, such as where the rim is immediate and precipitous, the data used to create this map are reproducible and thus open to objective reevaluation.

#### COVERAGE AND FORMAT

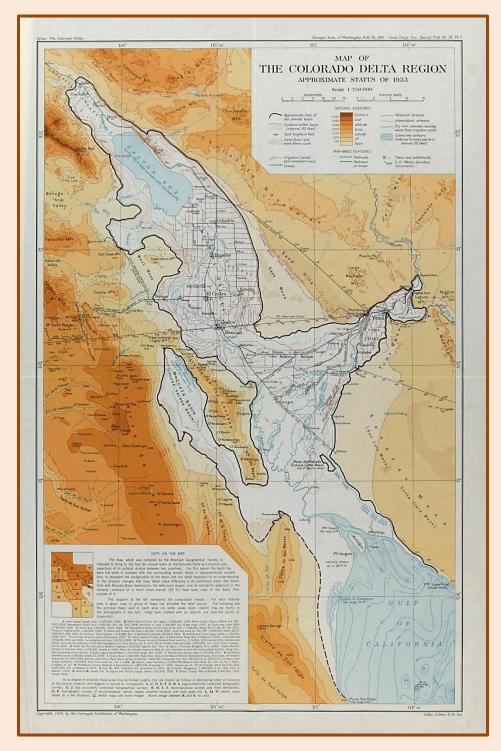

"Physiographic rim of the Grand Canyon, Arizona"

Not a typical topographic or geological map, but one uniquely Grand Canyon. The physiographic rim is interpreted along both sides of the canyon, from Lees Ferry (on the Northeast) to the Grand Wash Cliffs (on the West), embracing Marble Canyon (from Lees Ferry nearly to the Little Colorado River that enters from the Southeast) and Grand Canyon. The rim is plotted not along lines of equal elevation as like topographic contours but along what can be construed as the "edge" of the canyon. While the precise "edge" may be subjectively defined in some areas, this map nonetheless for the first time displays the true figure of the canyon without respect to definitions of political geography or to stylistic generalities that cause imprecision. By convention, the two sides of the canyon, separated by the Colorado River, are called the North Rim and the South Rim. Note that the physiographic rim also runs along the rims of significant tributaries, the most prominent ones of which are Kanab Creek (on the North), the Little Colorado River (on the East), and Cataract/Havasu Creek (on the South).

George H. Billingsley and Haydee M. Hampton, *Physiographic Rim of the Grand Canyon, Arizona*, U.S. Geological Survey Open-File Report 99-30 (1999). Produced in cooperation with the U.S. National Park Service. [ITEM NO. **24.39**] <a href="https://pubs.usgs.gov/publication/ofr9930">https://pubs.usgs.gov/publication/ofr9930</a> (last accessed 18 December 2024).

# COVERAGE AND FORMAT

**The Colorado River delta** forms a T-shaped area as shown in this map. Historically, occasional Colorado River overflows descended to the northwest rather than to the south and the Gulf of California. During recent times the river has flowed twice into the Salton Sink, below sea level—once in the 1890s when it overflowed naturally to reform the Salton Sea, and again in the early 1900s when an accidental breach of canalworks let it flow catastrophically unchecked for nearly two years to fill the present Salton Sea. For more than a century irrigation in the Imperial and Mexicali Valleys has provided rich farmland in the desert (note the latticework of canals and irrigation drains depicted on the map). (Godfrey Sykes, 1937, Carnegie Institution of Washington Publication 460 / American Geographical Society of New York Publication 19, Plate I.)

# COVERAGE AND FORMAT

**Note on Topographic Maps.** THE GRAND CANON, through its Volume 2, *Cartobibliography* (access through <a href="https://ravensperch.org">https://ravensperch.org</a>), includes guides to the topographic map quadrangles produced by the U.S. Geological Survey and Mexico's Instituto Nacional de Estadística y Geografía. (For more information, see Part 25 in Volume 1/Part B [*Bibliography*].)

# NOMENCLATURAL CLARIFICATIONS

**RÍO COLORADO** AND COLORADO RIVER <sup>33</sup> Historical, bibliographical, and cartographical research in the region covered by THE GRAND CANON can be confusing given the number of names by which the Colorado River has been known since its European discovery in 1539. "Colorado River" appears elsewhere, too: in Texas (United States) and as "Río Colorado" or "Rio Colorado" in various places in the Spanish- and Portuguese-speaking world.

For the benefit of newcomers to the study of this region, and as a refresher for those who are more familiar with the region, a summary of names is below. The names pertain to the originally named stretch of the river, from the confluence of the Grand and Green Rivers in Utah to the sea. (The name "Colorado" was legislatively applied to the Grand River in 1921, to allow the Colorado River to locate its headwaters in the state of Colorado.)

Big Colorado River

"big stony river (the Colorado of the West)" [in a work of fiction; presumably taking the name from the Stony Mountains (Rocky Mountains)]

Boñaguia R[ivière] [in French]

Caramara flu[vius] [in Latin] [see Rio Coromara]

Collerado river [sic]

Collorado Fl[usse]. [in German]

Colorado de los Martyres

Colorado de l'Ouest

Colorado del Oeste

Colorado (des Westens) [in German]

Colorado Grande

Colorado-Ouest [in French]

Colorado River

Colorado River of California

Colorado River of Mexico

Colorado River of Sonora

Colorado River of the Gulf of California

Colorado River of the West

Names in this list include those from manuscript and published materials, and misspellings. Some, particularly those from the 19th or 20th centuries, may be mixtures of Spanish and other languages. A few names are misapplied from, or confused with, other rivers as a matter of presumption.

# COVERAGE AND FORMAT

Coloratus fl[uvius]. seu Nord-Strom [sic; in mixed Latin and German]

Coloredo River

Cotorado R[ivière]. [sic; in French]

Firebrand River [in translation of the original Spanish, Río del Tízón; see below]

F[iume]. Colorato [sic; in Italian]

Fl[usse] Colora de los Martyres [sic; in mixed German and Spanish]

Fl[uvius]. boni præsidii [in Latin]

f[luvius]. Colerado [sic; in Latin] [seen also corrected as f. Colorado]

Gran Rio Colorado [and as Gran Río Colorado]

Grand Colorado [applied to the Grand River]

le grand fleuve Colorado ou du Nord [in French]

le grand rio Colorado [in French; and as le grand rio Colorado de Californie]

Great Colorado

Great Colorado of the Pacific

Great Colorado River [and as Great Colorado]

Great Rio Colorado of California

Great River of the Apostles [a conflation of the Gila and lowermost Colorado Rivers as one stream]

Green River or Colorado of the Gulf of California [sic]

Good Hope River [in English; as a tributary to Tison R.]

Martyrs River [and as Martyr's River]

Muddy River [a literary liberty]

Nord-Strom [North River in German; see Coloratus]

North River [not the Rio Grande]

Ouiquintas F[iume]. [in Italian]

Red River [also applied to the Little Colorado River, and at least once in error to the San Juan River]

Red River of California

Red River of the West

Río Buena Esperanza

Rio Colerado [sic]

Rio Colorabro [sic]

Rio Colorada [sic]

Río Colorado

Rio Colorado II [presumably to distinguish it from the Rio Colorado of Texas]

Rio Colorado (West)

Rio Colorado de California

Rio Colorado de la California

Rio Colorado de las Balzas

Rio Colorado de los Estados Unidos por el Norte [sic]

Río Colorado de los Martyres

Río Colorado de México

#### **COVERAGE AND FORMAT**

Río Colorado del Norte [and as Rio Colorado del Norte]

Río Colorado del Occidente [and as Rio Colorado d'Occidente]

Río Colorado del Oeste

Rio Colorado del Sur

Río Colorado Grande [and as Rio Colorado Grande]

Río Colorado Grande de la California

Río Colorado Grande de los Martyres

Rio Colorado of California

Rio Colorado of the Gulf of California

Rio Colorado of the North

Rio Colorado or Grand River [sic]

Rio Colorado or North River [also in translations]

Rio Colorado or of the North [sic]

Rio Colorado ot Totontoac [sic]

Rio Colorado ou R[ivière]. Verde [sic, in French; labeled for the reach between the Bear River (Utah) and Little Colorado River (Arizona)]

R[io] Coralado [although the name seems to conflate Rio Colorado and Rio Coral (Gila River), the river's poor portrayal nonetheless is distinct from the similarly poorly portrayed Gila River drainage]

Rio Coromara [assumed by contemporary geographers to be that of Marco Polo's river in China; also seen as "R. de Coramara" and as "Caramara flu."]

Rio de Aguchi, ò de Bona Guia [in Italian]

Río de Alarcon

Río de América Septentrionale

Rio de Anguchi [in Latin source]

Río de Buena Guía [and as Rio de Bona Guia]

Rio de Colorado [and as Rio-de-Colorado]

Rio de Colorado of California [sic]

El río de las Balsas [also applied to a South American stream and to several locales in Mexico]

Río de los Martires [and as Río de los Martyres]

Río de los Tiburones [sic; in fiction]

Río del Norte [not Rio Grande del Norte, which is the Rio Grande of the Gulf of Mexico]

Río del Tízón [and variant contemporary spellings; e.g., "Taon", "Teco", "Tecon", "Tecon", "Tiguex", "Tisan", "Tison", "Tocon", "Toucan"]

Rio Gran de Colorado [may only be due to awkward map lettering of Rio Grande Colorado]

Río Grande [not Rio Grande del Norte, which is one name for the Rio Grande of the Gulf of Mexico]

Río Grande Colorado

Río Grande Colorado de los Martyres [in 1710 manuscript, as "Rº. Ge. Colorado de los Martyres"]

Río Grande de Buena Esperanza

Río Grande de Colorado

Río Grande de los Cosninos

#### COVERAGE AND FORMAT

Rio Green [in Russian, "Рио Грин" (meaning "Green River", correctly applied to the Green River and misapplied to part of the Colorado River)]

Río Mysterioso

Río Totonteac [also as Rio Totonteanc and Rio Tontonteac; see also under "T"] 34

River Colorado

Riv[ier]. Colorado of Del Norte [in Dutch]

R[ivière]. Colorado ou des Martirs [in French]

Rivier de Colarado [sic; in Dutch]

rivière de Calorado [sic; in French]

Rivière de Coral [in French, the Colorado mislabeled; should have been labeled on Gila River]

Roode Rivier Colorado [sic; in Dutch]

Tigna fiume [in Italian, "Ringworm River"]

totonan[-illegible] F[luvius] [sic, in Latin] [see also Río Totonteac]

Tontonteanch f[iume]. [in Italian] [see also Río Totonteac]

Totonteac fluvius [in Latin] [see also Río Totonteac]

Western Colorado

The Colorado had also been referred to as the "Seedskeeter", "Seedskadee", and variant spellings, which are corruptions of an Indigenous American pronunciation actually meant for the Green River (in the upper basin area). The Little Colorado River has been given comparably overlapping names, including a redundant "Río Colorado".

**PUERTO DE BUCARELI.** Notable among many maps and in other literature is the note of a name, placed usually by the confluence of the Colorado and Little Colorado Rivers. The name originates with padre Francisco Tomás Garcés soon after he had visited the Havasupai on Cataract Creek in 1776. Viewing the expanse of the canyon to the north and east, he bestowed on it the name "Puerto de Bucareli", honoring then-Viceroy of New Spain, Antonio María de Bucareli y Ursúa. When Alexander von Humboldt passed through New Spain in 1803, he examined some of the extant manuscript maps of the territory and took up the name on his sketch copy of a map drawn in 1777 by Bernardo de Miera y Pacheco, who had incorporated Garcés's honorific. Humboldt's map was published in 1811 (preceded by a couple of pirated maps in 1810), on which he was the first to mutilate the name, as "Puerto de Bucarelli", and which later copyists continued to offer up even more variant spellings (listed below). After Humboldt's usage, the name was simply reapplied without knowledge of Miera's label; even Humboldt had had no understanding of its special geographical context. Some labels that appeared on subsequently copied maps were even accompanied by place-

Obscure; the name *Totonteac* usually pertains to a presumed Indigenous "kingdom". Regarding *Totonteac* see for example, William K. Hartmann, *Searching for golden empires : epic cultural collisions in sixteenth-century America* (University of Arizona Press, Tucson, 2014), p. 271 ff; and Helda B. Barracco, *Os "dourados" de Parima : um problema de anticommunicação* (EBRAESP Editorial, São Paulo, 1978; in Portuguese, which is an ebook only and thus is not otherwise cited in THE GRAND CANON), p. 149.

#### COVERAGE AND FORMAT

name symbols, the result of which was to group the name among Miera's cartographical plotting of many ecclesiastically named campsites of the Domínguez-Escalante expedition of 1776 that circumambulated a good part of the Colorado Plateau. All variants that appear on maps (published and manuscript, cited in the *Cartobibliography*, Volume 2 of THE GRAND CANON), occasionally in other printed matter, are:

Bucarelli

Bucaretti

Bucaretty

Bucuretti

de Bucareli

- P. Bacarelli
- P. Bucarette
- P. Bucaretti

Puerto Bucarelli

Puerto Bucarello

Puerto de Bucareli

Puerto de Bucarelli

Puerto del Bacorelli

Puerto del Bacorilli

S. Bacarelli [perhaps thought to have been a mission, which were actually the Domínguez–Escalante campsites shown on Miera's maps]

BOULDER DAM AND HOOVER DAM The Boulder Canyon Project received its name through legislation of the U.S. Congress. When engineering studies finally identified Black Canyon as the site for the Colorado River dam, the project name was retained and the dam was referred to as Boulder Dam. The project is still administratively the Boulder Canyon Project. In 1930, while laying a ceremonial spike in the rail line from Las Vegas to the Boulder City site, Secretary of the Interior Ray L. Wilbur announced that the name of the dam would be Hoover Dam, to honor Herbert Hoover. After the election of Franklin D. Roosevelt, Secretary of the Interior Harold Ickes in 1933 announced a change back to Boulder Dam. In 1947, President Harry Truman requested Congress to finally, formally name the dam Hoover Dam. In this bibliography, when in English-language titles the name "Boulder Dam" is spelled out, no conscientious attempt has been made in the citation to parenthetically identify it also as "[Hoover Dam]". It will be understood in this bibliography, as it is historically, that the two names are synonymous, and that the appearance of one or the other in a citation or quotation is as originally published. Readers should search for both names.

# NOTES ABOUT THE EARLIEST WORKS (MID-16<sup>TH</sup> CENTURY)

THE HISTORY of the American Southwest is rich, exhaustively studied, rife with political and economic contention and cultural ambivalence. That history necessarily embraces the published records of European and, later, American institutions and writers. Native Americans had as well lived in and journeyed through the Southwest for uncounted centuries before the first European forays into this part of North America in the sixteenth century. But, it is the publishing tradition of Europe that begins documenting the corroborative, citable, and obtainable records of reportable activities and observations carried out in this region at specific times; and so this is our bibliographical starting point.

By far the earliest items cited in THE GRAND CANON are maps from the 1530s. (These appear in THE GRAND CANON Volume 2, *Cartobibliography*.)<sup>35</sup> Of course, this predates the earliest European records of contact with the region of interest here—1539 for the Colorado River, and 1540 for the Grand Canyon. My selection of two pre-dating items closest to 1539, from *circa* 1535 and from 1536, is purposeful. Since maps (including gores for globes) were the first printed materials to convey information about the region, for the sake of comparison I have cited maps that were *recently available* at the close of the 1530s, so as to provide a graphic idea of the European understanding of this part of the world on the verge of the geographical discoveries just noted.

The set of gores for a lost globe, printed without attribution perhaps in Nuremberg *circa* 1535, imaginatively present the west coast of America running westward north of the equator, merging directly with "India" without an intervening ocean.<sup>36</sup> Similarly, gores by Caspar Vopell, printed in Cologne in 1536, depict the same arrangement, with "Hispania Nova" immediately south of and on the same land mass as "Asia Orientalis".<sup>37</sup> This gives some perspective of the knowledge of southwestern North America in the 1530s. To offer citations in the *Cartobiblography* for printed maps earlier than those just mentioned would be superfluous.<sup>38</sup>

<sup>&</sup>lt;sup>35</sup> General maps had been relegated to Part 25 of this bibliography, but now are in Volume 2 of THE GRAND CANON, Cartobibliography of the Grand Canyon and Lower Colorado River Regions in the United States and Mexico. In Volume 1/Part B (Bibliography), readers may refer to Part 25 for information that introduces Volume 2 within the context of Volume 1.

Anonymous. [Set of printed gores for a lost globe.] Nuremberg[?] [ca. 1535], 12 gores. (CARTOBIBLIOGRAPHY ITEM NO. 25.373).

<sup>&</sup>lt;sup>37</sup> Caspar Vopell, *Nova & Integra Universi Orbis. Descriptio.* (Cologne, 1536). [Three sections only of gores for a globe.] (CARTOBIBLIOGRAPHY ITEM NO. 25.374).

As a matter of historical interest, the great map by Martin Waldseemüller, Universalis Cosmographia Secundum Ptholomaei Traditionem Et Americi Vespucii Aliorüque Lustrationes (Strassburg, 1507) — on which "America" appears for the first time — presumptuously depicts a mountainous land beyond the eastern edge of North America, labeled, "TERRA VLTERI9 INCOGNITA"

#### COVERAGE AND FORMAT

The first of the world maps by Sebastian Münster, "Typus Orbis Universalis" (Basle, 1540) portrays "Terra florida" at longitude 260° (contemporary Spanish reckoning) on the western edge of the map; on the eastern edge it continues as "Temistitan", the west coast of which is simply crenulated north–south along the 250° meridian. Correctly it is ignorant of the explorations then underway in the regions of New Spain. At least the American and Asian continents are separated in the northern latitudes by "Oceanvs Orientalis".<sup>39</sup>

The second edition (1542) of Sebastian Münster's geographical work<sup>40</sup>, in which appears a map that depicts the western coast of North America, demonstrates the practical and intentional slowness of communication in that day. The map is still devoid of anything that we would recognize as having come from the Spanish expeditions. In 1542 there was perhaps time enough after the encounters with the Colorado River and Grand Canyon when something *could* have been published, even if only from leaked information or hearsay; but cartography in that day was embedded in and embodied the political secrecy of nations and not readily shared, and just as likely the goings-on at the far end of a remote arm of the sea may not have inspired inquiry. So there is nothing known today from that earliest part of the incursionary period.

The "Ulpius Globe" [WHEAT 4], made in 1542 by Euphrosynus Ulpius probably in Rome, may in effect be seen as a manuscript, in that it is unique. The 15½-inch globe, mounted on a wooden stand, is fashioned in copper with mostly Latin inscriptions, including "REGIONES ORBIS TERRAR QVAE AVT AVETERIBTRADITAE, AVT NOSTRA PATPVQ MEMORIA COMPERTÆ SINT EVPHROSYNVS

(A Further Unknown). On this map these (then-imagined) mountains line the entire west coast of North America. The portrayal is, in fact, more than which was usually shown by mapmakers of the day; the expanses beyond the eastern coast often were conveniently replaced by ornamentation or simply passed off the map sheet altogether. (I am tempted to include this 1507 work in this bibliography since it does figuratively, even if imaginatively, portray the region beyond its horizon that includes the area covered by this bibliography. However, I would also have to include regionally uninformative and superfluous publications between 1507 and 1535, which is not useful.) [Also take note that the Waldseemüller map was copied to create gores for a globe, by Johann Schöner (1517), which are illustrated online by the Library of Congress at <a href="https://www.loc.gov/item/2016586441/">https://www.loc.gov/item/2016586441/</a>. Although these gores are fragments, America is distinctly shown among them, whereon the North American continent is like that of Waldseemüller's, including the modified notation, "VIterius incognita terra"; but it omits the montane ornamentation that abuts Waldseemüller's map edge and substitutes an actual, though imaginative, western coastline on the Pacific.]

- <sup>39</sup> Sebastian Münster, *Geographia universalis vetus et nova . . . Claudii Ptolemaei Alexandrini . . .* Basiliae: Apud Henricum Petrum (1540). (CARTOBIBLIOGRAPHY ITEM NO. 25.375.) [Cartobibliography is THE GRAND CANON Volume 2.]
- Münster, Novae insvlae, XVII nova tabvla. In: Münster, Geographia universalis, vetus et nova complectens Claudii Ptolemaei Alexandrini enarrationis libros VIII. Basileae: apud Henricum Petrum, [2nd ed.] (1542). (CARTOBIBLIOGRAPHY ITEM NO. 25.307.) [Cartobibliography is THE GRAND CANON Volume 2.]

#### COVERAGE AND FORMAT

VLPIVS DESCRIBE BAT ANNO SALVTIS M.D. XLII" (Regions of the terrestrial globe handed down by ancients, or discovered in our memory or that of our fathers delineated by Euphrosynus Ulpius 1542), with the dedication, "MARCELLO CERVINO S.R.E. PRESBITERO CARDINALI D.D. ROME" (Marcello Cervino, Cardinal Presbyter, Sancta Romana Ecclesia, Doctor Divinitatis, Rome). It is well known for its inclusion of the east American explorations that included what today is New York harbor, in 1524, by Giovanni de Verrazano, whose 1529 map was likely used for this globe. As for the southwestern portion of North America, it features today's Mexico as "Nova Hispania" and "Nova Galetia", with no figure of the Gulf of California. Northwest of that region there is undefined openness—plain copper—that likely represents the supposed great western sea, which on this globe is intimated to occupy virtually the whole of the center of North America; its northern boundary is lightly implied but there is no southern boundary. The region would have been effectively unknown to Verrazano, of course, but neither did Ulpius have the information that had recently been acquired from the more recent Spanish explorations.<sup>41</sup>

It was, then, Sebastian Cabot who was the first to produce a map depicting something in the region around the head of the Gulf of California, in 1544. It included information gleaned from the expeditions of Ulloa in 1539 and Coronado in 1540–1542 and thus is the earliest published map known to portray any detail in the region of interest to THE GRAND CANON. Following on this, in 1548 there are two publications that further acknowledge the Colorado River region based on the Spanish explorations; one is dated (yet another edition of Ptolemy's *Geography*), the second is attributed to that year (a map also by Münster).

First-person reports about the Colorado River and the Grand Canyon originate in events of 1539 and 1540, respectively. The seminal event was with Francisco de Ulloa (died 1540), the navigator who in 1539 with ships of the fleet of Hernán Cortés (1485–1547) reached the mouth of the Colorado River at the head of the Gulf of California. His report appeared publicly two decades later in Venice, in 1556, translated into Italian in Volume 3 of Giavanni Battista Ramusio's *Della Navigationi et Viaggi*.<sup>44</sup> Its first English translation was

#### COVERAGE AND FORMAT

published by Richard Hakluyt in 1600.<sup>45</sup> There is, further, a subjective indication that news of the existence of the Colorado River may have been known as early as 1526, when Hernando Cortes wrote to Charles V that while exploring the western coast of California he dispatched a captain whose explorations "penetrat[ed] one hundred and thirty leagues inland", who "described a very large river, which the natives told him was ten days' march from its source, and about which, and the people inhabiting its banks, they told me many strange things."<sup>46</sup>

Europeans' arrival at the Grand Canyon came a year after the Colorado River was encountered, but by land. During 1539–1542 an incursionary army led by Francisco Vázquez de Coronado (1510–1554) infiltrated the American Indian lands on the northern frontier of New Spain in what today is Arizona and New Mexico, venturing even onto the vast Great Plains farther east. As is well recorded historically, they had set out from today's Mexico to rifle Cíbola of its riches, which as the Spanish learned soon enough was only the stuff of misand disinformation about the Indian pueblos.

In 1540, an expeditionary party under Pedro de Tovar traveled from the main army westward to the Hopi mesas in today's Arizona. There they learned about a large river even farther to the west. This was of interest to them as a means to connect with the Gulf of California; the original plans of the expedition included resupply of the armed force by ship on the lower Colorado River, although that never happened. Tovar reported this news and another party, about thirteen men under García López de Cárdenas, was dispatched to investigate. According to an account drawn up decades later, they journeyed twenty days, <sup>47</sup> their Hopi guides leading them to the rim of the Grand Canyon at a point described cursorily

Rivadeneyra (Madrid, 1858), p. 152 (ITEM NO. 2.6582): "... trajo me dió noticia de un muy gran rio, que los naturales le dijeron que habia diez jornadas de done él llegó, del cual y de los pobladores dél le dijeron muchas cosas extrañas."

<sup>&</sup>lt;sup>47</sup> Flint and Flint have suggested that 20 days was written in error for 20 leagues. (Richard Flint and Shirley Cushing Flint, eds., translators, annotators, *Documents of the Coronado expedition, 1539-1542: "they were not familiar with His Majesty, nor did they wish to be his subjects".* Southern Methodist University Press (Dallas, Texas, 2005, ITEM NO. 2.21426).)

#### COVERAGE AND FORMAT

as a place where the Colorado River was visible and where low pines grew. This area is believed by many historians to have been at the eastern end of the canyon at or near the area now called Desert View. Others consider it may have been farther west, given the reported length of the journey and other evidence. This would have been closer to where in the early 20th century William Wallace Bass conducted tourists into the canyon on his mining trails near the Grand Scenic Divide. The Spanish party was likely led along Native Americans' long-established routes through this area; and apparently the guides purposely veered away from culturally significant areas such as the route that led to salt deposits near the Little Colorado River confluence. Grossly underestimating distances in the canyon, Capt. Pablo de Melgosa, Juan Galeros, and a third man whose name was not remembered by the chronicler, tried to descend to the river. They did not make it very far and swore that rock features down there were taller than the Tower of Seville, a landmark familiar to them back home that stood next to the city's cathedral. Without further record of the canyon, at least so far that is known to us today, the party returned to the main force in today's New Mexico.

Not until the 1560s was an account written down about the events of 1539–1542. It appeared in the manuscript "Relación de la Jornada de Cíbola" by Pedro de Castañeda de Nagera, who drafted it while in Culiacán, New Spain. However, the original manuscript is missing; the manuscript that survives today is a copy of it, made in Seville in 1596. In turn the *Relación* did not appear in print for nearly three centuries after the events it records, when in 1838 Henri Ternaux-Compans published a translation in French. An English

<sup>&</sup>lt;sup>48</sup> See items by Ray Kenny in Part 16 of the bibliography. See also Earle Spamer, "`...bigger than the great tower of Seville': Sizing up the 1540 encounter in Grand Canyon", *The Ol' Pioneer* (Journal of the Grand Canyon Historical Society), Vol. 30, no. 3 (Summer 2019), pp. 11-12 (ITEM NO. 2.28399).

<sup>&</sup>lt;sup>49</sup> The tower, *La Giralda*, still stands as part of the cathedral of Seville, Spain. Originally commissioned in 1184 as a mosque, it was completed in 1198. In Casteñeda's day the tower was some three and a half centuries old but still lacked the upper portion of the present structure. A modest belfry was installed after its original ornamental top was felled in an earthquake in 1356. The present belfry, as well as the upper tower and the statue, "Faith", were emplaced in 1558, eighteen years after Coronado's men attempted to reach the bottom of the Grand Canyon. In 1540 the tower was about 300 feet tall. [See also Earle Spamer, "'. . . bigger than the great tower of Seville': Sizing up the 1540 encounter in Grand Canyon", *The Ol' Pioneer* (Grand Canyon Historical Society), Volume 30, no. 3 (Summer 2019), pp. 11-12 (ITEM NO. 2.28399).]

<sup>&</sup>lt;sup>50</sup> Pedro de Castañeda, *Relación de la Jornada de Cíbola* (manuscript). This 1596 manuscript transcription of a lost original written in the 1560s is in the Obadiah Rich Collection of the New York Public Library. Sample pages of it have been published in facsimile during the 20th century. (See Castañeda, 1596, ITEM NO. 2.1909.) There is also another, brief account referred to as the *Relación del Suceso*, from another person who had accompanied the Coronado *entrada* in 1540; it, too, is known only from a 16th century copy (see the transcription and translation in Flint and Flint [Anonymous, 2005, ITEM NO. 2.21428]).

Ternaux-Compans. [Volume 9.] Relation du voyage de Cibola, entrepris en 1540. Inédit. Arthus Bertrand (Paris,

#### COVERAGE AND FORMAT

translation did not appear until three and a half centuries after the events, when in 1896 George Parker Winship published the *Relación* for the first time in both Spanish and English, based of course on the 1596 copy.<sup>52</sup> As one might expect, memory, cultural conventions, translators' liberties, and modern re-readings produce somewhat different perspectives.

After the Cárdenas party left the Grand Canyon no European is known to have gone there for more than two centuries. In 1776 the Franciscan friar Francisco Hermenegildo Tomás Garcés (1738-1781) journeyed from the lower Colorado River region to the lands of the Hualapai, Havasupai and Hopi people. He, fortunately, wrote his own record, though it, too, took a long time to see publication, in 1900.<sup>53</sup>

After all this, there are no surviving maps, save one in manuscript, that document the first European forays into the lower Colorado River and Grand Canyon regions—and that only figures the Gulf of California, hence also the mouth of the Colorado. Perhaps the first document relating to the region considered here contains the instructions from Viceroy Antonio de Mendoza to Hernando Alarcón, regarding logistical support for Coronado's *entrada* into the northern reaches of New Spain. This document, dated May 31, 1541, was not, however, available in print for centuries, thus it cannot be scored as an early "publication". (A particularly reliable transcription and translation of these instructions was published by Richard and Shirley Cushing Flint in 2005.<sup>54</sup>

A map of the Gulf of California was drawn in 1541 by Domingo del Castillo, a pilot in the second expedition that sailed to the mouth of the Colorado River, in 1540. It was found among papers of the descendants of Cortés. Copied and engraved in 1769, it was published in 1770 by Francisco Antonio Lorenzana in *Historia de Nueva-España*. Statillo's is the earliest

<sup>1838). (</sup>ITEM NO. 2.6265.)

#### COVERAGE AND FORMAT

authentic delineation of the Gulf of California and the Colorado River delta region even though it depicts what may be the Gila River as a remarkable extension of the sea that would wrap around the north of Mexico. There are earlier 16th-century maps of the Pacific coast of North America, of course, but none even fully resolve the gulf, let alone the Colorado delta region. $^{56}$ 

A few users of THE GRAND CANON may point to Chinese accounts that putatively record even earlier visits to the Southwest and the Grand Canyon, reached from the West in the 15th century,<sup>57</sup> but such interpretive claims have not held up to historical corroboration by scholars of either the American Southwest or the Orient. In any case, the material on which such claims are based are manuscripts, which would not appear in this bibliography anyway. What *are* cited are the modern publications that include piecemeal translations from, or comments on, those manuscripts.

The 16th-century dates noted in THE GRAND CANON are known with certainty; they establish the beginning of a published history, based on known documents, with which historians and aficionados of the Grand Canyon and the Colorado River are familiar. Might earlier published works yet be found, or more works from the 1540s at least? Perhaps; one may never know what may lay hidden or unrecognized even in the most well-known of collections, or in materials as yet unrecognized by historians and bibliographers.

# EPHEMERA, "UNPUBLISHED", WEB-BASED MATERIAL, AND ARTIFICIALLY-PRODUCED RESOURCES

**EPHEMERA**, such as commercially produced brochures, rack cards, postcards and calendars are not included in this bibliography (with rare exception). While such material is generally widely distributed in numerous copies, thus technically "published", these items are not usually a matter of bibliographical acquisition in public collections. Some special collections do contain these kinds of material as a process of historical gatherings, either by the

<sup>25</sup> of Volume 1/Part A for basic information).

<sup>&</sup>lt;sup>56</sup> A richly illustrated historical discussion of early portrayals of the region of interest here is Dora Beale Polk's *The Island of California: A history of the myth*, University of Nebraska Press (Lincoln, 1991, ITEM NO. 2.5096), although the citations for the numerous manuscript and published maps are imperfect (they are not listed in Polk's bibliography nor identified in detail in the text). The early cartography of the west coast of North America is also very well reviewed and amply (though selectively) illustrated by Justin Winsor, "Discoveries on the Pacific coast of North America", *in* Justin Winsor (ed.), *Narrative and critical history of America. Volume II. Spanish explorations and settlements in America from the fifteenth to the seventeenth century.* Houghton, Mifflin and Co. (Boston, 1886 [ITEM NO. 2.6991]). As Winsor astutely opined, such maps represent "shadowy and unstable surmise long continued" (p. 431).

<sup>&</sup>lt;sup>57</sup> See for example items by Jack Anderson, John Fryer, Hendon Mason Harris, Alexander McAllan, Henriette Mertz, and Charles Hippolyte Paravey, all cited in Part 2 of the bibliography.

#### COVERAGE AND FORMAT

institution or organization which keeps them, or in individuals' collections that are subsequently acquired by institutions or organizations. (However, see the Appendices to Part 26, which provide general guides to 3-D commercial and governmental photographic publications that may be construed to be ephemera.)

Brochures that *are* cited in ths bibliography include widely distributed travelagency literature of the late-19th and early- and mid-20th century (most notably those of the Santa Fe Railway and Fred Harvey), and informational literature produced by government agencies and chambers of commerce. Many of these items are almost like periodicals, frequently and often regularly updated.

"Unpublished" material is defined here as that body of work that has been produced as unique copies. This includes *manuscripts* and unique papers on file in administrative records. None of this material is included in this bibliography (although a couple of special exceptions are noted).

Some professional considerations hold that limited-distribution materials also are "unpublished"; for example, documents that are in the "gray literature" genre reports. However, such items may be available in widely dispersed fashion even if in a limited number of copies, and may be frequently cited, thus it is imperative to cite them in THE GRAND CANON. Similarly, theses and dissertations written as part of an individual's work toward an academic degree or acknowledgment of professional proficiency are cited. They too are technically "unpublished", yet they are important contributions to their subjects and to the history of research. They are are cited in the literature and are as well available digitially online, through microform, or in hard copy through University Microfilms. (Also, in earlier days, sometimes even today in Europe, it was customary to formally print a dissertation through a contracted, commercial, or university printing house, even though it was for very limited distribution.) Further, theses written for bachelor's degree programs, and abstracts from undergraduate or other school-limited symposia may also be considered to be "unpublished", although the event programs may have been distributed in multiple copies. All of these materials mentioned here are nonetheless records of interests in professional activities or programmatic influences in education; thus they are of value to historical researchers. In this bibliography I refer to the theses and dissertations only by their primary degrees—Master's and Doctorates. Many are in specialized aras beyond the usual Master of Arts, Master of Science, and the all-embracing (and frankly antiquarian) Doctor of Philosophy; for example, degrees "of Education", "of Music", "of Literature", "of Art", and so forth. I have thought it more prudent to identify a product for an advanced degree as "Master's thesis" or "Doctoral dissertation", followed by the name of the school or institution that granted the degree.

#### COVERAGE AND FORMAT

Some fields of study do not consider abstracts printed for organizational meetings and colloquia to be "formally" published, while other fields do consider them as bona fide contributions to the work of ongoing research. For example, the abstracts for the American Ornithologists' Union's 123rd Meeting in 2005 notes, "The abstracts in this work are not issued for the permanent scientific record", and Richard A. Young's 2000 compiled volume, Abstracts for a working conference on the Cenozoic geologic evolution of the Colorado River system and the erosional chronology of the Grand Canyon region: June 7-9, 2000, Grand Canyon National Park, Arizona, includes the note, "Many of the abstracts contained in this volume are preliminary, unreviewed working documents and should not be cited as formal references in other research papers." Whereas some notices are meant to insulate authors from the "slips" of changed results and opinions, all abstracts are an important historical record, which preserve the evidence of ongoing research, the individuals doing that work, and where they communicated their findings; and thereby their citations belong in this bibliography.

ARCHAEOLOGICAL DOCUMENTS from during and after the later-20th century may be available to the public only in redacted versions, where culturally sensitive or specific geographical data are removed or physically blacked out. Unredacted versions will be in files accessible to qualified researchers and administrators. If no note regarding redacted parts appears with the document or its citation here, it does not necessarily mean that the document, as seen or as available, does not have data redacted. One may assume that modern publications in scholarly serials already have been written in such a fashion that sensitive or restricted data are left out. Documents or citations that may have been seen by the compilers, but which are not available publicly at all, are not cited in this bibliography. While thus not properly compiling the body of work of individuals and agencies within the scope of this bibliography, a blanket public unavailability of a document leaves it no merit for inclusion within a work such as this one, which identifies publicly accessible materials.

WEB-BASED RESOURCES that are provided in PDF [Portable Document Format], and which items are designed as if they are printed publications (they may also be available in print format) are cited in this bibliography. This is to accommodate numerous kinds of newsletters and various kinds of magazines, as well as scientific and technical journals that employ "doi" (Digital Object Identifier) links, or are otherwise exclusively online but in PDF format. The determining criteria are that they are formatted in uniquely citeable issues, and that copies printed from the PDF will be uniform regardless of where and when they are printed (and thus information cited by page can be reliably found). An assumption is also made that printed or digitally stored copies might be available somewhere in future times, regardless of the medium. When a publisher has produced a publication in both print and digital versions, this bibliography continues to cite information from the print

#### COVERAGE AND FORMAT

version, if only because the digital version may not be permanently available. In cases where publications were issued first in digital format, later in print, the print version is deferred to, for the same reason. Some citations will cite only the digital version (usually with a doi identifier) when that was all that was available.

Most web-based material, however, is in HTML (Hypertext Markup Language) or other formats produced for on-screen display, and may be accompanied by animation, sound, and similar embellishments. Printed versions of these displays can vary greatly and may reselect their content. Also, resources that are exclusively web-based cannot be guaranteed to survive indefinitely, in the manner of printed publications. Internet resources can disappear without notice, either by the renaming of a URL [Uniform Resource Locator], by dismounting the item or the entire webpage from the website, or through the switching off of the website altogether. Should anyone believe that this is not a significant issue, consider the fact that the jurists of the Supreme Court of the United States have in recent times incorporated webpage hyperlinks in their decisions, but some links have since failed due to the removal or migration of the linked material.<sup>58</sup> (This is an issue because Supreme Court opinions create legal precedent, and their cited materials contain the evidence that has led to those opinions.) Similarly, a bibliographical citation to a webpage conveys a record with a sense of availability; if the webpage disappears, the evidence contained in that original document is no longer available to those who seek it. A bibliography containing such dead links is useless except, ironically, as a documentary accounting of lost materials.

Libraries of course have the prerogative to remove some of their holdings from convenient access (such as storing them in remote locations from which they are retrieved when called for), or they may deaccession them altogether through sale or disposal. This is done in individual cases, though, and copies almost always remain held by other repositories. Also, the records are removed from the library catalogs, unlike the constellation of broken links that populate millions of unupdated pages on the web. The disappearance of a single library book is unlike that of web-mounted material that disappears utterly. For web material there is, generally, only a unique "copy" of an item, accessible to all via a hyperlink until it is moved or removed. It might be worthwhile sometime to compile a webography for the Grand Canyon and Colorado River based on a reliable and unambiguous restoration and perpetuation of old and current URLs, but this is far beyond the scope of the present work.

Among the web-based items that are *excluded* from this bibliography are digitalonly books available only as downloads; for example electronic-format books for digital-

Adam Liptak, "In Supreme Court Opinions, Web Links to Nowhere", *New York Times* (September 24, 2013), p. A13.

#### COVERAGE AND FORMAT

tablet readers such as the Kindle<sup>™</sup> from Amazon or the Nook<sup>™</sup> from Barnes and Noble (there are others, the market continually shifts, and product lines disappear), and audiostreaming services such as Audible and Echo through Amazon.com, and web-accessed podcasts. This does not pertain to publications that are released in both print and digital formats. Perhaps a separate portion of an even more expanded bibliography would do well to cite such products that have been made available for e-book readers or online services, with or without a list of formats. However, this too is beyond the scope of the present work, and its utility for users far in the future is uncertain.

Also excluded are audio or audio-visual productions that are available only through the internet; for example, downloadable mp3 files and online streaming services such as Amazon's Prime Video.

Exceptions to the web-exclusion criterion are accorded to very specialized online serials devoted exclusively to the Grand Canyon. These are:

- 1) The *Canyon Sketches* series from Grand Canyon National Park. These separately authored informational bulletins focus principally on park-related activities and history, which have been saved in PDF format and may be downloaded or printed. Pertinent links are embedded into citations in this bibliography, and I have created a personal collection of these as printouts. In all, 24 "volumes" (issues) had been posted to the national park's website, with no additions since 2012.
- 2) *Grand Canyon River Guides*, an electronic newsletter from the Grand Canyon River Guides organization (Flagstaff), began with the "2010 Winter Issue" (December 2010). (It ambiguously, perhaps accidentally, reintroduced the title of the organization's original newsletter, *Grand Canyon River Guides*, that later became the serial *Boatman's Quarterly Review*. For additional information see within the section, <u>Name Changes and Numeration</u> Notes for Selected Periodicals and Serials.)

ARTIFICIALLY-PRODUCED RESOURCES are rarely cited. (See also the separate section herein, "Publications Printed on Demand and Reliance on Artificial Intelligence" [p. 134].) These are productions that are, or probably were, created with the use of Artificial Intelligence and similarly labeled non-human assistance. For example, in 2023, Amazon.com promoted a title, Summary of Brave the Wild River, which was only a contrived "summary and analysis" of the book by Melissa L. Sevigny, a biographical sketch about botanists Elzada Clover and Lois Jotter on a Nevills Expedition trip on the Colorado River through Grand Canyon. The contrived summary was seen in November 2023; one by "Ben Isaac", with a cover photo of two young women sitting on a wall alongside an undefined riparian stream (certainly neither the Colorado River nor the Grand Canyon), the other, with no cover illustration, by "John L. Lemon". The first title advertises in broken English, "This is not a book by Melissa

#### COVERAGE AND FORMAT

L. Sevignys nor is it affiliated with them. It is an independent publication that summarizes Sevigny's book in details." The second title, in similarly broken English, advertises, "This is an independent publication by John L. Lemon that summarizes Melissa L. Sevigny's book in details[.] The contents of the outline is never to supplant the original book but rather to help readers figure out a smart read. This outline has been approximately created nailing down the fundamental central issues and realities, and summoned to assist developing comprehension you might interpret the book." A Kindle electronic tablet version attributes the author as "LIFE Summary" and adds to the unillustrated title image, "(A guide to Melissa L. Sevigny book)"; it also noted—citing a different "author": "Disclaimer!! This is not a book by Melissa L. Sevigny, nor is it affiliated with them. It is an independent publication by Nora Alonzo that summarizes Melissa L. Sevigny's book in detail. It is a summary. The contents of the outline are never to replace the original book but rather to help readers figure out a smart read. This outline has been approximately created nailing down the fundamental central issues, and realities, and summing up subtleties to assist in developing comprehension you might interpret the book." Such productions are not cited in this bibliography, but this note is added here as a matter of contemporary bibliography focusing on one conventionally published title. Note the various attributed authors and similar (though not perfectly identical) disclaimers. This bibliographical note also serves as a cautionary example of what probably are artificially produced texts that may be of interest to humans who will research the evolution of AI, a technology that demonstrably can do terrible disservice to works that are more rigorous, human-guided surveys (not to overlook the intents and intellectual rights of the original authors!).

# **NEWSPAPERS**

Newspapers are not generally included in THE GRAND CANON. Exceptions are *The New York Times*, which is accorded its own section in this bibliography (see below), and citations from the earlier years of the *Deseret News* (Salt Lake City), which are placed within pertinent parts of the bibliography (also see below). In other instances a newspaper is cited in THE GRAND CANON if an article had been reprinted later in another periodical; the original source is acknowledged in a comment at the end of the citation.

Special-interest newspaper-format periodicals are included in the bibliography; for example, *High Country News*, for a while a biweekly serial on newsprint (later in magazine format, and later as a monthly serial). Some weekly newspapers, and weekly magazines included with newspapers, are also cited; for example, *Computerworld*, and *Flare* from the *Arizona Daily Sun* (Flagstaff).

#### COVERAGE AND FORMAT

Part 31 of THE GRAND CANON (Newspaper Guide) comprises a listing of regional newspapers that some readers may wish to use to begin locating local or (sometimes) online sources of published information.

THE NEW YORK TIMES. From *The New York Times* as many pertinent articles as possible have been cited in so far as they relate to the Grand Canyon and lower Colorado River. This newspaper was published from the beginning of modern excursions into the region, in the mid-19th century. It is as well a well-recognized periodical that is widely available online and through microformed products. The *Times* is relegated to its own section of this bibliography (see Part 3); one section is arranged chronologically. When this bibliography was started in the 1970s, the only practical way to access back issues of the *Times* was on microfilm, which for this title was widely available and thus a prudent addition to this bibliography. Now the *Times* is wholly accessible online,<sup>59</sup> although for recent years not always in facsimile presentation or sometimes omitting appropriate pagination. The online records, though, are completely searchable. The online material includes ephemeral, online-only articles (not listed in THE GRAND CANON).

THE DESERT NEWS. A purposeful comparison has been made in this bibliography to include citations from a western regional analog to The New York Times, this being the Deseret News (Salt Lake City), the oldest continuously published newspaper in Utah, now a daily production. Citations from the Deseret News are included as appropriate within the subjectspecific sections of the bibliography. The Deseret News's earliest years (1850-1910) are now freely available online. 60 THE GRAND CANON includes pertinent citations from these years because, like the *Times*, they cover the period beginning with modern explorations of the region. Deseret News (originally a weekly, becoming semiweekly in 1865 and daily in 1899—although earlier it was concurrently a weekly and semiweekly as *The Deseret News* and daily as *The Deseret Evening News*) is cited in THE GRAND CANON as *Deseret News*; mostly from the weekly edition. Its citations to 1910 include many articles and notes that relate to the geographical coverage area of THE GRAND CANON. They are important to include because they have a Mormon perspective of concerted efforts of church and individuals to colonize and economically develop the resources of the region beyond the Utahn border, from Lees Ferry to deep along the lower Colorado River corridor. As well, the selection of news items reflects Deseret News's editorial slants on activities in neighbor states and the lower Colorado River corridor. Most telling is the newspaper's own Prospectus, which intended the periodicals to be *documents of record* from the start: "A paper that is worth printing, is worth preserving; if worth preserving, it is worth binding; for this purpose we issue in pamphlet

<sup>59</sup> http://www.nytimes.com.

<sup>&</sup>lt;sup>60</sup> Utah Digital Newspapers, <a href="http://digitalnewspapers.org">http://digitalnewspapers.org</a>.

#### COVERAGE AND FORMAT

form; and if every subscriber shall preserve each copy of the 'News,' and bind it at the close of the volume, their children's children may read the doings of their fathers, which otherwise might have been forgotten; ages to come."<sup>61</sup> Today, the complementary idea of binding is the searchable digitized page; for the next age.

Since most of the citations from the *Deseret News* have been taken from the online postings of the weekly editions of this newspaper, take note that the pagination reflects the pages as counted in each online issue. This is because the online postings do not usually preserve original pagination. In actuality, the newspaper is paginated, at least in its early years, consecutively through entire volumes. To accommodate this lack of online pagination, notations have been inserted into the citations in this bibliography noting "issue pagination", which begins with page 1 of each issue counted in the online postings. Users who refer to an issue will have to count forward from the first page to reach the item in question.

# **CITATIONS**

When I began compiling this bibliography in 1974 I used a simple citation style. It mimicked the format with which I was familiar as a beginning student in geology; specifically, the editorial style of the Geological Society of America, which employed abbreviations, general lack of italics, and citing authors' given names only by their initials. I carried forward with this style for a while before abandoning it in favor of a style contrived to display more information. Not until I prepared sequel typescripts for what became the 1990 second edition of the bibliography (*Grand Canyon Natural History Association Monograph 8*) did I attempt to remedy this situation throughout with more standardized citations. After all, what is in a citation provides the information necessary to find the publication; and the style of citation, frankly, does not matter so long as the item cited can be accurately recognized. Beyond that basic information, a well crafted citation can provide a visual idea of the physical format of the work, and it can provide specific bibliographical or contextual information that may be useful to a researcher. If the citation is elaborated with more information it can record historical information beyond physical and bibliographical parameters.

Informal typewritten supplements followed the 1981 first edition, including one supplement in the late 1980s that was composed of physically cut-and-pasted entries on paper, physically arranged on sheets and photocopied. A few copies of each were distributed. The 1990 second published edition of the bibliography saw the first large-scale re-editing of the bibliography, including rearrangement into new categories. "Supplement 1 (1992)", published in 1993, carried forward in the same format. There were no further supplements.

<sup>&</sup>lt;sup>61</sup> Prospectus. Deseret News. *Deseret News*, Vol. 1, no. 1 (June 15, 1850), p. 1.

#### COVERAGE AND FORMAT

In the late 1990s, with a move toward a digital edition of the bibliography, I undertook a wholesale re-editing of the bibliography again; its citations as well as the categories represented in it. Originally conceived as for distribution on CD-ROM, this became the Internet Edition, which was a searchable database posted to the Grand Canyon Association website in January 2000. with its own domain www.grandcanyonbiblio.org; and to that edition emendations and additions were made frequently until mid-2015, when technological issues precluded updates. The website was removed in October 2021.

THE GRAND CANON continues to be improved in its digital manuscript form, with further editing, revisions, and layout changes; this is the product that you have in front of you now. In the 3rd edition I had made thousands of modifications to citations, including some attempts to gain more uniformity in content and presentation, and now even more in the 4th edition. In 2021 I also reformtted the citations of cartographic products and created THE GRAND CANON Volume 2, the Cartobibliography.

Bear in mind that the overall citation style in this bibliography is but one general style for citations; it is not a mandate. One has only to pick up any number of books and journals to see tremendous variations of style. The main, utilitarian purpose of citations is to provide the information necessary for readers to re-locate the item there cited, to provide documentary credit to the item's creators and publishers/distributors, and to provide the kinds of information that may be summarized for administrative uses.

The citations in THE GRAND CANON are formatted to answer several basic questions: Who created the item? When was it published? What is it about? (which depends upon titles, which may be adequate, inadequate, literarily embellished, or obtuse). Who takes responsibility for publishing it? What is the item's physical extent and format if not in inkprint? Are there any remarks to be made about this publication? These are routine questions, but they document the origin, context and potential value of the item to researchers.

Alphabetization is followed purely, regardless of whether or not a letter has a diacritical mark on it (rather than some non-English orderings that alphabetize letters with diacriticals following "z"). And of course, the authors of works whose names are in non-Roman characters are shown alphabetically by their romanized transliterations, usually with their original orthographies appended for precise information.

In compiling a bibliography, some key but arbitrary decisions must be made regarding the structure of the citations. The citations in THE GRAND CANON are constructed not so much for the use of bibliophilic collectors as they are for those who usually use library catalogues and online databases when they search for information and references. For example, citations here do not carefully reconstruct the layout of title-pages nor record the

#### COVERAGE AND FORMAT

physical construction of the product, although any peculiar information that I have deemed important or interesting will be appended to a citation as a note. Data are not usually extrapolated; for example, to fill in within one citation what is otherwise known actually or intuitively from other citations. This omission is done so as to preserve the data present with each particular document, for it is with these data that a document will usually be catalogued and made available in libraries and other repositories (the catalogers having to depend only on what is before them). When further data are in fact known, they may be added within parenthetical notes, as a matter of assistance rather than one of systematic bibliography.

One unsettling kind of encounter with indexed citations gathered from other sources is the contrived title. There the citationist has restated or edited a published title to convey some sense of additional information or perceived utility, sometimes as a matter of editorial prerogative. It is never noted that the title has been altered. This is not advisable. The contrived title, when cited, will cause confusion when others go to look for it, particularly those who may be unaware of the lack of precision or who are mechanically looking for the item and "not finding it". In some cases, a subtitle or explanatory note added to a title may be rephrased; likewise, this destroys the original information.

Following are a number of examples from this bibliography, where I had originally depended upon a fully collated (and presumably correct) index to publications but which, later, were found to be inaccurate. Most of these examples are from a single serial, but there are numerous others. I have strived to correct all such instances that came to my attention, but in the bibliography there surely are some others. At least, the serial title and other pertinent information like dates and issue numbers needed to locate the item are correct. In these examples (below), THE GRAND CANON's Item number is also given. In each case, the title as *originally* cited in this bibliography (now known to have been contrived by my original source, when I had not yet seen the actual item) is shown first, in regular print, followed in **bold** by the title as it actually appears and as is **now cited** (some with further corrections).

2.111 Needles to Topock, Arizona. *Touring Topics* (Automobile Club of Southern California, Los Angeles), (April): 12.

Oatman, newest gold camp, attracts thousands; steady motor procession traverses eastern California roads to boozeless boom town in Bonanza District of western Arizona. *Touring Topics* (Automobile Club of Southern California, Los Angeles), 8(3) (April): 9-12.

[In this example, it seems that the revised title had been created to bring notice only to a portion of a sketch map of the region, which showed roads that may be traveled between the two towns of Needles, California, and Topock, Arizona.]

2.5349 Canyon music. *Backpacker*, 22(3): 82.

In concert with nature; the music of Beethoven and the canyon wren harmonize when you're rafting down a river with a string quartet. (Photography by Tom Bean.) Backpacker, 22(3)(131) (April): 82-87. [Chiefly about a trip on the Dolores River, but includes the Colorado River in Grand Canyon.]

2.18659	"The devil is coming"; paddle-wheelers on the Colorado. Wild West, (August): 38-44. [This article has also appeared in various websites online in text-only format with the title, "Paddle-wheelers Appeared on the Colorado River in 1852", and credited to Wild West.]		
2.25793	A report as to Boulder City, Nev. U.S. 81st Congress, 2nd Session, Senate Document 196.		
	Boulder City, Nevada, a federal municipality: a report of a survey made under the direction of the Bureau of Reclamation of problems affecting Boulder City, Nevada. <i>U.S. 81st Congress, 2nd Session, Senate Document 196</i> , 236 pp.		
11.3668	A predatory drillhole in the lingulid <i>Glottida palmeri</i> , Dall (Brachiopoda; Inarticulata) from the Recent tidal flats of the lower Colorado delta, northeastern Baja California, Mexico.		
	A predatory drillhole in <i>Glottidia palmeri</i> Dall (Brachiopoda; Lingulidae) from Recent tidal flats of northeastern Baja California, Mexico.		
	[The original citationist chose to reword the title to reformulate the taxonomic identification of a lingulid brachiopod species as a member of the Class Inarticulata, and to specify that it occurs in the Colorado River delta.]		
11.8777	The geography of the Imperial Valley of California.  The Imperial Valley of California: An example of geographic instability		
12.87	Mechanical ditching a failure, Imperial Valley.  Mechanical ditching not always cheapest.		
12.88	Cost of dredging ditches in Imperial Valley.  Give costs of dredging irrigating ditches.		
12.89	Danger for Colorado River levees predicted.  Predict danger for Colorado River levees.		
12.90	Imperial Valley levee breaks, damage slight.  Breaks in Imperial Valley levee cause slight damage.		
12.91	Laguna Dam to irrigate 200,000 acres more.  Laguna Dam to irrigate 200,000 additional arid acres.		
12.92	All-American Canal surveys.  Surveys for an all-American Imperial Canal.		
12.93	Imperial Valley levees raising urged.  Urge raising of Imperial Valley levees.		
12.94	All-American Canal to Imperial Valley.  All-American canal for Imperial Valley.		
12.95	Volcano Lake levee to be raised.  Will raise Volcano Lake levee to protect Imperial Valley.		
12.96	Imperial Valley canal to connect with Laguna Dam.  To connect Imperial Valley canal system with Laguna Dam.		
12.97	Imperial-Laguna Dam Canal, estimate of cost.  Estimating the cost of the proposed Imperial-Laguna Dam connection.		

#### COVERAGE AND FORMAT

12.98 Imperial Valley-Laguna Dam contract drawn.

Tentative Imperial Valley-Laguna Dam contract drawn.

[Not only is the indexed title not precise, but the actual title indicates that the contract is tentative, not a completed contract as suggested by the contrived title.]

12.135 Colorado River problems being studied actively.

Engineers active in study of Colorado River problems.

12.2737 Dam the Colorado River in Grand Canyon.

Dam Colorado River in Grand Cañon.

12.1383 [Anonymous] Driving 56-ft. tunnels for Hoover Dam.

[Nelson, Wesley R.] Excavation of diversion tunnels for Hoover Dam.

r 19.1135 Miscellaneous notes. Grand Canyon Nature Notes, 5(5): 53. [Early flowers.]

2.25628 [Marriage engagement announcement for Patricia Mead and Preston P. Patraw, who proposed to her at the "Abyss of Matrimony".] *Grand Canyon Nature Notes*, 5(5) (March): 53.

[In this case the indexer for *Grand Canyon Nature Notes*, from whose work citations from this serial were first gathered for this bibliography in the 1970s, misconstrued the various mentions of flowers, field trips, and seed-germination experiments by Miss Mead as being a titleless news item about Mead's continuing work. In fact, the item (titleless) is a witty, flowery announcement of Mead's marriage engagement. The citation is now revised, removed from Part 19, and renumbered for Part 2, as shown here.]

19.2178 A new species of *Astragalus* from the south rim of the Grand Canyon. *Leaflets of Western Botany*, 5: 83.

Pugillus Astragalorum IX: Novelties in *Batidophaca* Rydb. *Leaflets of Western Botany*, 5(5): 82-89. [Includes *Astragalus cremnophylax*, new species (pp. 83-85), from ca. 2 miles west of El Tovar, Grand Canyon.] [Sentry milkvetch.]

[In this case the citationist completely contrived a title to take note of another author's description of a single new species, *Astragalus cremnophylax*, citing only the page on which that name first appears. Actually, the entire species description appears on pp. 83-85 and is within a longer paper (pp. 82-89) that includes other material not pertinent to this bibliography.]

The author (or other creator, which may be an organizational entity or branch of government) is the distinguishing and responsible authority for a work. A bibliography should function as an evidentiary record of the work of individuals, organizations, and agencies. Of course, a bibliography does not have to list things by author or creator, but inasmuch as this is a world investigated and manipulated by individuals, including those who populate organizations and agencies, it is sensible to account for their productive activities according to the names of the creators responsible for published works. These people or organizations may not be the actual writers (or creative sources) of items; for example, most official notices in the *Federal Register* are signed by accountable administrators, who have "signed off" on the notices published in that organ, though in that bibliographical sense they are "authors". (Occasionally, *Federal Register* items do specify an author, or a responsible team, for a particular item.)

Second, a title usually must precisely replicate the title as shown in the publication. If it does not carry a title, as is the case of many news notes, a descriptive title contrived for the

#### COVERAGE AND FORMAT

bibliography is placed within [square brackets]. Authors' and publishers' conventions are retained as printed. Thus they record variances of spelling, misspelling, mispunctuation, and any other particular usage. I have been as faithful as possible to the originals (within some arbitrary bounds of pragmatism) in order to communicate just what was seen when the work was entered into the bibliography. Notations may be added to a citation to assist in identifying more precisely a specific work or its content, which will aid not only the user who seeks it but the librarian who may be asked to locate a copy. Inasmuch as different cataloging schemes are followed in various libraries (despite the existence of "standard" methods), the librarian may discern from the citations here just how a work may be found employing that librarian's resources.

Spellings of proper names are likewise cited as they appear in the printed works; most noticeable in THE GRAND CANON will be the distinction between "Canyon", "Cañon", and "Canon" (with initial capital letter). While I might have made it expedient for those who do electronic searches, by standardizing all of these as "Canyon", it is not faithful to the original. Furthermore, there can be devised technological ways of returning all of these spellings in a generalized search for any one of them, albeit this may tender some expense of programming since this is not now the norm. I am in any case firmly of the belief that future technologies will accommodate these variances with greater ease, and there is no need to forego now the accuracy of precise title quotations. I wholly disagree with decisions that allow the limitations of current technology to determine the structure of a work; such subservience makes the useful life of the work much shorter. (Some users may recall the days—not so long ago when short or rigorously defined "field lengths" in databases required the invention of contorted abbreviations and other short-cuts for data that are now entered fully.) Presentday users will also have to forgive the cumbersome reliance on ASCII character entities. numerous subsets of which have been devised to accommodate pe; culiar diacritical marks, non-Roman orthographies, and the special-needs characters of scientific study. Some present-day search engines accommodate the use of diacritical marks seamlessly; they will locate "Société" or "Tíyo" whether spelled thusly or as "Societe" or "Tiyo". Still, the originals decide the usage in THE GRAND CANON, and it will be only a matter of time before technology will catch up with the ability to search one for the other using character entities rather than dual-composition characters. For that reason, if not just for the adherance to "original format", I have avoided including dual typographies in citations because they would be aesthetically unpleasing, eventually moot. I have not used dual-composition characters such as are used in some online databases; for example, the diacritical letter é will be composed of "e" and "'" that display together as "é", such that both "e" and "é" may both be found when "e" is used in a search. However, the technological longevity for retaining the association of dual-composition characters is uncertain, so I exclusively use letters with uniquely assigned character codes, like "e" and "é" (Unicode 0065, 00E9, respectively), to better ensure the

#### COVERAGE AND FORMAT

longevity of the presentation of names and titles as published. Future technology surely will permit the automatic identification of Unicode 0065 *and/or* 00E9, as needed, rather than the arbitrary "e" or compound "é".

As a matter of style I have for the most part cited the ampersand "&" as "and" unless there is a specific reason to retain the ampersand (for example, in the names of railroads where convention calls for the ampersand, or similarly, citing information from older maps or in direct quotations).

In describing the publications (or in a few special instances, manuscripts) that are composed of enumerated leaves rather than unique pages (that is, one leaf of paper contains one number, with its recto and verso), I have preferred to note them as "leaves" rather than the more usual bibliographical convention, "folios"; this because for many users of this bibliography who are unaware of the distinction, they could confuse the "folio" leaf with the "folio" format of publications that employ very large paper sizes.

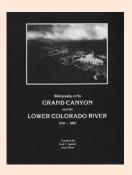

And finally, the bibliography is presented in a less myopic type size, and in one column, differently than might have been used in a formally printed book. (See for example the dual-column and much smaller type size used in the original print volumes of this bibliography, from 1981, 1990, and 1993<sup>62</sup> (examples appear on the following pages). In digital form, there is no added expense to the increased number of pages. All readers with sight limitations may also appreciate the extravagance, and PDFs may be enlarged or diminished at will.

The first inkprint edition of this bibliography, in 1981, had its citations in an 8-point serif font on 9-point line spacing ("8 on 9") in two columns. The 1990 2nd edition was produced with a slightly more generous 9 on 10 in two columns. THE GRAND CANON bibliographical citations are displayed in a sans serif font (Verdana), 8 on 11 in a single column, which offers greater legibility and easier browsing; and further, citations under a first-author's name are grouped between horizontal rules. Anonymously written items are grouped in years separated by rules. Additionally, in its digital format as a PDF document THE GRAND CANON may be scaled to any screen size (larger or smaller, as the reader wishes) without degrading the resolution, and the work may be viewed in side-by-side pages on-screen if desired. Pages may be scaled for printing as the user desires.

#### Ives, Joseph C.

1861 2.3584

Report upon the Colorado River of the West, explored in 1857 and 1858 by Lieutenant Joseph C. Ives, Corps of Topographical Engineers, under the direction of the Office of Explorations and Surveys, A. A. Humphreys, Captain Topographical Engineers, in charge. By order of the Secretary of War. Washington, D.C.: U.S. Government Printing Office, 5 parts and four appendices in 1 volume, 2 maps. (Volume: U.S. 30th Congress, 1st Session, House Document 90.) (Serial 1058, Volume 14.) [HOUSE OF REPRESENTATIVES VARIANT.] [The same report was also released as Senate Executive Document [no number]; see ITEM NO. 2.3585.] [Sabin (citation follows) cites this publication only with the imprint, "Washington. 1861.", without notice of either the House or Senate variants that exist. Other than the inclusion of two extra maps in the Senate variant, and the banner on the title-page, there is no difference between the printings. In addition, Sabin indicates only "Map." (Joseph Sabin, A Dictionary of Books Relating to America, from Its Discovery to the Present Time. Volume IX. (J. Sabin and Son, New York, 1877), p. 167.)] [Poore (citation follows) likewise, but by design (p. iii), does not differentiate between the two Congressional variants, although it is listed as "Ex. docs., No. 90 36th Cong., 1st sess., Vol. XIV" (p. 780). Poore gives the pagination as 333 pp., with "map", and a publication date of June 5, 1860, which likely is the date ordered to be printed. (Poore, Benjamin Perley, A Descriptive Catalogue of the Government Publications of the United States, September 5, 1774-March 4, 1881 (Washington, D.C.: U.S. Government Printing Office, 1885. U.S. 48th Congress, 2nd Session, Senate Miscellaneous Document 67.)] • HOUSE OF REPRESENTATIVES VARIANT. Parts and appendices paginated as follows: title-page, p. [1]; resolution of the U.S. Senate regarding printing information, attested by Asbury Dickins, Secretary, p. [2]; letter of transmittal from John B. Floyd, Secretary of War, p. [3]; letter of transmittal from Ives, pp. [5]-6; Part I, "General Report", by J. C. Ives, pp. [9]-131; Part II, "Hydrographic Report", pp. 1-14 (NOTE: hydrographical work was conducted by Casimir Bielawski); Part III, "Geological Report", by J. S. Newberry, pp. 1-154; Part IV, "Botany", by "Professors Gray, Torrey, Thurber, and Dr Engelmann", pp. 1-30 (Asa Gray, John Torrey, George Thurber, George Engelmann); Part V, "Zoology", by S. F. Baird, pp. 1-31 (specifically only "List of Birds Collected on

#### COVERAGE AND FORMAT

the Colorado Expedition"); Appendices cover sheet, p. [1]; Appendix A, "Remarks upon the Astronomical Observations", by G. P. Bond, pp. 3-4 (NOTE: astronomical work was conducted by Paul H. Taylor); "Remarks upon the Barometric Observations", pp. 4-5; Appendix B, "List of Camps, with Distances, Latitudes and Longitudes, Altitudes, etc.", pp. 6-8; Appendix C, "Barometric and Meteorological Observations", pp. 9-31 (NOTE: meteorological work was conducted by C. K. Booker); Appendix D, "Remarks upon the Construction of the Maps", p. 33. With two maps: "Map No. 1. Rio Colorado of the West", drawn by Frhr. F. W. v. Egloffstein, scale 1:380,160, shaded relief (from mouth of Colorado River to head of navigation); "Map No. 2. Rio Colorado of the West", drawn by Frhr. F. W. v. Egloffstein, scale 1:760,320, shaded relief (from head of navigation to Fort Defiance, including Grand Canyon).] • [For citations of the topographic maps see Egloffstein (1861, CARTOBIBLIOGRAPHY ITEM NOS. 25.493, 25.494). Cartobibliography is THE GRAND CANON Volume 2.] [NOTE: Two geologic maps, which are the Egloffstein topographic maps with overprinted geology portrayed by Newberry, accompany only the Senate Executive Document variant (fide WAGNER-CAMP 375, p. 648), for a total of four maps with the Senate variant (ITEM NO. 2.3585).]

1861 2.3585

Report upon the Colorado River of the West, explored in 1857 and 1858 by Lieutenant Joseph C. Ives, Corps of Topographical Engineers, under the direction of the Office of Explorations and Surveys, A. A. Humphreys, Captain Topographical Engineers, in charge. By order of the Secretary of War. Washington, D.C.: U.S. Government Printing Office, 5 parts and four appendices in 1 volume, 4 maps [see note on collation of maps, below]. (Volume: U.S. 30th Congress, 1st Session, Senate Executive Document [no number].) [SENATE VARIANT.] [The same report, accompanied only by the two topographic maps, was also released as House Executive Document 90; see ITEM NO. 2.3584.] [Sabin (citation follows) cites this publication only with the imprint, "Washington. 1861.", without notice of either the House or Senate variants. Other than the inclusion of two extra (geological) maps in the Senate variant, and the banner on the title-page, there is no difference between the printings. In addition, Sabin indicates only "Map." (Joseph Sabin, A Dictionary of Books Relating to America, from Its Discovery to the Present Time. Volume IX. (J. Sabin and Son, New York, 1877), p. 167.)] [Poore (citation follows) likewise, but by design (p. iii), does not differentiate between the two Congressional variants, although it is listed as "Ex. docs., No. 90 36th Cong., 1st sess., Vol. XIV" (p. 780). Poore gives the pagination as 333 pp., with "map", and a publication date of June 5, 1860, which likely is the date ordered to be printed. (Poore, Benjamin Perley, A Descriptive Catalogue of the Government Publications of the United States, September 5, 1774-March 4, 1881 (Washington, D.C.: U.S. Government Printing Office, 1885. U.S. 48th Congress, 2nd Session, Senate Miscellaneous Document 67.)] • SENATE VARIANT. Parts and

#### COVERAGE AND FORMAT

appendices paginated as follows: two shaded-relief maps (fold-out) [see below]; titlepage, p. [1]; resolution of the U.S. Senate regarding printing information, attested by Asbury Dickins, Secretary, p. [2]; letter of transmittal from John B. Floyd, Secretary of War, p. [3]; letter of transmittal from Ives, pp. [5]-6; Part I, "General Report", by J. C. Ives, pp. [9]-131; Part II, "Hydrographic Report", pp. 1-14 (NOTE: hydrographical work was conducted by Casimir Bielawski); Part III, "Geological Report", by J. S. Newberry, pp. 1-154; two geologic maps (fold-out) [see below]; Part IV, "Botany", by "Professors Gray, Torrey, Thurber, and Dr Engelmann", pp. 1-30 (Asa Gray, John Torrey, George Thurber, George Engelmann); Part V, "Zoology", by S. F. Baird, pp. 1-31 (specifically only "List of Birds Collected on the Colorado Expedition"); Appendices cover sheet, p. [1]; Appendix A, "Remarks upon the Astronomical Observations", by G. P. Bond, pp. 3-4 (NOTE: astronomical work was conducted by Paul H. Taylor); "Remarks upon the Barometric Observations", pp. 4-5; Appendix B, "List of Camps, with Distances, Latitudes and Longitudes, Altitudes, etc.", pp. 6-8; Appendix C, "Barometric and Meteorological Observations", pp. 9-31 (NOTE: meteorological work was conducted by C. K. Booker); Appendix D, "Remarks upon the Construction of the Maps", p. 33. The four maps are: "Map No. 1. Rio Colorado of the West", drawn by Frhr. F. W. v. Egloffstein, scale 1:380,160, shaded relief (from mouth of Colorado River to head of navigation); "Map No. 2. Rio Colorado of the West", drawn by Frhr. F. W. v. Egloffstein, scale 1:760,320, shaded relief (from head of navigation to Fort Defiance, including Grand Canyon); "Geological map no. 1.", by J. S. Newberry, scale 1:760,320; "Geological map no. 2.", by J. S. Newberry, scale 1:760,320 (the base maps of the geologic maps are the Egloffstein shaded relief maps).] • [NOTE on collation of maps. Although some sources may indicate that the maps are laid in loose, the copy of the Senate variant held in the American Philosophical Society, presented by J. S. Newberry, is in its original binding, wherein the two Egloffstein topographic maps are fold-outs following the second free leaf of the volume, preceding the plate titled "General Report; Profile" and the frontispiece. The two Newberry geologic maps are fold-outs following Part III of the volume.] • [For citations of the topographic maps see Egloffstein (1861, CARTOBIBLIOGRAPHY ITEM NOS. 25.493, 25.494).] [For citations of the geologic maps see Newberry (1861, ITEM NOS. 24.146, 24.378), which are also cited in the Cartobibliography. Cartobibliography is THE GRAND CANON Volume 2. The two geologic maps are the Egloffstein topographic maps with overprinted geology portrayed by Newberry. They accompany only the Senate variant (fide WAGNER-CAMP 375, p. 648), thus four maps accompany the Senate variant; further corroborated by Farquhar's citation of the House Executive Document variant (FARQUHAR 21) that notes only two maps (see ITEM No. 2.3584). (Farguhar does not cite the Senate variant.)] • [NOTE on binding. The original binding of the Senate variant has a unique spine, embossed and stamped as follows (gilt): [ornamental rule] / SENATE. / [ornamental rule] / COLORADO / EXPLORING / EXPEDITION / [rule] / J. C. IVES, / TOP<sup>L</sup>. ENGINEER. / [rule] / 1857-8. / [ornamental rule] / [ornament, 8-pointed star in symmetrical design] / [ornamental rule] / WAR / DEPARTMENT. / [ornamental rule].]

\_\_\_\_\_

ABBREVIATIONS AND ACRONYMS: One of the more noticeable edits that I have made to the citations since the 1981 edition is the elimination of all but the most standard abbreviations. The abbreviations "ed." or "eds." remain for editors, and likewise "ed." remains for "edition". In context there is no confusion. Spelling out these particular abbreviations seems very peculiar anyway. All other abbreviations are spelled out so as to ensure they are unambiguous, especially for users who may not be familiar with the conventions; for new users such as students who have not yet encountered the often-problematical proliferation of abbreviations in bibliographical citations (see next section); and for administrative and casual users who may not know any of these things.

I do not use the librarians' conventions "s.l." and "s.n." for information relating to absent places and names of publishers in the imprint information. Many modern users no longer know the meanings—"s.l." is an abbreviation of the Latin sine loco, or "without a place", specifying that the place of publication is not indicated in the publication or that it is otherwise is undetermined; "s.n." is an abbreviation of the Latin sine nomine, or "without a name", specifying that the publisher is not indicated in the publication or that it is otherwise undetermined. While these Latin abbreviations are used widely in the library community, they are ambiguous to those who do not know what they mean, among whom will be those who may not usually encounter these terms, and new generations of researchers who for various reasons are no longer being routinely exposed to the usages employed by professionals in other fields. As like my avoidance of abbreviated citations (see next section) to aid readers who may not understand the abbreviations, in THE GRAND CANON I use "[no place]" instead of s.l., and "[no imprint]" instead of s.n. I also use "[no imprint]" to designate the absence of both place and publisher; the distinction is clear in context. Many sources today employ "n.p." for "no place"; and similarly, "n.d." for "no date". For the latter, I spell out "NO DATE" in the date field of the citation. Again, I stand on the side of modern and unacquainteduser convenience.

I retain the use of "[sic]" for designating some precisely quoted information, by convention, because there is nothing shorter nor devoid of ambiguity. Many writers, even casual users, still rely on sic, although sometimes mistakenly with a period, "sic." (it is not an abbreviation). But sic is Latin for "thus", to mean "exactly as used"; accordingly it should be used to acknowledge "yes", as a corroborative note that the information is as shown. Many users believe that it is used only to indicate an error, but sic is also used to signal a feature in

#### COVERAGE AND FORMAT

a citation that may be misconstrued for something else. For example, one citation of a book in German includes this note:

See "Southern pacific of California" [sic], pp. 93-95; "Atlantic und Pacific" (pp. 96-100).

Using "sic" in this case corroborates the lack of capitalization of "Pacific" and its English-language phrase in odd juxtaposition with the German translation of "Atlantic and Pacific"). I also sometimes use a terminal "thus" when it has seemed more appropriate in context; for example, the citation for an article published in Thai but which with its serial has a title only in English includes the note, "[In Thai, with article and serial titles only in English, thus.]".

I often continue to use "e.g." and "i.e." as appropriate because these abbreviations remain in wide usage, usually without ambiguity even if readers do not know the derivation of these abbreviations. (These are Latin usages; "e.g." abbreviates exemplia gratia, or "for example . . ." that is followed by one or more examples of what has just been noted or described; and "i.e." abbreviates id est, or "that is . . ." which is is followed by an explanation or revised description of what has just been noted. Mnemonic though not quite precise assists for these—in English—can be e.g. "example given", and i.e. "in effect".) I also continue to use "et al." (et alia in the inferred neutral gender, meaning "and others") in conjunction with an author's name, when additional authors' names are not recorded, which is a phrase still regularly in use and is convenient and distinctive. Also used with dates is "ca." for circa, or "about"; another convention still widely used and not ambiguous. However, I have discontinued the use of the long-traditional "N.B." (the Latin abbreviation for nota bene, or "note well") to introduce interjected notes. Such notes now begin with an unambiguous "NOTE:".

In citations of botanical nomenclature, abbreviations of taxonomic authorities are retained when they are used (for example, "L." pertains to Linnaeus and "Rydb." to Rydberg). These are uses by convention within proper botanical work.

When an **acronym** appears within a title, without otherwise spelling out its meaning, it is whenever possible spelled out in a note appended to the citation. This will be added benefit for future users who encounter the acronym long after it passes from use.

In some cases of publishers' credits, the name is presented as an acronym, particularly if it can be sounded out as like a word; for example, UNESCO. For the sake of unambiguous attribution, these names are usually fully spelled out in THE GRAND CANON (in this case, United Nations Educational, Scientific and Cultural Organization). In Mexico, many governmental entities and non-governmental organizations employ a profusion of soundable acronyms; for example, CONAGUA (Comisión Nacional del Agua) and SEMARNAT (Secretaría de Medio Ambiente y Recursos Naturales).

#### COVERAGE AND FORMAT

ABBREVIATIONS OF PERIODICAL AND SERIAL TITLES: Virtually all abbreviations have been eliminated. The problems attending abbreviated citations in bibliography are well-known; I have discussed some in a different venue<sup>63</sup>, but I revalidate those points here. Basically, for centuries the abbreviated citation was a convenience of typesetting economy, often to save space on the printed page; for example, see H. Berg (1907, ITEM NO. 11.3518) who made reference to "Österr. Z. f. B. u. H.", which is *Österreichisch Zeitschrift für Berg- und Hüttenwesen* (Austrian Journal of Mining and Metallurgy), or one might be hard pressed to figure that "HRU Muh Der" stands for "Harran Üniversitesi Mühendislik Dergisi" (Harran University Journal of Engineering, from Şanlıurfa, Turkey). Abbreviations also saved labor at times when type was hand-set and redistributed to its boxes after the job was printed. In electronic media such economy is superfluous.

The abbreviated citation became a needless *caché* of scholastic prowess, too, at a time when it was understood that most readers would know how to decipher it. But today readers cannot know of, much less be conversant in, the mnemonics of abbreviated citations in fields about which they are less experienced or which they are just entering, nor can all readers (or librarians) be expected to easily understand the abbreviations especially from foreign languages. Although some guides to abbreviated citations had been published during the "heyday" of abbreviated citations, they were not all-encompassing nor did they take into account incidentally contrived abbreviations; and few workers had convenient access to these guides anyway. All titles are spelled out in this bibliography.

**AUTHORS**: In THE GRAND CANON, the author credit is the determining index. The arrangement of citations by authors in THE GRAND CANON is not precisely alphabetical by full author-name strings in by-lines; an arbitrary decision. The format followed (shown below) is: single-authors first, dual-authors second, and third, all multiple (more than two) author citations in strictly alphabetical order regardless of the number of authors. This scheme is followed for the reason that sometimes a reader must reverse-identify the authorship of an item without knowing all of the names. The reader may have in hand a citation only for "Author Name *et al.*", which usually indicates three or more authors for the cited publication; thus the complete list of authors is not in hand. The citationist's own full list of references cited may not be available, or the editorial style of a journal may systematically omit all multiple-authors' names from citations (for example, in the mainstream journal *Science*, only the lead author's name is cited, with "*et al.*" appended, and which also inconveniently omits the titles of papers that are cited from serials. With such a citation style it saves on publishing

<sup>&</sup>lt;sup>63</sup> Earle E. Spamer, Edward Daeschler, and L. Gay Vostreys-Shapiro, "A Study of Fossil Vertebrate Types in the Academy of Natural Sciences of Philadelphia: Taxonomic, Systematic, and Historical Perspectives." Academy of Natural Sciences of Philadelphia, Special Publication 16 (1995); see "Bibliographical Criteria", pp. 313-318.

#### COVERAGE AND FORMAT

space but it makes it more difficult for the reader to gauge the information conveyed by these omitted data.

Authorship listed as "Anonymous" indicates that the item is not signed. When in the rare circumstance that an item is actually signed "Anonymous", that fact is indicated in a note to the citation. All "Anonymous" items within each part of the bibliography are listed first, preceding "A". Within the listings for "Anonymous" citations are in chronological order, with those of uncertain precise date within a year listed after those that have more precise dates.

```
MAY BE CITED IN TEXTS AS
Single authors are listed first:
1. Smith, A. B.
                                                                                Smith
Dual authors are listed second:
2. Smith, A. B., and Anderson, J. L.
                                                                                Smith and Anderson
3. Smith, A. B., and Zimmerman, J. M.
                                                                                Smith and Zimmerman
All multiple-author citations then follow in alphabetical order:
4. Smith, A. B.; Anderson, J. L.; Jones, C. D.; Smythe, M. N.; and Betson, A.
                                                                                Smith et al.
5. Smith, A. B.; Jones, C. D.; Smythe, M. N.; and Anderson, J. L.
                                                                                     ,,
6. Smith, A. B.; Jones, C. D.; Zimmerman, J. M.; and Betson, A.
7. Smith, A. B.; Smythe, M. N.; Zimmerman, J. M., and Jones, C. D.
8. Smith, A. B.; Zimmerman, J. M.; and Jones, C. D.
In a strictly alphabetical sequence—not used in this bibliography—the citations shown above
would be ordered as follows (retaining the enumeration shown above):
1. Smith, A. B. [1 author]
2. Smith, A. B., and Anderson, J. L. [2 authors]
4. Smith, A. B.; Anderson, J. L.; Jones, C. D.; Smythe, M. N.; and Betson, A. [5 authors]
5. Smith, A. B.; Jones, C. D.; Smythe, M. N.; and Anderson, J. L. [4 authors]
6. Smith, A. B.; Jones, C. D.; Zimmerman, J. M.; and Betson, A. [4 authors]
7. Smith, A. B.; Smythe, M. N.; Zimmerman, J. M., and Jones, C. D. [4 authors]
3. Smith, A. B., and Zimmerman, J. M. [2 authors]
8. Smith, A. B.; Zimmerman, J. M.; and Jones, C. D. [3 authors]
```

Note that were one to have in hand a second-hand citation for "Smith *et al.* 1947", not knowing the names of the other authors, in a strictly alphabetical list one would have to search the entirety of the alphabetically ordered Smith citations for a 1947 citation rather than just the alphabetically ordered multiple-authored items that would follow "Smith and Zimmerman". In a very long list of a proflific primary author's publications, a strictly alphabetical organization would be unnecessarily tedious; for example see the ichthyological publications of Richard A. Valdez in Part 19.

Many, if not now most, lists of references cited in a publication follow the style by which only the first author is listed by surname first, with the coauthors listed in conventional style; for example, "Anderson, L. B., A. G. Smith, and O. P. Lerned". The reason

#### COVERAGE AND FORMAT

that this bibliography lists all authors surname first is to facilitate easier location of authors when seaching in the digital environment (particularly if this work is ever used to re-create the database version of the bibliography). Otherwise, the method of citation is not as important. For the same reason, the authors of edited volumes (when embeded within a citation) are likewise listed surname first.

Citations throughout this bibliography are also grouped between horizontal rules, separating the names of primary authors. For example:

Author,	, А.		Single author (A. Author)	
	1900	Citation.		
	1905	Citation.		
Author,	В.		Single author (B. Author)	
	1960	Citation.		
Author,	B., AND	Author, P.	Two authors (B. Author and P. Author)

The separating horizontal rules on the page assist to segregate very similar names. To see an example, go to "García" in Part 11, Section 2 (in Volume 1/Part B).

I do not employ the classical card-file, phonetic but arbitrary, alphabetization of "Mac–" and "Mc–" that once was in general practice. This scheme listed the names as if all were spelled "Mac–" and placed them preceding all of the "M's". (See below.) Where appropriate, cross-references are included in this bibliography to redirect users to the pertinent place.

The scheme that I follow is hardly an eternal system. I provide this explanation in order to clarify the method, fully cognizant of the indelible process of change. I know not when in the future someone may refer to this work.

Alphabetization in some cases in THE GRAND CANON does follow traditional bibliographical (or "library" or "filing") schemes. For example, surnames beginning with "St." are alphabetically positioned as if they were spelled in full, "Saint". In the cases of "Van" versus "van", and "Von" versus "von", the capitalized form is alphabetized as "Van" or "Von", while the lower-case form is made a suffix. For example, C. E. Van Gundy is "Van Gundy, C. E.", and "Ernst von Seydlitz" is "Seydlitz, Ernst von"; similarly for others. (In texts, "von" is often, though inconsistently, included in the surname, such that both "von Seydlitz" and "Seydlitz" may be accepted, though the proper formulation in alphabetized listings such as catalogs uses the form noticed above.) Further, "vom" is always lower-case, as in "Gerhard vom Rath" ("Rath, Gerhard vom"), or similarly "ten" in "Herman F. C. ten Kate, Jr." ("Kate, Herman F. C. ten, Jr."). When a surname begins with a lower-case letter for a prefix that is not separate from the full name, it is alphabetized on the lower-case intial letter; for example, "deSaussure". In some instances in this bibliography, inconsistent usages in the literature for the same individual are noted, as with "Le Conte" and "LeConte", or "La Rue" and "LaRue", and when possible the author's own preferred or otherwise documented usage is followed. (See more, farther below.)

An author may publish under formal and informal names; an example is the ecologist Lawrence E. Stevens, who also has published as Larry Stevens. An author who publishes

#### COVERAGE AND FORMAT

under both names is generally listed in THE GRAND CANON by their formal name, with the informal name also given in square brackets. Exceptions are made when when an author has published only or most often under their informal name; in such cases their formal name, if known, is given in square brackets to provided that information.

When I began compiling this bibliography in 1974, I had begun with the mistaken impression that the conventional citation style was to use only the initials for authors' given names. I had gotten this impression from the house styles of some of the technical journals I was then reading. I continued this process for some time before realizing that it was not only unnecessary, but defeated bibliographical precision and contributed to confusion. One notable case as an illustration is where "Sykes, G. G." could indicate either Godfrey Glenton Sykes or his son, Glenton Godfrey Sykes, both of whom wrote about similar topics and both of whom are cited in THE GRAND CANON. Eventually, I retrocited most authors' names in the bibliography, but there may be occasional instances where I am not aware that an author cited with initials had a more fully spelled name printed in the publication.

Care must be taken by the user in knowing, or making assumptions for, an author's name that may be spelled in slightly different ways. The alphabetization schemes of citation, when precise, may be unforgiving. Once, a user of the bibliography was dismayed to find that I had not cited any of the important works by the early Colorado River hydrologist E. C. La Rue; but the user had not found the citations because the search was for "LaRue" (with no space). Even though a general literature search beyond this bibliography may find both "LaRue" and "La Rue" in citations, as well as published by-lines similarly spelled, I have adopted the author's own preferred usage, "La Rue", with the space; and similarly "LeConte" versus the author's own "Le Conte" (which incidentally is correctly shown in most contemporary literature as "Le Conte" but erroneously transformed in later literature to "LeConte" and "Leconte").

I have thus used *spellings* as they appear according to authors' usages, and from title-pages, rather than usages standardized by catalogers. This is because I trust that the author's own usage is authoritative and intentional, which conveys biographical information as well as bibliographical. In the rare occasions where an author's name is in fact misspelled on a title-page or in a by-line, I have cited it correctly, with a notation of the incorrect spelling appended to the citation.

In instances where an item was written by one person, and illustrated by another, I list both names (or as many as which occur) in the author field so as to attribute the creative work of all contributors. If, however, an illustrator's name is typographically separate and diminutive, or noticeably separated from the principal by-line (that is, not of "equal billing"), only the principal author is cited in the author field; then the illustrator(s) will be added parenthetically within the citation. Again, the author's or publisher's intent is followed in

#### COVERAGE AND FORMAT

order to convey bibliographical information, rather than applying an arbitrary rule of conformity that hides that information.

The names of Spanish authors who use their paternal and maternal surnames both are alphabetized by that formal order. Hyphens, which are sometimes used to keep together the surnames (as is seen most often in non-Spanish publications or citations), are omitted as a matter of format in THE GRAND CANON; it is clear in the citation that both names are together, preceding the comma that separates them from the author's given names. When these authors have occasionally omitted the use of one surname, or perhaps using just an initial for one of them, the alternate format is displayed in square brackets.

In instances where an author's name might be pronounced differently than the character suggests—for example, Şafak, pronounced *Shafak*—the name is alphabetized as if it appears without the diacritical mark. This is a matter of convenience for the vast majority of users of this bibliography who may not be aware of such distinctions.

An occasional, special circumstance arises whereby authors' names are arranged according to cultural specifics. Usually, Chinese and some other Asian names (such as Vietnamese) are written with surnames first, followed by given names; in the bibliography, a comma is interjected as appropriate to separate the surname from the given name to follow bibliographical convention only. For example, "Li Hongzhi" is bibliographically listed as "Li, Hongzhi". Since Li is the surname, "Hongzhi, Li", is an error. Occasionally, editorial discretion in a serial or book will have listed a name properly (Li Hongzhi), though no special notice will be made of this, and it will be up to the reader (or bibliographer) to ascertain how it is presented. Spanish names, when maternal and paternal familial surnames are used, remain together, usually without hyphens, and are alphabetized thus. In Portuguese names, however, by bibliographical and alphabetical conventions the maternal and paternal familial surnames are not kept together. In the case of Icelandic names, proper bibliographical convention calls for the full name without a comma, such that the name reflects the familial relationships indicated by cultural usage. For example, the citation for the two-author item by "Ragnheiður Ólafsdóttir, AND Halldóra Hreggviðsdóttir" displays these names in correct combinations. On the other hand, speakers, or bibliographers, of the closely related Faroese language principally of the Faroe Islands no longer follow that convention. In Indonesian, authors may be attributed either by western style given and surnames, but also in traditional single names. In the Burmese language (Myanmar), there are no surnames; and names, originally monosyllabic, began to be bisyllabic in the 20th century, sometimes with an added honorific. In the case of Dutch names, those containing the digraph "ij", sometimes made equivalent to "y", are alphabetized following wider usage as if spelled as the separate letters, "ij"; and following more recent convention the separate letters are used here. In eastern Europe, variations in the order of given and surnames may be noted in bylines,

#### COVERAGE AND FORMAT

sometimes with the surname first or *vice versa*; sometimes additional research might have to be made in order to determine which form is followed in the publication. Helpfully, some publications place the author's surname in capital letters.

**DATES**: Only stated publication dates are used in THE GRAND CANON; that is, only years that are indicated on the title-page, or elsewhere in or on the publication in such a way that unambiguously records that date. For example, a communication dated 1862, compiled into a collection of communications for the year 1862 but not published until 1870, carries the date 1870.

If a date is not so indicated, "NO DATE" is inserted in the date field of this bibliography. If a date is subsequently ascertained, or if one is interpreted or approximated, the information is included in a comment appended to the citation; "NO DATE" remains in the date field and a note of the determined or estimated date is included in the citation in dark red (for example, "[1960]" or "[2004?]"). (The use of color is only for visual attention and convenience.) In this bibliography items with "NO DATE" are listed prior to dated items; and among multiple items of "NO DATE" they are listed chronologically among those that have attributed dates.

A publication that has been released first online, prior to a publication in print, is usually indicated by URL (Uniform Resource Locator) or doi: (digital object identifier) number. The date is given for the online publication. However, when the print document is found later, the proper pagination and date for it replace the online date and information.

"Winter" in terms of publication date can be given for publications that were released either in the latest part of a calendar year, *or* in the earliest part of a year. This can lead to ambiguous chronological listings if the timing is not known. When the timing is not known, the listing defaults to the early part of the year.

"Western" years are used in dates. When a document adheres to a culturally different calendar, the date is converted to a Western date (if it is not also provided), and the culturally established date is included in a comment (as in a 2009 Persian example that was dated 27-28 Mehr 1388 [see Sybney *et al.*, 2009; ITEM NO. 11.2038]; or a 2012 Chinese example that was dated 101 in the Minguo calendar of the Republic of China (Taiwan) [see Huang and Yin, 2012; ITEM NO. 13.3918]).

**TITLES**: In every instance, the title of an article or book is authoritative. They are cited in THE GRAND CANON exactly as they appear in the published works, including misspellings and punctuation; for the most part this pertains also to the inclusion or absence of diacritical marks. For individual volumes that have main and subtitles not separated by the use of punctuation, the conventional librarian's style of inserting a "floating" colon is used (for

#### COVERAGE AND FORMAT

example, *Main title: subtitle*). If a colon is used in the document, it is retained (thus *Main title: subtitle*).

Capitalization in article or book titles is not fully capitalized even where the typeset title has every main word capitalized. This citational style employing mostly lower-case letters, almost universally used, makes for a more easily read citation. (Some historical or purely bibliographical venues will preserve all capitalization, a style not used in THE GRAND CANON.) The only concession to this rule is the retention of capitalized nouns in German, and the use of capital letters when quoting the titles of specific sections within a work. Full initial capitalization is retained for subsections, and for use in quoting a section of a publication whose heading is quoted. In the separate *Cartobibliography*, by convention the older maps are cited with precise capitalizations throughout.

Capitalization of words in serial titles is done according to English or American styles for proper names, not usually in the styles of the original languages that sometimes employ lowercase initials for various principal words (for example, in French, the adjective *belge* that in English is Belgian). Although the style adopted in THE GRAND CANON goes against some styles recommended by manuals of style, I usually use the initial-capital style because it is familiar to most users who will visit this bibliography, not all of whom are steeped in the specifics of technical bibliography. Occasional citations that display the conventional French capitalizations will be found, but no particular significance should be seen in them; only that they may have been cited at different times when such consideration of reformatting was not adhered to.

In foreign-language titles, diacritical marks are usually displayed as printed. Sometimes the marks are omitted, as shown, or in some house printing styles diacritical marks are omitted from capital letters. In other cases they have been placed correctly, thus contributing to some inconsistency in this bibliography. (Regarding diacritical marks in THE GRAND CANON more generally, see the section on diacritical marks.) British spellings are not Americanized (for example, "Palaeontology" is not made "Paleontology"). On the other hand, traditional spellings of "archaeology" even in American English are retained, but where more recent publications use the newer form, "archeology", it too is retained; similarly the geological term, "aeolian" and "eolian".

Italics convey the information under which the publication is most likely to be found in a library. Full, complex titles are cited unless special circumstances call for the use of an ellipsis (. . .), usually to omit lengthy lists of extraneous information on the title-page, such as the author's academic credentials or affiliations. (THE GRAND CANON does not strive to perfectly reproduce the bibliographical content of title-pages, but rather it conveys the citational data contained on title-pages, usually verbatim.) In some instances where the citations were received through another authority who used an ellipsis, and I have been

#### COVERAGE AND FORMAT

unable to examine the original work myself, I retain the ellipsis without remark. Where an ellipsis is actually a part of the title, I so indicate with an annotation to that effect, appended to the citation. Typographical errors are denoted by the interjection or suffix "[sic]".

Where I have had to contrive a title, such as when an item is not headed by one, I devised a descriptive title enclosed within [square brackets].

In some cases a title may be ambiguous, uninformative, or seemingly not pertinent to the Grand Canyon–lower Colorado River region. In these instances I appended to the citation a square-bracketed comment that briefly explains the pertinent content.

I distinguish between periodicals (regularly issued publications) and serials (irregularly issued publications usually as separate volumes in a series of one name). Generally speaking (take note also of the italicization scheme in these examples), a periodical will be cited as like:

Title of article. Periodical Title, volume(number) (date/time of year): pagination.

while a serial will be cited as like:

Title of work. Serial Title, number, pagination.

In the case of books that have been isued as part of a series, the series title is usually placed within parentheses at the end of the bibliographical citation, thus:

Title of book. Place of Publication: Publisher, pagination. (Series Title.)

For a complete guide to the titles of periodicals and serials cited in this bibliography, see the section, <u>Periodicals and Serials Cited in the Bibliography</u>.

The pagination of books cited in this bibliography generally omits Roman-numeraled prefatory pages for two reasons: 1) these pages were not recorded when this bibliography began more than 50 years ago, and 2) to start recording them at a later time would have offered an awkward dichotomy to the citation style throughout the bibliography. Only in some special circumstances will these pagintions be seen. Of course, separate citations of forewords and other introductory material will include the Roman-numeral pagination when it occurs.

Ornithological style conventions call for the accepted common names of birds to be capitalized; for example, the Southwestern Willow Flycatcher and the Yuma Clapper Rail. Such usage is meant to convey the idea that the bird in question is one with a single, established taxonomic (scientific) name. This convention is not followed in this bibliography, in so far as no other animal or plant species is capitalized by practitioners in those fields, and to accordingly single out birds is awkward. Only in the case of direct quotations (within quotation marks) are bird common names shown in THE GRAND CANON with capital letters.

#### COVERAGE AND FORMAT

**EDITIONS**: Citations of books that have gone through more than one edition attempt to be comprehensive, insofar as only editions that contain material relating to Grand Canyon or the Colorado River are cited. However, not all editions of some publications have been examined; so, for example, if only a 3rd edition is cited, one should not automatically suppose that the 1st and 2nd editions omit coverage of the region of interest. In other instances, various editions have been prepared by different authors. In such cases, when possible a notation is included with the various editions that will point the user to the authors of the earlier or later editions, as appropriate.

# PUBLICATIONS PRINTED ON DEMAND AND RELIANCE ON ARTIFICIAL

**INTELLIGENCE**: Since the latest part of the 20th century a broad effort to print publications on demand, rather than distributed from a warehoused stock, has made the their production more economical. In some cases this is an effort of certain smaller presses to conserve resources while making some of their titles available to the public, titles that would normally have gone completely out of print.

In more recent times, publications on demand are produced in this fashion right from the start, usually by commercial printers who make these services available to everyone. Such products are similar to those of "vanity presses", which publish works paid for by the authors. The "vanity presses" publish in the conventional sense, printing a set number of copies and selling them from stock, sometimes offering advertising services. Now, with "publish on your own" services, anyone, for a fee, can produce a book and sell it online through distribution services; no middlemen, and regretfully usually with no editors, with varied quality. For a while in the late 20th century this was called "desktop publishing", though now the ease of production is offered through the self-publishing services just noted.

Numerous more titles are those that are out of print. It is this material that is very attractive to numerous distributors. Works are reproduced at the cost only of immediate production and replication from digital copies, on an individually ordered basis. These may be either in facsimile or reproduced through optical-character recognition methods, or even through an outright resetting of text; some may include the original illustrations, many omit them (and often without removing references to such illustrations). Some are very well done; others are embarassingly sloppy. The modern print-on-demand market has become widespread even if not widely used by readers; yet another reason that its economy is sensible to its distributors. And as may be expected, a large number of such publications are culled from the Public Domain, whose copyrights have lapsed, simply because they are "ripe for the picking". One good example of the diversity of both conventionally printed and on-demand publications may be found in Harold Bell Wright's

#### COVERAGE AND FORMAT

novel of the irrigation empire of the lower Colorado River, *The Winning of Barbara Worth* (in Part 7 of Volume 1/Part B).

In THE GRAND CANON, titles that are published on demand are cited, but there has been no effort made to purposely find all such available titles; only those that have been found during other routine searches or serendipitously are included here. Print-on-demand items can usually be identified by the presence on the verso of the last leaf a barcode and a notation regarding CPSIA information available online, which pertains to compliance with the federal Consumer Product Safety Improvement Act of 2008 (CPSIA). The webpage of IGC Testing (<a href="https://www.IGCtesting.com">www.IGCtesting.com</a>, accessed June 11, 2021) explains:

Tracking label information includes the city, state and date of manufacture of your particular copy and is required by the CPSC for the purposes of product recall.

It is easy to ascertain the city, state and date of manufacture of your copy if your copy contains the following information on the last page of your book:

If your book contains a code beginning with LV, BV, ED, FF, or FS it was printed in the following city and state:

LV: Lavergne, TN

BV: Breinigsville, PA

ED: Edison, NJ

FF: Fairfield, OH

FS: Fresno, CA

The date can be determined by locating the last 6 digits of that code and are in this format dd/mm/yy. Thus, EDOW031246220113 means this book was printed in Edison, NJ on January 22, 2013.

The examples change as facilities are dropped or added.

In some cases, one-off publications, often even without imprint, have been offered in multiple, deceiving formats: whether with variant covers or even different titles, they contain identical content, even though sometimes the descriptions also indicate different authors(!), often with contrived or improbable names that likely indicate creation through euphemistically characterized Artificial Intelligence. For example, *one publication* was listed variously with different authors—"Hodge Melod", "Vince Dolce", "Matthew Gallery", "Colum Scott", "Sneezy Art Lab", "Monroe Liz", "Osen Studio", "Todd Mores", "Moral Studio", and "Salina Gomez".

Similarly selfish marketing gimmicks have been encountered, too. I might cite for the bibliography only one example, with a notation, rather than cite all of those seen for sale online. Another tell-tale sign that a book was fashioned in a most uninformed manner is the use of wholly unrelated cover art; for example, *A Guide to Grand Canyon National Park* by "Jennifer Louis" (no imprint, 2024) is illustrated with a photo of frosty highmountain scenery. The improbable (or probable!) rise in the number of such productions

#### COVERAGE AND FORMAT

has led to their exclusion from this bibliography. Even so, surely this early-21st century period will provide future scholars with a wide variety of examples for broad social and economic study.

Future editions of the bibliography will probably bypass AI-generated material, but at this time it seems to be prudent to cite some as examples from the early period of such productions. Following are several citations from the bibliography, with my notational remarks, that indicate products made with the assistance, or wholly with the use, of AI:

#### Cole, James B.

2024 12.10455 Rising waters : the untold story of the 1983 Colorado Rive	r flood.
--------------------------------------------------------------------------	----------

pp. [Cover title omits article "the" before "1983".] [Clearly a superficial, Artificial Intelligence-developed product, with some disorganized structure and grammar; even an apparently contrived personal "Acknowledgements" section. Also of particular note are the following muddled terms encountered in the text: while the cover and title-page note "Colorado River", the text instead refers variously to "Colorado Stream" and "Colorado Waterway"; Glen Canyon Dam variously as Glen Gorge Dam and Glen Ravine Dam, with Glen Canyon as Glen Gulch and Glen Gully; the Colorado River Basin is "Colorado Stream Bowl" and Rocky Mountains are "Rough Mountains"; and what presumably is Grand Canyon is branded "Fabulous Gully".]

[No imprint], 294

2024 2.32192

Riding the rapids: the legendary journey of the Emerald Mile. [No imprint], 220 pp. [About the Grand Canyon speed run of the Emerald Mile, as written about by Kevin Fedarko. This is a roughly disjointed text, belying the use of Artificial Intelligence, including an apparently contrived personal "Acknowledgment" section that credits in part "the waterway guides" of "the Great Gorge". The contrived cover illustration shows a person rowing a boat that is not the Emerald Mile, through a small rapid on a canyon river that is not the Grand Canyon. The boater is rowing bow first, though facing upstream such as when rowing an ordinary rowboat; they lack a right arm, while the left arm, if it is shown, hangs straight; and the oars have no oarlocks!]

# **Poussee, Sous** [pseudonym? (French: "under pressure")]

2.321347

Grand Canyon: Facts about nature's masterpiece. [No imprint], 87 pp. (The 100x100 CG Series.) [Back cover notes specifically: "While some volumes [in the series] reference specific people, places, products, or events, it's important to note that these references reflect the outputs of ChatGPT at a particular moment in time, using a specific version of the AI [Artificial Intelligence]. The answers may vary when generated by a different version, at another time, or by another person asking similar questions." An unusual early example of admitting the use of AI to create a publication.] [An on-demand publication.]

# Roger, Allen D.

2024

2024 2.32141

The legendary mile: a journey down the world's most dangerous river: the story of the legendary three river runners in the Grand Canyon. [No imprint], [unpaginated]. [Apparently a product produced by Artificial Intelligence based on Kevin Fedarko's The Emerald Mile. Includes misnomers throughout; for example, "Colorado Waterway" and "Colorado Stream" on the same page, and "Glen Gully Dam" and "Glen Gulch Dam" on the same page; "a profound feeling of misfortune when Glen Ravine was overwhelmed"; and so forth. Furthermore, the cover art depicts a reach of the

#### COVERAGE AND FORMAT

Colorado River apparently in Marble Canyon, with a superimposed cut-emerald gem.] [An on-demand publication.]

#### Walter, Richard E.

2024 2.31992

Colorado River story: traveling through history and landscapes. [No imprint], 276 pp. [An on-demand publication.] [NOTE: A roughly presented publication, with potential indications of having been crafted with the assistance of Artificial Intelligence, with frequently poor grammar. Whereas its individual chapters have titles, the table of contents lists only chapter numbers; further, each chapter is indicated to be on p. 4 [!], with "Title Page" listed oddly last, as p. 1.]

**UNITED STATES GOVERNMENT AGENCIES**: National agencies that employ the term "United States" are cited with the U.S. prefix. "U.S." is also used in titles that are from federal government agencies of the United States of America, whether or not "U.S." or "United States" is part of that agency's name; for example, the Government Printing Office in Washington, D.C. is cited as "U.S. Government Printing Office". In some cases, for standardization "U.S." is used as a contraction in a serial title or agency name where "United States" is actually spelled out; for example, "U.S. National Academy of Sciences". Another variant is the "Supreme Court of the United States", which in THE GRAND CANON is alphabetized under "U.S. Supreme Court". In book and article titles, typographical variants of "U.S." are cited as they appear in the title; for example, "U.S." (or, in some older literature, "U. S."), "US", "U.S.A.", and "USA"; similarly, "United States of America" is spelled out if that appears as such.

Within the scope of THE GRAND CANON the *commmonly encountered* bureaus within U.S. governmental departments are attributed by the *bureau names* alone rather than as a section of the department. This is done solely for the sake of the convenience of users of this bibliography, who will readily identify with these units, knowing the departments under which the units are administered. For example, the U.S. Department of the Interior's Bureau of Reclamation is listed just as U.S. Bureau of Reclamation. *See additional examples in the box on the next page.* Some less commonly encountered agencies (for example, "U.S. Department of Energy, Western Area Power Administration"), and agencies with outdated administrative affiliations (for example, "U.S. Department of Commerce and Labor, Bureau of the Census"), are for administrative clarity cited with their departmental affiliations at the time of publication.

#### COVERAGE AND FORMAT

# EXAMPLES OF UNITED STATES GOVERNMENT AGENCIES COMMONLY CITED IN FORESHORTENED FORM IN THIS BIBLIOGRAPHY

Administrative Entity	<u>Cited Herein As</u>
U.S. Department of Agriculture	
Forest Service	U.S. Forest Service
U.S. Department of Commerce	
National Oceanographic and Atmospheric	U.S. National Oceanic and Atmospheric
Administration	Administration
National Weather Service	U.S. National Weather Service
Weather Bureau[The Weather Bureau has also been under the I Administration]	U.S. Weather Bureau Department of Commerce's Environmental Science Services
U.S. Department of the Interior	
Bureau of Indian Affairs	U.S. Bureau of Indian Affairs
Bureau of Land Management	U.S. Bureau of Land Management
Bureau of Mines	U.S. Bureau of Mines
Bureau of Reclamation	U.S. Bureau of Reclamation
Fish and Wildlife Service	U.S. Fish and Wildlife Service
Geological Survey	U.S. Geological Survey
National Park Service	U.S. National Park Service
U.S. Department of Transportation	
Federal Aviation Administration	U.S. Federal Aviation Administration
Federal Highway Administration	U.S. Federal Highway Administration

U.S. Environmental Protection Agency and U.S. National Aeronautics and Space Administration are independent agencies within the Executive Branch of the federal government; likewise also the one-time U.S. Federal Security Agency.

Military branches of the government are listed specifically by their names unless there is a bibliographical reason to cite them under a governmental department (e.g., U.S. Air Force, U.S. Army, U.S. Coast Guard, U.S. Marine Corps, U.S. Navy).

PLACES OF PUBLICATION: American city names in the place of publication are usually listed with the state in which they occur (for example, "St. George, Utah") even if the state information does not appear on the title-page or with publisher's information. This is done to facilitate more ease of use among those who may be less well informed about American geographic locations. Exceptions are major world cities (for example, New York, London, and Paris) and certain major American cities cited in this bibliography, such as Chicago [Illinois]), Denver [Colorado], Las Vegas [Nevada], Los Angeles [California], Philadelphia [Pennsylvania], Phoenix [Arizona], Salt Lake City [Utah], San Francisco [California], and Tucson [Arizona]; these all are cited without the state names. "Washington, D.C." is used for the District of Columbia, "City of Washington", or

#### COVERAGE AND FORMAT

"Washington" by itself, although for bibliographical reasons older usages, such as "Washington City", may be cited in their original form.

No abbreviations for state or province names are used, except in direct quotations. Readers from elsewhere than the U.S. or Canada should not be expected to understand, or to try to find out the meanings of, the two-letter postal-code abbreviations commonly used for U.S. states and Canadian provinces (for example, "ME" for Maine, "MN" for Minnesota, "NJ" for New Jersey, "OH" for Ohio, "PA" for Pennsylvania, or "QC" for Québec) nor their older forms of contraction (these same examples were "Me.", "Minn.", "N.J.", "O.", "Pa." or "Penna.", and "Que.").

Places of publication outside of the United States, with the exception of most major world cities, are listed as given in the imprint itself, even where names were published in another language; thus the same city may appear in variously spelled forms.

**DIACRITICAL MARKS**: In THE GRAND CANON diacritical marks are usually reproduced faithfully; accordingly they are omitted when *not* so printed even when the language properly uses them. This inconsistency is a consequence of typography, usually expressed when all-capital letters are used, such as in a title. While such uses are often replicated in this bibliography, it is regretfully not consistent. The differences reflect varied methods of citation that have been used over five decades of compiling THE GRAND CANON. Diacritical marks are reproduced in authors' names, too, when so used. Characters with diacritical marks are alphabetized as if they do not have these marks; for example, 0, 0, 0, 0, 0 all are alphabetized as like "0".

Diacritical marks (or their absence) are usually shown as they are printed in the original citation. The same principle applies for digraphs, like æ and œ [Latin] or ij [Dutch], which sometimes have been retyped as double-letter ae, oe and ij, respectively. I have sometimes preserved the use of digraphs in citations, but in the case of ij I have followed modern Dutch conformity to present this as the double-letter ij. However, given the fact that I am now beginning the fifth decade of compiling this bibliography, consistency in the use of digraphs may not be perfect; inconsistencies might lie within older citations that do not reproduce digraphs. Still, I have preferred to preserve original uses as much as possible because I believe that eventually the technological means will be available to conduct searches that will always return in one search the diacritical equivalents to plain-letter characters, without the need for combining devices in the digital text. In the meantime, users might consider using a shorter or modified search string; or, if diacritical characters are known in their proper places, by using wildcards in the search string.

## COVERAGE AND FORMAT

**FOREIGN, INDIGENOUS AND AUXILIARY LANGUAGES**: The bibliography includes citations for works written in 114 languages other than English (accounting for 10.2 percent of the bibliography); among them are several Indigenous American languages and the auxiliary ("artificial" or "planned") languages Esperanto and Ido. Pertinent notations are appended to citations to identify all non-English languages; they are displayed in dark red text to aid users who are reading this in its original PDF or in a color printout. <sup>64</sup>

While some languages are represented by a large number of citations, such as French, German, and Spanish, others are represented by few citations, sometimes by just one. This does not mean that *only* one or few items in some way about the Grand Canyon or Colorado River have been published in those languages; it means only that few such publications have thus far been found for THE GRAND CANON. Further discoveries will be either serendipitous or as the result of a concerted program of bibliographical research. The citations in this bibliography should of course not be construed to be "everything"—only everything that I and contributors have thus far found. Similarly, there are likely to be some languages not yet represented in THE GRAND CANON that have pertinent publications about or mentioning the Grand Canyon or the Colorado River. (A complete list of foreign, Indigenous and auxiliary languages cited in the bibliography follows farther below.)

Foreign-language citations in THE GRAND CANON usually are cited as they appear in the originals. Languages that use non-Roman orthography (there are 32 of them in THE GRAND CANON) are cited in transliteration or parenthetical English translation, or both; and when possible, information in the original orthographies are in the citations. In most cases when non-Roman orthographies are supplied in a citation, the characters were derived from digital sources online; for example, PDF documents posted online, WorldCat citations, or publisher's information. In this bibliography these orthographies are Arabic, Amharic, Armenian, Belarusian, Bengali, Bulgarian, Chinese, Georgian, Greek, Hebrew, Hindi, Japanese, Kannada, Kazakh, Khmer, Kyrgyz, Gujarati, Korean, Macedonian, Malayalam, Marathi, Mongolian, Persian, Russian, Serbian, 66

The dark red font is used for visual convenience only, for those working with the original digital version of this bibliography, so that the information is more noticeable. Text in the dark red font may be somewhat distinguishable even when a black-and-white printout is referred to. Colors have no special significance to the data presented in this bibliography.

<sup>&</sup>lt;sup>65</sup> For a remarkable summary of the very rich and involved nuances of orthographic representations of languages, one needs only to browse—and be enthusiastically lost in—*The World's Writing Systems* (Peter D. Daniels and William Bright, eds., Oxford University Press, New York and Oxford, 1996).

Serbian may employ either Cyrillic or Roman orthographies; both have been encountered in compiling this bibliography. Similarly, Bosnian may employ either orthographic system, although only the Roman form has thus far been encountered for this bibliography.

#### COVERAGE AND FORMAT

Sinhala, Tajik, Tartar, Telugu, Thai, Ukrainian, and Yiddish. (Burmese, or Myanmar, another language using non-Roman orthography, is also cited in this bibliography, but the citation has not been seen in its original Burmese orthography and relies only on a transliteration, as documented by a library catalog entry. Citations in Mongolian are all from the 20th century era after which the Cyrillic orthography was introduced by the Soviets.)

A complete list of foreign, Indigenous and auxiliary languages cited in the bibliography are in the two tables on the following pages.

Information in Arabic, Hebrew, Persian, and Yiddish appear properly in the right-to-left format. (Variances that may have appeared in earlier editions of THE GRAND CANON have been corrected.) This introduces some awkward reading orders within a citation, where left-to-right order is followed until a right-to-left insertion is met. Then, the reader must go to the right-hand end of the string and read to the left, then jump to the right to read the continuation of left-to-right information.

An example is shown by the following citation from the bibliography that includes Arabic orthography (*see in the continuation of this text after the two tables below*; and see under "Translating and Transliterating" below for notes regarding the use of colors in a citation). The description here is for the benefit of readers who are unfamiliar with the mechanics of reading right-to-left orthographies, especially as such may appear in mixed directional writing.

#### COVERAGE AND FORMAT

## [عماد عثمان مصطفی محمد] Mohamed, Emad Osman Mustafa

المناط السياحية غري التقليدية ودورها يف تنمية االستاهار السياحي باملناطق اجلبلية [aialimanat alsiyahiat ghariy altaqlidiat wadawruha yf tanmiat aalstithmar alsiyahii bamlnatq ajlbaly] [Unconventional tourism patterns and their role in developing tourism investment in mountainous areas]. In: منظمة المدن العربية, المعهد العربي إلنماء المدن . [munazamat almudun alearabia, almaehad alearabiu 'ilinma' almudun] [Arab Towns Organization, Arab Urban Development Institute], مئتقى : العمران السياحي يف الملناطق اجلبلية. [multaqaa : aleumran alsiyahiu yf amlnatq ajlbali. mihwar albahth : aalsitithmar alsiyahi] [Forum : Urbanism in mountainous areas. Research focus : Tourism investment]. [No imprint] [?] [جامعة اللزهر] [Al-Azhar University, Cairo], 17 pp. [See pp. 6-7, ثرائد ج ممشى" (Grand Canyon Skywalk)"; and see pp. 13, 15.] [Grand Canyon Skywalk, Hualapai Indian Reservation.] [In Arabic, with section title in mixed Arabic and Roman orthography, thus.]

The Arabic in lines 6-7 of the citation block does read correctly from right to left— ملتقى : العمران السياحي يف املناطق اجلبلية. محور البحث : االستثمار السياحي

—even though it awkwardly straddles two lines in the midst of left-to-right text. That is, these two lines read as follows (directional arrows are added here)

```
ے ملتقی : العمران السیاحي یف املناطق اجلبلیة. . . , Organization, Arab Urban Development Institute] → ملتقی : العمران السیاحی ⇔ الستثمار السیاحی . . . . [multaqaa : aleumran alsiyahiu yf amlnatq ajlbali . . .
```

Thus the user reads left to right: "Organization, Arab Urban Development Institute," then right to left ماتقى: العمران السياحي في الملاطق اجلبلية. and on the second line continues to read right to left محور البحث: االستثمار السياحي , then reads left to right the complete transliteration (multaquaa . . . ajlbali). This is due to the word-processed formatting used to produce this bibliography, which correctly displays the Arabic order in the midst of correctly-displayed Roman order, though line breaks are determined by the margin settings. Awkward as it is, readers of Arabic will recognize this. Similarly, in this bibliography reading other non-Roman orthographies that read right to left follows the same principle.

**Translating and Transliterating.** I had considered including approximate, if not precise, **TRANSLATIONS** in *all* of the non-English citations in this bibliography, to assist users who do not know these languages. However, I do not provide universal translations for the reason that many of them would not be at all satisfactory, peculiar if not erroneous, due to linguistic nuances and contextual variances that might not be recognized except by readers fluent in those languages, particularly with older dialects and spellings of centuries past. I could have included translations for some, and not others, but in the end I feel that such an arbitrary selection would detract from the overall dependability meant to be conveyed by THE GRAND CANON. Nonetheless, in a bibliography that is principally in English, information that is presented in a NON-ROMAN ORTHOGRAPHY is decidedly "foreign" to users who are not familiar with those orthographies, and further, that transliterations alone are

<sup>&</sup>lt;sup>67</sup> See a comparative explanation of an example in Hebrew in the *Chicago Manual of Style* (17th ed., University of Chicago Press, 2017), §11.96.)

#### COVERAGE AND FORMAT

not likely to be as helpful as they seem to be. So, for citations in non-Roman orthographies I do usually provide both a transliteration and a translation in English. This is, of course, to facilitate reading by users who could not otherwise even mouth the words, but with the original orthography in hand it will help if one digitally copies to use in searches, or presents the information to someone who can help find the item.

Sometimes, publications whose titles are in non-Roman orthographies are also accompanied bilingually by titles in Roman orthography, often as a translation into English. These are cited accordingly, using all of the *published* information. I cite these items as printed in the original items. However, since I do not read the non-Roman orthographies, and inasmuch as they are effectively unintelligable to many users like me who are familiar only with Roman orthographies, I provide transliterations for them even if they are accompanied in the original by a translation. The non-Roman information has been extracted digitally, usually from the publications themselves, sometimes from web sources, particularly WorldCat and specific library catalogs that have recorded the non-Roman information. Occasionally I resorted to digitally scanning a publication or title-page, or I have printed a page from a digitized copy, then used optical-character recognition (OCR) technology to render the texts in digital format that were copied into the bibliography.

Most translations in THE GRAND CANON have been obtained through the use of Google Translate online. Admittedly, Google Translate is imperfect, insofar that it is a so-called "neural machine translation service" that translates a sentence at a time, which over time has "learned" to construct better and more grammatically correct sentence structure and word selections. In some cases, I have taken texts and reconstructed some sentences, phrases or words (sometimes back and forth between English and the non-English language as checks) to provide more sensible information, then tested the reformatted translation again as a whole. I have not often been disappointed in the result, though in a few instances I discarded a translation that was obviously amiss in favor of one that is simply adequate.

I make this note here so that users of this bibliography can take into consideration any perceived negative aspects, beyond those currently recognized, of Google's programming interface during the timeframe when the interpretations were made, during the late 2010s and after. Still, the translations obtained for this bibliography are reasonably good, if not accurate, often because many items are technical in nature and not subject to more erudite or "literary" nuances. And of course, the use of the original non-Roman orthographies do make the cited items accessible to those who can read them, or who seek the help of librarians and others who can read them.

This note also applies to the corresponding **TRANSLITERATIONS** that appear in this bibliography. In many bibliographies, titles and other information in non-Roman orthographies are usually cited in transliteration only, often because the non-Roman character set

#### COVERAGE AND FORMAT

is not available to the printer (or the author of the bibliography), or offering such information is deemed to be of little use to readers. While transliteration is somewhat helpful, in that the information can be "sounded out", variant transliteration schemes for some languages render a citation less precise, less intelligible, to users who may follow other schemes. For the non-Roman orthographies I have had to rely on Google Translate's transliterations exactly. Again, note of this is given in the event of future recognition of issues with Google Translate's methodologies in the late 2010s and later, the period during which I have used it. Particular schemes of transliteration are not indicated in this bibliography because the sources referred to rarely provide such information, even when I have obtained the information from a library's catalog.

The transliterations that appear in this bibliography do reflect various schemes, depending on when the citation was created, and by whom. For example, Arabic has no uniform scheme of transliteration. Google Translate provided transliterations for this language, but that scheme has been variously revised and, at times, was removed from the service. Thus, the Arabic transliterations cited may reflect these versions, depending upon when the citation was created. In any case, the use of the Arabic orthography itself should allow readers of that language to follow the information needed to re-cite or locate the items in question.

In Google Translate's transliterations, specifically, there is no immediate way by which to ascertain, for a particular language, the specific form of transliteration that was adopted (for example, the IKE standard or the Library of Congress scheme). Nonetheless, by accepting Google's form (among those transliterations quoted from that source) the form is acknowledged as a source and can accordingly be queried or emended to meet future alterations or respond to objections in methodology. Similarly, there is no indication as to which dialects of a language, that might be represented in a publication cited in THE GRAND CANON, are relied upon for a given transliteration and translation.

Traditional and simplified character forms of Chinese both appear throughout THE GRAND CANON. For transliterations, the pinyin system of romanization was usually followed for Chinese text, again based on the sources. These will be recognized by the inclusion of diacritical marks in the pinyin texts. However, some older citations may be represented in other transliteration systems as used by the sources seen. Further, Chinese monosyllabic and polysyllabic transliterations are as taken from online catalogues or from automated translations, without regard to linguistic precision in the language itself. These may be displayed either as a "solid" or compound transliteration, which forms a series of long, single "words", or conversely as a string of single-syllable sounds; again, as used by the sources consulted. Similarly, Japanese and Korean mono- and polysyllabic transliterations

#### COVERAGE AND FORMAT

appear in various forms in this bibliography. These are only guides, and no attempt has been made at standardization.

Compounding the difficulty of automated transliterations and translations that rely upon unstated systems of romanization is the fact that Japanese and Korean sometimes rely upon Chinese orthography, even in the midst of an otherwise Japanese or Korean text. 68 Occasionally, an automated translation is not able to accomodate these; when such occur in THE GRAND CANON a workaround was provided or an adequate transliteration and translation are contrived from the available evidence. Bear in mind these caveats when relying upon translations and transliterations.

Serbian may employ either Cyrillic or Roman orthographies; both appear in this bibliography. Similarly, Bosnian may employ either orthographic system, although in this bibliography only the Roman form has thus far been encountered.

In the Grand canon, citations that have long, compacted passages of non-Roman orthography, transliteration, and English translation are difficult to visually tease apart. I havore clearly. The original title, being the key bibliographical component, is printed in black as usual; it may be followed by a transliteration [in gray font between brackets], then an English translation [in light red font between brackets]. (See the example below.) In any case, I believe that if a person cannot read a foreign language—and does not have the opportunity to obtain a translation—further access to that item may be moot, particularly in the case of maps when a user's specific interest goes beyond just the graphical presentations.

Even if a transliteration or translation is flawed, it does not eliminate the cited work from existence. Hopefully, enough information is provided in THE GRAND CANON to allow users to locate the item or cite it again.

See for example the "Comparative Table of Sinitic Characters", pp. 252-258 in Peter T. Daniels and William Bright (eds.), The World's Writing Systems (Oxford University press, New York and Oxford, 1996).

<sup>&</sup>lt;sup>69</sup> The gray and light red fonts are used for visual convenience only, for those working with the original digital version of this bibliography, so that the transliteration and the translation in English are more noticeable amidst the original data and notational texts. (If a title is provided also in English in the published document, it does not appear in light red font, nor between brackets, and a note appended to the citation brings attention to the fact that the title appears in both languages.) Text in supplemental colors may yet be distinguishable even when a black-and-white printout from this bibliography is referred to. Colors have no special significance to the data presented in this bibliography.

#### COVERAGE AND FORMAT

Comparison of a citation in Russian—first uniformly in all-black text, followed by colorized text *as used* in THE GRAND CANON. In the colorized format a reader may more easily jump between comparable parts of a citation, whether in

original orthography, [transliteration], or [translation to English]

#### Alimbaev, Azmata [Алимбаева, Азамата]

2016 2.28989

Путешествие от океана до океана: национальные парки дикого запада [Puteshestviye ot okeana do okeana: natsional'nyye parki dikogo zapada] [Ocean to ocean travel: Wild West national parks]. Салаватский Нефтехимик (Корпоративная газета ОАО «Газпром нефтехим Салават») [Salavatskiy Neftekhimik (Korporativnaya gazeta ОАО «Gazprom neftekhim Salavat»)] [Salavat Petrochemist (Corporate newspaper of OJSC "Gazprom Neftekhim Salavat")] (Салават, Республика Башкортостан [Salavat, Republic of Bashkortostan, Russia]), 2016(32)(5211) (August 20): 6. [Part of a series. This part includes "Гранд-Каньон" [Grand Canyon] and "Подкова на счастье" [Podkova na schast'ye] [Good-luck horseshoe, which pertains to Horseshoe Bend, Glen Canyon, Arizona].] [ОАО: Открытое акционерное общество (Otkrytoye aktsionernoye obshchestvo) (Public Corporation).] [In Russian.]

#### Alimbaev, Azmata [Алимбаева, Азамата]

The user is at an advantage if he or she is attuned to the orthographical appearances of different languages. One might suppose that it is superfluous to indicate in a citation that it is—for example, "[In Spanish]"—but I have heeded the remarks made by users of this bibliography who defend those who may not be expected to determine any foreign language, even a "more usual" Western language like French, German, Italian, or Spanish.

## COVERAGE AND FORMAT

Specifying the language of a publication is further useful, too, for languages that are orthographically similar (at least to many who may be confused by general appearances; for example, Danish/Norwegian/Swedish, or Bosnian/Czech/Slovenian, or Bulgarian/Kyrgyz/Macedonian/Mongolian/Russian/Tajik/Ukrainian).

In THE GRAND CANON, non-Roman scripts have been included in many pertinent citations, but these have been opportunistic inclusions only. (The references here to "Roman" refer to the characters otherwise referred to as "Latin", although various items [mostly older maps cited in the *Cartobibliography*] are noted as being written in the Latin language, a reminder that Latin once had been the tongue of international scholarly communication. And even today, the descriptions of new taxa of plants may by convention be published in unembellished botanical Latin.)

There are many examples in this bibliography of citations that supply some information in one of 31 non-Roman orthographies, which are accompanied by transliterations and translations, in Arabic, Amharic, Armenian, Belarusian, Bengali, Bulgarian, Chinese, Georgian, Gujarati, Greek, Hebrew, Hindi, Japanese, Kannada, Khmer, Korean, Kyrgyz, Macedonian, Malayalam, Marathi, Mongolian, Persian, Russian, Serbian, Sinhala, Tajik, Tartar, Telugu, Thai, Ukrainian, and Yiddish. There are also Roman-character sets that also contain characters not used in most alphabetic sets (for example, in Azerbaijani, Faroese, and Icelandic). Other written languages are wholly contrived alphabetic sets based on Latin letters with diacritical marks, sometimes mixed with other symbolic characters (for example, Navajo, Southern Paiute, and Vietnamese).

Occasionally, an English-language title may also be printed in a source that is otherwise in a foreign language; in this bibliography both are cited as they are published. Occasionally I have had to clarify a translated title (such as in Korean). In some cases where a non-Roman title has not been captured for the citation, only a translation within square brackets serves in the citation.

In addition to all the non-English, Indigenous and auxiliary languages, items produced with various forms of symbolic notation are also included in this bibliography. For example, Part 5 of the bibliography includes items produced with physically raised characters, such as Braille and Moon Type. Other examples include an item that is written in Graham shorthand <sup>70</sup>; an item that is in Eurospelling <sup>71</sup>, which is one attempt to provide consistent spellings for pronunciations; and another publication in English that is in phonemic

Anonymous, "Grand Canon". *The Student's Journal* (New York), Vol. 33, no. 8 (August 1904), p. 8 [text also transcribed into Graham shorthand]. (ITEM NO. 2.13783)

F. du Feu, "The Holiday." Spelling Progress Bulletin (North Hollywood, California), Vol. 17, no. 2 (Summer 1977), p. 8. (ITEM NO. 8.608)

#### COVERAGE AND FORMAT

characters  $^{72}$  as part of a study of the phonetics of informal speech. There is also an item in which a brief passage is in Morse code.  $^{73}$  An audio-visual DVD also was prepared with a narrator using American Sign Language, and a serial is cited whose title is also printed in ASL.  $^{74}$ 

# BRIEF CONTENT ENTIRELY QUOTED, AND REFERENCES "in passing" AND

"passim": In some cases in THE GRAND CANON, when a pertinent reference to Grand Canyon or the Colorado River is exceedingly brief within a larger work, I have chosen to quote the passage in full as a square-bracketed note. These remarks are usually indicated with the comment, "(ENTIRE ITEM)" or "(ENTIRE NOTE)". Generally, "entire item" is used to denote that the entire text is quoted and is not an extract, and that there is nothing more to the cited item; "entire note" is used to indicate that the quotation is part of a longer item, about which the remainder may not relate to this bibliography. This is done to place the citation in context. It is also a courtesy to the user, who thus may be spared the time (and perhaps expense) of acquiring or gaining access to a copy of the work, only to find there the single, brief remark and nothing more of pertinence. Furthermore, the items often have generalized titles or no title at all, which does not identify the content in the useful context intended by this bibliography. The limit, though, is subjective; occasional short passages in print may not be quoted in their entirety and thus not marked by a comment. Some citations compiled during the early years of work on this bibliography will not have any brief-content notes.

If mention of the Grand Canyon or Colorado River is especially brief and occurs but once, it is so indicated usually with the notation, "in passing", italicized to draw attention to it. For example, a writer's passing remembrance of the "vast quiet" of the Grand Canyon, is significant enough to include the reference in THE GRAND CANON (particularly if the comment was made long before modern concerns of preserving the "natural quiet" of the canyon). But if a writer takes note only as a point of reference or comparison—for example, "it reminded me of the colors of the Grand Canyon" or "it is like the Grand Canyon"—the item does *not* warrant a citation in this bibliography. The comment must surely, even if only briefly, embrace some informational context about the canyon or river regions.

#### COVERAGE AND FORMAT

The phrase *passim* is used only where it is meant "here and there"; it indicates that there are several or numerous, usually scattered, references to something within the cited work. (The term *passim* is often misused to mean "in passing", implying one instance.) For a few scattered references in a large work, I usually indicate more clearly the situation either by the citation of pertinent page numbers or by special remark, though *passim* is used (correctly) when there are frequent brief references in a work that otherwise is not chiefly about the referred subject.

Occasional notes of the presence of a person or a group of people at the Grand Canyon are included among the citations. These are accompanied by a note as to the name of the person or group, as a means by which to document their presence at Grand Canyon at the time indicated. Most often these references pertain to a part of an itinerary rather than the Grand Canyon as ultimate destination. Usually, if a person was renowned there may be a few additional comments, perhaps even a photograph or two, in the cited item; for example, the visits to Grand Canyon by Albert and Elisabeth, the King and the Queen consort of the Belgians, and by Mme. Marie Curie the twice Nobel laureate (in chemistry and physics).

TAXONOMIC NOMENCLATURE IN BIOLOGY AND PALEONTOLOGY: Part 11/Section 1 and Part 19 of the bibliography contain a great deal of taxonomic nomenclature of living organisms; the so-called binomial and trinomial nomenclature of genera and species (Genus species; Genus species subspecies; Genus species var. variety, in italics) and capitalized proper names of higher taxonomic groups (like phyla, classes, and families, not italicized). Part 11/Section 2 and Part 21 likewise contain the taxonomic names for fossil organisms. Although a citation will be exactly as printed, in notes that may follow it I have taken the opportunity to clarify some of the nomenclatural conventions that may not be intuitive to those who do not practice in these fields. I have indicated as best as I have been able the newly introduced taxa in a publication that come from localities within the geographic embrace of this bibliography. To disambiguate variant uses I use spelled-out phrases to bring attention to these new taxa. For example, "new species" is used instead of the nomenclaturally more conventional "n. sp.", "nov. sp.", "sp. n." or "sp. nov." and similar constructs (which in any case mean the same thing); likewise for "new genus", "new subgenus", "new subspecies", "new ichnospecies", "new variety", "new combination", "new status", "new name", or any similar usage with a taxonomic name. In this fashion, too, one may find in this digital bibliography all such cited occurrences simply by searching for the spelled-out "new species" (etc.).

Terminology in botany and zoology follows the respective international codes of nomenclature for these biotic groups. However, THE GRAND CANON is not a work of systematics nor of nomenclatural revision. All references to neological taxa and acts of

#### COVERAGE AND FORMAT

taxonomic revision are those of the works cited. Abbreviations of authority names in botany follow standard botanical protocol, and citations reflect authors' particular usages.

Ornithological style conventions call for the accepted common names of birds to be capitalized; for example, the Southwestern Willow Flycatcher and the Yuma Clapper Rail. Such usage is meant to convey the idea that the bird in question is one with a single, established taxonomic (scientific) name. This convention is not followed in this bibliography, in so far as no other animal or plant species is usually capitalized by practitioners in those fields, and to accordingly single out birds is awkward, at least in this bibliography. Only in the case of direct quotations (within quotation marks) are bird common names shown with capital letters in THE GRAND CANON.

**NOTES**: Citations may have notes appended to them within square brackets. These can be special bibliographical comments or my comments about the cited work that I deem to be important, explanatory, or in some way disambiguating. For example, as a matter of policy I make every attempt to spell out acronyms that appear in a citation but are not otherwise explained in the citation; the fully spelled phrase will appear within square brackets at the end of the citation, which may be useful for future times when the acronyms are no longer commonplace (in their field) or known to readers.

A special group of notes are those that are "see" notes, which refer the reader to specific pages within the publication that I have identified as pertinent to either the Grand Canyon or the lower Colorado River regions. By default, one may assume that if no special indication is made that the pages referred to pertain to the Grand Canyon, as opposed to the Colorado River corridor below Grand Canyon; although in some instances *both* regions may be embraced by the "see" note, which will usually be so indicated. Given that the earliest known *published* references to the Grand Canyon appear in the 1850s, "see" notes that precede this time will by default refer to the lower Colorado River region.

Occasionally, I have interjected a search-friendly rephrasing of a title so as to make an "expected" phrase locatable in a digital search. For example, Charles Francis Saunder's *Finding the Worth While in the Southwest* will be missed if one does not know the precise spelling of the title, searching instead for "Finding the Worthwhile in the Southwest". In the citation I have added the interpretive assist within square brackets.<sup>75</sup> Similarly, old-fashioned or misspelled words in titles will when necessary be properly spelled within a note so that the user may locate the item when properly spelling it in a search but not knowing of the error.

<sup>&</sup>lt;sup>75</sup> See C. F. Saunders, Finding the worth while in the Southwest, Robert M. McBride and Co. (New York, 1918). (ITEM NO. 2.5652.)

#### COVERAGE AND FORMAT

Appended to pertinent citations are cross-listings to citations in Part 30 (Book Reviews and Similar Notices) and pertinent notices in other parts of the bibliography, particularly Part 3 (*The New York Times*). Reviews and notices relate to primary resources cited in this bibliography *and* that take note of the Grand Canyon or Colorado River. They appear in the following format: " $\equiv$  reviews and notices Author, date, ITEM NO. 00.000". These ancillary paragraphs are prefixed by the equivalence symbol ( $\equiv$ ) and displayed in dark blue to unobtrusively denote them and to visually segregate them from the citation should the product be displayed in a monochromatic fashion or printed without color.

**UNDETERMINED INFORMATION**: In the matter of a disclaimer, this bibliography is always a work in progress. In a few places, informational parts of a citation include an underscore, \_\_\_\_\_\_, thus, which indicates missing information. Nevertheless, enough critical information is present, and deemed useful enough, to warrant including the incomplete citation in THE GRAND CANON. I was not able to see the complete information either because the document was not available or it was an imperfect copy; and should the information be obtained, the citation will be emended. It is useful in this fashion so as to alert users of potentially useful items that through their own means they may be successful in locating.

Pagination that has not been determined is noticeable by its absence. This may have been the result of mistakenly overlooking this information, or more likely is the result of having seen an imperfect or incomplete copy of the publication. When such omissions appear in the citation of serial items, the format appears as in this example: "102(4) (April):." (the colon and period in juxtaposition). As "untidy" as this is, requiring a bit more effort to locate the item inside of that issue, it would be unconscionable to omit what otherwise is a useful citation.

New tracks in North America: A journal of travel and adventure whilst engaged in a survey for a southern railroad to the Pacific Ocean during 1867-8 [ABSTRACT]. Mittheilungen aus Justus Perthes' Geographischer Anstalt über Wichtige Neue Erforschungen auf dem Gesammtgebeite der Geographie von Dr. A. Petermann [Petermanns Geographische Mitteilungen], 16: 349-350. [In German.]

Each citation in the bibliography has a unique, but arbitrary, serial number referred to herein as an ITEM NUMBER—in the example above the number is 2.26799. It is composed of the number of the part of the bibliography in which it is cited (Part "2." in the example), suffixed with a unique number within that part ("26799" in the example). These are explained more fully in THE GRAND CANON Volume 1/Part A.

An ITEM NUMBER is assigned when a citation is added to the bibliography, or when a citation is transferred from one part to another, thus the numbers do not follow in order within the alphabetical order of the bibliography's citations. They are not reused if a citation is removed from a part, either by deletion or transfer to another part (and there renumbered). ITEM NUMBERS did not appear in the 1981 and 1990/1993 print editions of the bibliography.

Many citations throughout the bibliography have appended to them **CROSS-LISTINGS** to previous editions of this bibliography and to selected bibliographical references. Also cross-listed are citations for **REVIEWS AND NOTICES** of the works cited. These ancillary notes are indented and prefixed by the equivalence symbol (≡) so as to readily distinguish them from the citations themselves. For users who view this bibliography in its driginal PDF format, the bibliographical cross-listings are in dark orange and the reviews cross-listings are in dark blue (see example above); the colors are only for visual convenience when colors are displayed.

CROSS-LISTINGS to reviews and notices cite book reviews and similar publication notices for publications cited throughout the bibliography. This is indicated by the accompanying ITEM NUMBERS in the cross-listing—most are in Part 30 (Reviews and SIMILAR NOTICES); some others in Part 3 (THE NEW YORK TIMES) and a few elsewhere.

Citations for works that are not in English note the language in red print, usually at the end of the citation.

<sup>\*</sup> Cross-listings to WHEAT pertain more fully to, and are explained in, THE GRAND CANON Volume 2 (Cartobibliography), where details and chorographical notes for the map will be found.

COVERAGE AND FORMAT

# **ITEM NUMBERS**

Every citation is assigned an "Item Number"; for example, 2.4598 is citation no. 4598 in Part 2 of the bibliography (GENERAL PUBLICATIONS). These are only serial numbers contrived to uniquely identify each citation. They do not appear in order in the lists within each part. These numbers are created when a citation is added to the bibliography. If a citation is removed, the Item number is not reused. When an Item number is referred to in comments in this bibliography, it appears in this format: "ITEM NO. 0.0000".

Item numbers were created for the Internet Edition of 2000; earlier, print editions of the bibliography did not enumerate individual citations. Citations within each part of the bibliography are enumerated beginning with the suffix ".1"; for example, ITEM NOS. 1.1, 2.1, 19.1, etc., were the first-enumerated items in Parts 1, 2, and 19, respectively. When a citation is for some reason moved to a different part of the bibliography, it is assigned a new Item number and the old Item number is not reused. Similarly, Item numbers are not reused when citations are deleted from the bibliography. The highest Item number within a part thus does *not* represent the total number of citations within that part. (See the table on <u>page 4</u> to see the current count of citations within each part of this 5th Edition of THE GRAND CANON.)

Item numbers are not in sequential order in any part of the bibliography. They were sequential when the Internet Edition was created in 1999, but all additions since then have been made as inserts; likewise for various citations that have been transferred to other parts of the bibliography or to Volume 2, the *Cartobibliography* (and thus renumbered). So the numerical order of Item numbers within each part is now random. Further, the Item numbers have been assigned in numeral order, but they do not represent a chronology because some numbers represent a renumbering of an item that has been moved from another part of the bibliography, while others have been delted from the bibliography. Regardless, an Item number uniquely identifies a citation.

# CROSS-LISTINGS TO PRINT EDITIONS OF THE GRAND CANYON-LOWER COLORADO RIVER BIBLIOGRAPHY

THE GRAND CANON includes cross-listings to its earlier print first and second editions: *Grand Canyon Natural History Association Monograph 2* (1981), and *Grand Canyon Natural History Association Monograph 8* (1990) with its *Supplement 1* (1993).

The user who has need to follow cross-listings will notice that corrections to citations have been made (some of them significant), that later emendations have expanded many citations, and that many citations have been reassigned to other topical parts of the

#### COVERAGE AND FORMAT

bibliography. These cross-listings are simply a historical tracking within this bibliography, although users who may be investigating the editorial growth of bibliographies in general may find an advantage in these cross-listings.

The online-database version of the bibliography, which had been online 2000–2021, first incorporated the unique <a href="ITEM NUMBERS">ITEM NUMBERS</a> for every citation. Since these numbers were not present in the print editions, the cross-listings described here are an additional assist in locating the same citations between these editions and THE GRAND CANON, particularly if the citation has been emended in some way since appearing in the print monographs.

The cross-listings to *Monograph 2* and *Monograph 8* are incorporated into THE GRAND CANON as a means to indicate citations that had appeared in the first and second print editions, before the bibliography went online in 2000. The different parts of the bibliography have, however, been completely rearranged and expanded from the outline of the printed volumes (see the whole of Appendix to Part 1). This does not mean that the citations themselves are precisely as they appeared in the print editions; many citations have been edited or corrected since first being published. Some citations even have been corrected to attribute different authorship, and other significant edits.

An unfortunate bit of confusion was met in earlier editions when some librarians mistakenly inferred, in the haste of busy duties, that a citation accompanied by a cross-listing was actually itself a "Monograph" number 2 or 8 (although it seems a bit incongruous that, in the case of a magazine article, as this was, it would also be a "monograph"). The older crosslisting format had noted only (for example), "Mon. 8: 1-66" (meaning it was cited in Part 1, page 66 of *Monograph 8*, as explained in the front matter to the publication). In this example the cited work was misinterpreted as being also pages 1-66 in an otherwise unstated "Monograph 8". So for the Grand Canon I revised the style of cross-listings. In the Grand CANON now, cross-listings to *Monograph 2* are straightforward. They cite listings by page number; for example, CITED» GCNHA Monograph 2: page 42. This 1981 edition of the bibliography contained a single range of page numbers. Cross-listings for page numbers from Monograph 8 reflect the individually numbered (and individually paginated) parts of that monograph; thus for example, a citation on page 53 of Part 1 of *Monograph 8* is cross-listed as CITED» GCNHA Monograph 8: page 1-53. Note that the physical pagination on those printed pages embeds the part number, thus "page 1-53". The pagination for each part *individually* in "Supplement 1" of 1993 continues without interruption from the 1990 edition. See the Appendix to Part 1 in Volume 1/Part B for the collated pagination sequence and loose-leaf tab placements of the consolidated Monograph 8 (the 1990 edition and Supplement 1).

When this bibliography's Internet Edition (the database) was prepared in 1999, cross-listings to the print bibliography were added; but those 9,519 instances of cross-

#### COVERAGE AND FORMAT

references were to *Monograph 8* only. Cross-listings to *Monograph 2* were never included in this bibliography until the creation of THE GRAND CANON (3,918 instances were counted). These figures for cross-listings to both monographs are only an approximation of the number of citations that appeared in the 1981 and 1991/1993 editions. These numbers, compared to the 111,000 citations in THE GRAND CANON, reveal the huge and rapid growth of the bibliography after 2000, largely due to resources being made available through the internet.

#### CROSS-LISTINGS TO REFERENCE LISTS

In the field of bibliography there are many reference lists to which scholars and booksellers, as well as bibliographers, refer. The most common of these relate to the bibliography of American history, or some part of it; others are more specific to the Grand Canyon and Colorado River. These reference lists usually have the advantage of uniquely enumerating each of the citations, and it is by these numbers that the titles are referred in published literature and correspondence.

THE GRAND CANON cross-lists its citations to several annotated bibliographies; these are:

- Francis P. Farquhar (1953), *The Books of the Colorado River and the Grand Canyon: A Selective Bibliography*
- David M. Goodman (1969), *Arizona Odyssey : Bibliographic Adventures in Nineteenth-Century Magazines*
- Wright Howes (1962), revised, enlarged edition of *U.S.iana* (1650–1950): a Selective Bibliography in Which Are Described 11,620 Uncommon and Significant Books Relating to the Continental Portion of the United States
- Glen McLaughlin, with Nancy H. Mayo (1995), *The Mapping of California as an Island : an Illustrated Checklist.* California Map Society, Occasional Paper 5
- Rodney W. Shirley (1993), 3rd, revised edition of *The mapping of the world : Early Printed World Maps, 1472-1700*
- Colton Storm (1968), A Catalogue of the Everett D. Graff Collection of Western Americana
- Henry R. Wagner and Charles L. Camp (1982) (revised and enlarged by Robert H. Becker), 4th edition of *The Plains and the Rockies : a Critical Bibliography of Exploration, Adventure and Travel in the American West, 1800–1865*
- Carl Irving Wheat (1954-1963), *Mapping the Transmississippi West, 1540–1861....* San Francisco: The Institute of Historical Cartography, 5 volumes in 6.

These titles were selected for their renowned authority and wide use, for the special precise and ancillary bibliographical data they convey, and for their annotations.

#### COVERAGE AND FORMAT

This bibliography also includes cross-listings to some booksellers' catalogues, *viz*, Five Quail Books (for 1987–2013), and Guidon Books (1969). The one by Guidon Books is an important early list of publications relating to this region. That the catalogues also list prices provides some added utility as documents of econometric bibliography.

All cross-listings are appended to citations starting with the notation, " $\equiv$  CROSS-LISTINGS". These paragraphs are prefixed by the equivalence symbol ( $\equiv$ ) and displayed in dark orange to unobtrusively denote them and to visually segregate them from the citation should the product be displayed in a monochromatic fashion or printed without color. (Color otherwise has no significance to this bibliography.)

These titles were selected for the special bibliographical data they convey, or, in the case of Howes, which is only marginally annotated, because it is a standard list of publications to which scholars, booksellers, and other bibliographical readers and users conveniently refer. Each of these other bibliographies is numerically organized; it is by these numbers that users unambiguously refer to publications in question.

The omission of other notable bibliographies—for example, Yates and Marshall's *The Lower Colorado River: A Bibliography* (1974) and Powell's *An Arizona Gathering II,* 1950–1969: *An Annotated Bibliography* (1973)—is intentional because they are not annotated or have insufficient annotations to make cross-listings to them meaningful as sources of more bibliographical information. This is admittedly a means of expediting a bibliographer's work, too. The information included in these other publications is nonetheless valuable because they relate to materials or regions not covered by THE GRAND CANON.

# **Bibliographies and Special Catalogues Cross-listed in**

# THE GRAND CANON

In the bibliography, cross-listed items are appended to the end of individual citations using the shortened forms listed in the left column below. This is followed by the numbered listing in the indicated publication. *For example*:

FARQUAR 17	No. 17 in Francis P. Farquhar's <i>The Books of the Colorado River and the Grand Canyon: A Selective Bibliography</i>
FORD 190a	No. 190a in Mike S. Ford's <i>The Books of the Grand Canyon, the Colorado River, the Green River and the Colorado Plateau: A Selective Bibliography</i>
FQ4:176	No. 176 in Five Quail Books Catalogue Four
FO24/1:290A	No. 290A in Five Quail Books Catalogue 24, Volume 1

As essential Grand Canyon–Colorado River bibliographies, the notices for Farquhar and for Ford are denoted in **bold** to bring attention to them amidst more numerous cross-listings; conveniently, they come first in alphabetical order.

#### COVERAGE AND FORMAT

## **FARQUHAR**

Farquhar, Francis P. 1953. *The books of the Colorado River and the Grand Canyon: a selective bibliography*. Los Angeles: Glen Dawson, 75 pp.

To the aficionado of Grand Canyon and Colorado River books, "Farquhar" is a household name. Although his was not the first bibliography of the subject, it was the first to provide some critical evaluation usable by bibliophiles and historians. Book collectors and dealers alike use the enumerated entries as a shorthand for unambiguously communicating to their audiences just which title to which they refer. Indeed, Farquhar's volume is itself a collectible, one which demands increasingly higher prices. While the book is sought by many, its value as a bibliography is shortened both by its arbitrary, admittedly "selective" content and by the passage of time. It is nevertheless the gem among Grand Canyon-Colorado River bibliographies. A supplement for 1953-2003 was assembled by Mike S. Ford (see below).

#### **FORD**

Ford, Mike S. 2003. *The books of the Grand Canyon, the Colorado River, the Green River and the Colorado Plateau: a selective bibliography.* Flagstaff: Fretwater Press, 177 pp.

As the half-century sequel to Farquhar (*see above*), Mike Ford's volume continues the classic in the same vein. Typographically it is identical to the Farquhar volume. Unlike Farquhar, however, there are some citations that are extralimital to those of THE GRAND CANON and thus are not cross-listed (for example, items exclusively about the Green River).

#### FO

[Catalogues from Five Quail Books and from Five Quail Books—West. *Catalogues 1–9* by Clement David "Dave" Hellyer. *Catalogues 10–32* by Daniel F. Cassidy and Diane Cassidy. Denoted by volume or supplement number as listed below.]

The "Five Quail" series of catalogues are among the most useful overviews on the availability of out-of-print (and some in-print) literature of the Southwest; specifically, the Grand Canyon and the Colorado River. Their purpose as catalogues is both a shortcoming and a strong point with respect to their use as bibliographical resources. They clearly cannot be a comprehensive list of titles because they record only those things that are offered for sale at a given time; but virtually all titles are extensively annotated with the booksellers' comments—without these the catalogues would not be cross-listed in THE GRAND CANON. The information about pricing is also a useful guide for those interested in aspects of econometric bibliography. Also of interest are the notations for offerings that are association copies, or copies inscribed to notable persons of Colorado River and Grand Canyon

#### COVERAGE AND FORMAT

history, or copies in extraordinary bindings or other such states that may significantly increase their collector's value. (In the present bibliography, however, neither pricing, association information, nor exceptional information are repeated.)

Occasional brief, interim catalogues and price lists were also distributed by Five Quail; these are indicated with alphabetical suffixes (*e.g.* FQ5A). Only those that contain annotations are included in the cross-listings here; those that are simple price lists are omitted.

### COVERAGE AND FORMAT

#### **GOODMAN**

Goodman, David M. 1969. *Arizona odyssey : bibliographic adventures in nineteenth-century magazines*. Tempe, Arizona: Arizona Historical Foundation, 360 pp.

The brief annotations included with many of Goodman's citations provide added value to this volume. Although there are errors, the list is still a worthwhile and the most comprehensive such working reference for all who deal with the subject. As with other enumerated bibliographies, the numbered entries may be referred to in catalogues and bibliographical works.

### **GUIDON**

Guidon Books. 1969. *The Colorado River, people and places: a catalogue of books, pamphlets, maps and manuscripts.* (Introduction by C. Gregory Crampton.) Scottsdale, Arizona: Guidon Books, 84 [85] pp.

The very brief annotations to some titles add marginally more usefulness to this catalogue, but it is among the first such dealer's lists—if it is not the first—dedicated to the literature of the Grand Canyon and the Colorado River, coming on the centennial of the Powell Expedition. The list, as well as the pricing information, makes it a useful companion to the Five Quail catalogues that began in 1987.

### **Howes**

Howes, Wright (COMPILER). 1962. *U.S.iana* (1650-1950): a selective bibliography in which are described 11,620 uncommon and significant books relating to the continental portion of the United States. New York: R. R. Bowker Co., for The Newberry Library, revised, enlarged ed., 652 pp.

The title, "U.S.iana", has rightly been looked at with cocked heads since it was first printed in 1954. Wright Howes defended his neological refocusing of "Americana" in his foreword (and he clearly was successful in defending it with his publisher's editors). This is a bibliographical reference work widely used by book dealers; its enumerated citations have become a standard by which dealers and buyers can unambiguously refer to bibliographically well-researched and documented titles. As with other enumerated bibliographies, the numbered entries are often referred to in catalogues and bibliographical works.

### **McLaughlin**

McLaughlin, Glen, *with* Nancy H. Mayo. 1995. The mapping of California as an island: an illustrated checklist. *California Map Society, Occasional Paper 5*, 134 [143] pp.

Cross-listings to McLaughlin appear only in the Volume 2 of The Grand Canon, *Cartobibliography of the Grand Canyon and Lower Colorado River Regions*. The geographical presentation of California variously as a peninsula and an island is well studied. It is not the object of the *Cartobibliography* to

### COVERAGE AND FORMAT

summarize this mightily interesting story, though for one outstanding example of the amount of material that is available visit Stanford University Library's Glen McLaughlin Collection of California as an Island, <a href="https://searchworks.stanford.edu/view/zb871zd0767">https://searchworks.stanford.edu/view/zb871zd0767</a>. That entire collection has been digitized, which includes numerous maps in books, though it largely omits world maps, deferring to the Shirley cartobibliography (see below). See also a complementing catalogue by McLaughlin, to which cross-listings in the *Cartobibliography* are made where pertinent, where we are less concerned as to whether California is peninsular or insular than we are in knowing which rendition is presented in a map. It alerts us to where to look for the Colorado River; that is, how it was accommodated in the North American geography. In the McLaughlin catalog, many, though not all, maps are illustrated, although at resolutions that are not generally useful for examining the geographical region of interest to this cartobibliography.

#### SHIRLEY

Shirley, Rodney W. 1993. *The mapping of the world: early printed world maps, 1472-1700.* London: New Holland (Publishers) Ltd. [3rd, revised ed.], [i-xxiv], IX-XLVI [XLVII], 1-669 pp.

The prolific accounting of early printed maps assembled by Shirley, each enumerated by number, allows for convenient reference to hundreds of maps that otherwise would be inaccessible to most researchers. The accounting also includes the provenance of examined and additional copies for many of the maps. The resolution of the reduced-scale images (as compared to the originals) may not be entirely satisfactory for some purposes, but for general examination of geographical details they will suffice.<sup>76</sup>

### **STORM**

Storm, Colton (COMPILER). 1968. *A catalogue of the Everett D. Graff collection of western Americana*. Chicago: University of Chicago Press, *for* The Newberry Library, 854 pp.

This is as much a "selective" list as is Farquhar's bibliography. It covers only the contents of one collection of books (however exquisitely comprehensive). Its enumerated, extensive bibliographical annotations make this a valuable reference work for those who have not seen the titles cited therein, or who have need to compare the bibliographical information among editions and printings. As with other enumerated bibliographies, the numbered entries are often referred to in catalogues and bibliographical works.

See also Volume 2, *Cartobibliography*, for more information relating to the citation of early maps (or refer to introductory matter in Part 25 of Volume 1/Part B).

### COVERAGE AND FORMAT

### **THOMAS**

Thomas, Marcia L. 2004. *John Wesley Powell : an annotated bibliography.* Westport (Connecticut) and London: Praeger Publishing, 256 pp.

This is the definitive Powell bibliography. It includes all of Powell's works and ancillary productions as expected, but goes further by adding manuscript and archival sources, photograph collections, map collections, audio-visual works, and internet resources and digital archives. (In the present bibliography, of course, only those citations that pertain in some fashion to the Grand Canyon–Colorado River region are cross-listed.)

### WAGNER-CAMP

Wagner, Henry R., and Camp, Charles L. 1982. *The Plains and the Rockies: a critical bibliography of exploration, adventure and travel in the American West, 1800-1865.* Revised and enlarged by Robert H. Becker. San Francisco: John Howell—Books, 4th ed., 745 pp.

This title has long been a definitive check source on the subject. Its generous type size used throughout this volume makes this a handsome work, though one does question its lack of economy given its original \$150.00 price. The precise bibliographical citations make it the closest substitute for having the title-pages in front of the reader, an approach easily remedied today by digital reproduction. As with other enumerated bibliographies, the numbered entries are often referred to in catalogues and bibliographical works.

#### WHEAT

Wheat, Carl Irving. 1954–1963. *Mapping the Transmississippi West, 1540–1861*. San Francisco: The Institute of Historical Cartography, 5 volumes in 6.

This title has long been a definitive check source on the subject. Sometimes it may be awkward to use, given that map numbers do not follow in order within the text (but are ordered in the separate "bibliocartography" in each volume). For a combined index, see Seavey, Charles A. 1992. *Mapping the Transmississippi West, 1540-1861: an index to the cartobibliography.* Winnetka, Illinois: Speculum Orbis Press, *for* Map and Geography Round Table, American Library Association, 210 pp. (Map and Geography Round Table, Occasional Paper no. 3.).

The Wheat cross-listings were added for the first time in THE GRAND CANON for the newly produced *Cartobibliography* (Volume 2 of the series, which extracted citations that were originally in Volume 1). The format lists items by volume/part number, followed by the *map number* as listed in the cartobibliography, following standard convention. (See the *Cartobibliography* for full information.) The separate volumes of Wheat and their cross-listing headers, are as follows:

WHEAT I:\_ 1957. *Mapping the Transmississippi West, 1540-1861. Volume One. The Spanish* entrada *to the Louisiana Purchase, 1540-1804.* San Francisco: Institute of Historical Cartography, xiv, 264 pp.

### COVERAGE AND FORMAT

WHEAT II: 1958. Mapping the Transmississippi West, 1540-1861. Volume Two. From Lewis and Clark to Fremont, 1804-1845. San Francisco: Institute of Historical Cartography, xiii, 281 pp.

WHEAT III:\_\_\_ 1959. Mapping the Transmississippi West, 1540-1861. Volume Three. From the Mexican War to the boundary surveys, 1846-1854. San Francisco: Institute of Historical Cartography, xiii, 349 pp.

WHEAT IV:\_\_\_ 1960. Mapping the Transmississippi West, 1540-1861. Volume Four. From the Pacific railroad surveys to the onset of the Civil War, 1855-1860. San Francisco: Institute of Historical Cartography, xiii, 260 pp.

WHEAT V:\_\_\_ 1963. Mapping the Transmississippi West, 1540-1861. Volume Five. From the Civil War to the Geological Survey. Part One [and] Part Two. San Francisco: Institute of Historical Cartography, two volumes, Part One, pp. i-xviii, 1-222; Part Two, pp. 223-487. [The Bibliocartography for both parts appears in Part Two.] ["Although the limiting dates for the whole work are 1540-1861, as set forth on the title page, I have found it desirable . . . to consider a number of maps published after the stated dates. In fact, this volume contains a rather extended discussion of significant maps published all through the 1860's, and a final chapter touches upon various notable maps of the 1870's—and even a few of still later date, down to 1884—which one way or another round out the work." (Part One, p. xi)]

Given that these volumes are relatively difficult to access outside of specialized libraries, and that they command steep prices in the booksellers' market, they have also been reprinted in facsimile, in reduced size and without benefit of the few fold-out plates. As a matter of convenience, these special and ondemand reprints are listed here:

NO DATE [1995?]. Storrs-Mansfield, Connecticut: Maurizio Martino, and Parsippany, New Jersey: About Books, 5 volumes in 6. ["This reprint is strictly limited to 350 copies" (title-page verso).]

2004. Mansfield Centre, Connecticut: Martino Publishing. [Two states: 6 volumes in 3, 6 volumes in 2.]

### COVERAGE AND FORMAT

## **IDEAS FOR CONTINUING WORK**

A bibliography, particularly in today's work environments of enhanced or "value-added" products, should not be a static "list" of items. Accordingly, THE GRAND CANON can provide a foundation for all kinds of ambitious and utilitarian works that expand upon it. Given the amount of time that I must dedicate to the existing bibliography as well as to other avocations and daily responsibilities, and due also to the limitation of the length of life, few, if any, of these recommendations are likely to be pursued by me.

- 1. The Internet Edition of this bibliography online, while useful, had departed in significant ways from the "master" version of the bibliography represented in THE GRAND CANON; and in fact, by technical necessity it could no longer be updated after June 2015 and was removed in October 2021. There are numerous typographical nuances, particularly the use of 31 non-Roman orthographies, which will present some difficulties in the construction of a new and improved searchable database online. Still, THE GRAND CANON can serve as the master source for producing a wholly new, and modern, searchable bibliographical database. This is in my view the one most important thing to be done; but it will be as useful as THE GRAND CANON only if it does not in any way diminish the kinds of information conveyed by the citations. Again, I repeat my insistence that this bibliography should not be subservient to current limitations of technology; it must not be forced to adapt to methods that will be obsolete or unnecessary in the future.
- 2. One may consider using the citations within THE GRAND CANON to serve as roots for digital links to digitized copies of the works there cited. Whether selections would be made from the citations, or a massively comprehensive digital library were to be assembled, are determined by logistical and financial considerations.
- 3. There is an absolute need for a database of citations organized in such a way that it is an encyclopedic index to all pertinent *subjects* within every publication. Although such organization would be only as powerful as the competency of those who create it, and the number of usefully indexed entries, its overall value would be immense. THE GRAND CANON can serve as a foundation for such a comprehensive work: the groundwork has been laid through the compilation of the sources, some of them with analytical remarks. One has "only" to peruse them and take the work from there.
- **4.** Compilers of anthologies may do well to use THE GRAND CANON as a source by which to identify works that are refreshingly beyond those that are collected (again and again) for a Grand Canyon or Colorado River anthology.

### COVERAGE AND FORMAT

- 5. More closely focused bibliographies (simple or complex) can be created by extracting citations from THE GRAND CANON. For example, for the geographical region covered by THE GRAND CANON one may create a bibliography restricted to the science of entomology. Or, one may use Parts 2, 11 and 12 of this work to create a separate bibliography that focuses only on the lower Colorado River below Grand Canyon, but one more finely subdivided into subject areas in the same fashion as is THE GRAND CANON as a whole.<sup>77</sup>
- 6. An annotated or a critical bibliography would make THE GRAND CANON even more useful. A comparable work, restricted to one subject area, may also use THE GRAND CANON as a foundation.
- A thorough examination of some especially pertinent serials is in order. For example, the entire runs of The Deseret Weekly<sup>78</sup>, Arizona Highways, High Country News, Sunset Magazine, Santa Fe Employes' Magazine/Santa Fe Magazine, and numerous other regional and specialized serials should be examined against this bibliography to list all pertinent items that may relate to the Grand Canyon and lower Colorado River region.<sup>79</sup> While a great many citations from them are present, a systematic review of every issue will surely find more. Likewise the special exception to the exclusion of newspapers in the citation of items from the Deseret News (Salt Lake City) through 1910 would do well to continue the effort to the present, at least for the non-daily component. Specialized serials should likewise be selected and searched consistently; for example, Engineering News-Record, Reclamation Era, Mining and Scientific Press, or various early railroad journals will likely contain far more items pertinent to technical and engineering projects in the lower Colorado River region, specifically mining, dams and irrigation works.<sup>80</sup> Other specialized works, like the annual reports of the Atlantic & Pacific Railroad and the Atchison, Topeka & Santa Fe Railway Company, will have information that has not as yet been looked for to include in this bibliography. In addition, important government serials, most notably the

<sup>&</sup>lt;sup>77</sup> In 2021, Part 25 (General Maps) of THE GRAND CANON was extracted, revised, and enhanced by the inclusion there of all cartographical citations from other parts and appendices of the bibliography. This resulted in what now is Volume 2 of THE GRAND CANON, *Cartobibliography of the Grand Canyon and lower Colorado River regions in the United States and Mexico*, 1535–2021, accessible at <a href="https://ravensperch.org">https://ravensperch.org</a>. See further remarks with Part 25 in Volume 1, Part B.

Many runs of Utah newspapers are now available online at <a href="http://digitalnewspapers.org">http://digitalnewspapers.org</a>.

<sup>79</sup> Desert Magazine, mentioned in this list in previous editions, was examined in its entirety in 2013–2014.

Issues of Reclamation Era have been canvassed for the period 1932–1953 (these were the only years available to me). Note also that this title was suspended June 1933–December 1934 and May 1942–April 1946. The section in most issues, "Notes for Contractors", do include many brief items—sometimes a sentence or two—that are pertinent to this bibliography; however, they were considered far too numerous to cite individually. The section, "Boulder Canyon Project Notes", which appeared during part of the time when Hoover Dam was built, is likewise composed of numerous, brief items; but these are cited as a collective for each issue.

### COVERAGE AND FORMAT

Federal Register and The Congressional Record should be searched in their entireties.<sup>81</sup> At the state level, one example of this sort of serial is the Arizona Administrative Register, published by the Arizona Department of State, Office of the Secretary of State (which has not been examined for this bibliography). I have not found everything because, except for a very few titles, I have not been able to examine very many whole runs, contiguously. Many serials would likely benefit from such a conscientious comparison.

- 8. A complete—or as complete as might be humanly possible—bibliography of *all* newspaper accounts relating to the Grand Canyon would surely be welcome. The Colorado River might be added as well, which would multiply by many times the number of entries. However, even the Grand Canyon alone is likely to be a maddening lifetime's work, which, frankly, may never be done. I myself would not accept either a selective list or one in any way limited. One would have to select the newspapers to cover, inasmuch as there are thousands published nationwide (and elsewhere) that could contribute interesting items. Considering the scarcity of copies of most titles, whether on paper, filmed, or digitized, the utility of such a compendium would be realized only by tedious journeys both online and in person.
- This bibliography's coverage of legislative documents (other than the *Federal Register* 9. just mentioned) is only a fortuitous gathering. There is a huge body of material that can yet be listed from federal and state official records alike, perhaps most richly among the legislative acts and affairs regarding water supply in Arizona and California. Other, more specialized area can be identified; for example, all documents that relate to early government explorations, or Indigenous affairs of all sorts. These items would include legislative bills, hearings, laws, and in fact everything that one may consider a part of legislation—at federal, state, and local levels alike, as well among Native American governing agencies. Judicial documents and contractual records pertaining to activities in this region are scattered widely. Official sources in Mexico, too, must be considered. A comprehensive accounting of all such records will be a Herculean task. (To see an example of the daunting number of sources one has only to examine one publication, now nearly a century behind on the curve, to appreciate the potential bound in these sources. This work is *The Colorado Compact*, by Reuel Leslie Olson, published in 1926, which was his doctoral dissertation in Harvard University that interestingly went into two printings with a sale price of \$8. The profound number of sources that appear in his voluminous footnotes and appendices—even though they are on a single subject and reach only to the early 1920s leaves one staggering to imagine a correspondingly vital summary across a broader range

With regard to the *Federal Register*, searches of the years since the mid-1990s to date have already been done through the online availability of issues from these years. The *Congressional Record* has not thus far been searched.

### COVERAGE AND FORMAT

of topics and a far longer period of time—in fact, plenty of time for politicians, constituents, and interested parties to grow an impenetrable thicket.)

- 10. Standardizing author names may be worthwhile, even though in some instances the fashion in which an author's name appears will differ from the way in which it is displayed in the publications (for example, full names would substitute for published nicknames). Examples of standardization will be found in the Library of Congress's "Authorities" files.<sup>82</sup> Sometimes, an author's given names are spelled with initials, other times spelled out. I have tried at least to standardize those kinds of variations under fully spelled headings; exceptions may be found with some authors who consistently publish their names only with initials and by which they are also generally known (for example, P. T. Reilly, whom few would know as Plez Talmadge Reilly). Occasionally, one will notice that an author's full name is spelled out (usually three names). This is done, of course, when they publish their name as such, but it also appears in a list of productions when the author was encountered for the first time through their academic thesis or dissertation. Then, as they continue to publish and their works are extracted for this bibliography, the completely spelled name is retained as the header even when the author may never have used it in later publications. In the Grand canon overall, I have conscientiously considered that it is the document that arbitrates the citation, less so a derived system of styles; because what I record here is the work of individuals, agencies and institutions as they were presented.
- **11.** The astute reader may gain some sense that the number of citations in THE GRAND CANON lag particularly in the mid-twentieth century; that there must be more, and, of course, there are. I blame in part U.S. copyright law for this, which by its due diligence to protect the intellectual property of others has occluded a very large number of works from being conveniently gathered for this bibliography. Where a bibliography's compiler does not have to do more than see how a work can be cited for the bibliography, a publication has to be seen more fully if it is not obvious from its title or abstract whether it belongs in the bibliography (and in the case of THE GRAND CANON, which part of the bibliography). Thousands of such items under copyright have been digitized and made available on the web, but often they require a user to pay to see them, or be a member of a subscribing institution through which the item may be viewed. Even more are simply under embargo. This makes perfect business sense; yet, if all that is needed by the bibliographer is an indication of whether or not to include a citation, by examining the content, it is discouraging to have to omit a citation because of the cost or inability to look at it without acquiring a copy. Ironically, the exercise of copyright law can preclude a simple examination of a work, leading to the omission of that work in a bibliography. Although this does

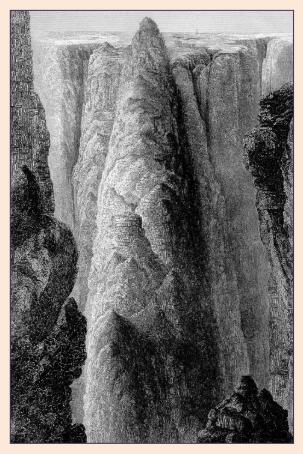

<sup>&</sup>lt;sup>82</sup> There are printed catalogues, too, but the Authorities specifically may be viewed online at <a href="http://authorities.loc.gov">http://authorities.loc.gov</a>.

### COVERAGE AND FORMAT

not happen frequently, it exposes an interesting, but unutilized, benefit to those who own copyrights: By a bibliography's inclusion of citations for works that are under copyright, it serves to alert interested users to the existence of those works, which encourages their acquisition and use under the protections of copyright law.

- 12. There may be tens of thousands of articles and books wholly and partly about the Grand Canyon and lower Colorado River region that have been written in languages other than English. More than 11,400 non-English citations do presently appear in THE GRAND CANON. Intuitively there must be myriad more that have escaped all manner of public indexing, web-posting, and serendipitous discoveries by me and contributors. Finding foreign-language articles in serials and journals, particularly those products that are elusive in libraries and far from the regions in which they were produced and which are written in non-Roman alphabetic schemes; they will be challenging work. Those that appear in THE GRAND CANON must therefore be considered only a sample.
- **13.** THE GRAND CANON would benefit by providing translations of *all* non-English titles and extracted notes, a process far beyond my capabilities. (See also my remarks in the section here on "Translating and Transliterating".)
- 14. Manuscript and archival holdings are unique resources. However, because they exist mostly as single copies in one location (copies of these materials may also exist as a matter of user-copy production policies or microfilming), they are not as conveniently available as are published materials that can be obtained in a number of places or through inter-library loan services. Today, some items may be available through digitized resources online, and many repositories may make copies for researchers, usually for a charge. A separate guide to these resources would be a boon to researchers, though yet another Herculean task.
- 15. For web material there is, generally, only a unique "copy" of an item, accessible to all via a hyperlink until it is moved (and possibly difficult to relocate) or removed altogether (and thus gone). It might be worthwhile sometime to compile a webography for the Grand Canyon and Colorado River based on a reliable and unambiguous restoration and perpetuation of old ("historic"?) and current URLs, but this is far beyond the scope of the present work. Such a webography can identify "extinct" resources, as well as those that are in some format "archived" and those that still are reliably perpetuated (at least at the time when the list is prepared!).

### COVERAGE AND FORMAT

▲ 1861 "Big Cañon."

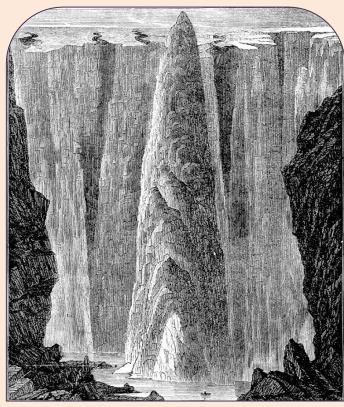

Lithograph by J. J. Young, from a sketch by F. W. von Egloffstein. *In* Joseph C. Ives, *Report Upon the Colorado River of the West, Explored in 1857 and 1858....* (U.S. Government Printing Office, Washington, 1861), Part I (General Report), Plate IX.

## 1873 "Canons of the Colorado River."

[Artist not indicated.] *In* D. M. Warren (revised by A. von Steinwehr), *An Elementary Treatise on Physical Geography, To Which Is Added a Brief Description of the Physical Phenomena of the United States* (Cowperthwait and Co., Philadelphia, 1873), p. 37.

By the time this rendition had been made, the first of John Wesley Powell's exploits on the Colorado River, in 1869, was well known. Thus it was reasonable, if not just for the purposes of staffage, to place a lone boater on this canyon river—though with some uninformed artistic license in showing the boater's reflection on limpid water.

**16.** This bibliography can further serve as the source material for works that contain early illustrations of the Grand Canyon and Colorado River. A comparative study of illustrations redrawn from earlier ones has yet to be produced. The illustration at left is one of F. W. von Egloffstein's problematical scenes from the 1858 Ives expedition, which was imaginatively refigured (below) for use in a geography a decade later. The newer view added the river and a lone boater, in the process changing the view from a side canyon to one in the river gorge. Note also the even more greatly exaggerated incision of tributary canyons (wriggling across the plateau and which look like hanging ravines in their canyon wall outlets) and, in both, Egloffstein's improbable spire rises above the adjacent plateau (and made narrower in the 1873 drawing).

# AUTHOR PSEUDONYMS AND VARIANT NAMES

Pseudonyms and Psychonyms
Names Changed by Marriage, Divorce or Legal Decree

### PSEUDONYMS AND PSYCHONYMS

THE FOLLOWING 167 pseudonymous psychonymous (pseudonyms with insider connotations) author names appear in THE GRAND CANON. In the bibliography, citations of all pseudonymously published works are listed by the names under which they were published, followed by actual name in square brackets when so known. For practicality, the term "pseudonym" is used for all of these names.

Cited Name	Actual Name

X.<sup>10</sup> [not determined]
X (Ms.) [not determined]
Yucca [not determined]<sup>11</sup>
Z., X. Y.<sup>12</sup> [not determined]

- <sup>2</sup> Fictitious name used in an anonymously produced, pirated version of *The Personal Narrative of James O. Pattie, of Kentucky* (see in Part 2 of this bibliography: Pattie, 1831 and following).
- <sup>3</sup> As with the "C. V. Abyssus" psychonym, with which this one appeared, it derives from the scientific name of an animal well known at Grand Canyon; in this case the raven, *Corvus corax*. "Early" is a nickname for Earle Spamer, originated unwittingly by a worker at the Glen Canyon Environmental Studies office during the 1990s and which was perpetuated by Richard Quartaroli. (I am glad to have it, in that "Earl", "Earle" [etc.] has no formal hypocorism or diminutive.)
- <sup>4</sup> The author indicates that his use of the initial "B." is a play on the phonetic "Stephen Be Glad", conveying a personal reflection of life (*fide* Stephen G. Gladdish).
- <sup>5</sup> "Phoenix" is a pseudonym frequently met in literature. Although the authors identified just as "Phoenix" in this bibliography are undetermined identities, there also is the more well-known "John Phoenix" who was Lt. George H. Derby. He is cited in this bibliography under "John Phoenix", but there are more citations as Derby, for his naval survey work on the lower Colorado River. Derby was also a humorist who wrote under the additional pseudonymous names, John P. Squibob and Professor John Phoenixiana, among others. See the biography by G. R. Stewart (1937, ITEM NO. 2.10162).
- <sup>6</sup> Pseudonym? (French: "under pressure"), a ChatGPT-contrived author, apparently.
- <sup>7</sup> Not John Wesley Powell.
- <sup>8</sup> A purposeful misspelling, to repeat an actual misspelling that appeared on the ID token on an award cup.
- <sup>9</sup> As like Quartaroli's use of "C.V." as initials in a pseudonymous name (see *note* 1), this likewise derives from a taxonomic name; in this case, F. Splendens is derived from the plant *Fouquieria splendens*, or ocotillo.
- <sup>10</sup> A common form of anonymity.
- <sup>11</sup> Regarding the identity of "Yucca", Shane Murphy (2020, *John Hance*, ITEM NO. 2.29619), p. 126, suggests that, based on the date of visit and the signers of Hance's guest book (Woods, 1899, ITEM NO. 2.7036, though Murphy

<sup>1 &</sup>quot;C. V. Abyssus" is the origin of the other variants of the "C.V." psychonymous, whimsical uses originated by Quartaroli. It derives from the original scientific name of the Grand Canyon rattlesnake, Crotalus viridis abyssus. (Taxonomists later changed the specific identification; the snake is now referred to as C. oreganus abyssus; see in Part 19 of the bibliography).

### AUTHOR PSEUDONYMS AND VARIANT NAMES

referred to the original book now in the Arizona Historical Society), "Yucca" might be one or both Harriet Colton and Florence Dukes, both of Brooklyn, New York; but Murphy (*fide* correspondence, April 20, 2023) now suggests it may have been anyone in the same party. Other obviously women's names are Mrs. William Carroll, Flagstaff; Emma Spaulding, Prescott; and Alice Metz, Cincinnati.

## NAMES CHANGED BY MARRIAGE, DIVORCE OR LEGAL DECREE

THE 27 PEOPLE listed here are individuals who are cited in THE GRAND CANON by *more than one name* (usually birth and marriage names). All names are as used by the woman in her publications. Cases where a marriage name precedes a birth name indicate a divorce after which the woman reverted to her birth name. The earlier/later time frames pertain to the *dates of publications* cited in this bibliography.

### Earlier Name as per dates of items in this bibliography Later Name as per dates of items in this bibliography

# PERIODICALS AND SERIALS CITED

THIS LIST ITEMIZES 12,064 titles of periodicals and serial publications cited in THE GRAND CANON. If anything, it certifies the extent of international interest and attention to the Grand Canyon and the Colorado River, specifically as recorded through these media. Titles listed are principally those cited in THE GRAND CANON Volume 1/Part B (*Bibliography*) but include a few that appear in Volume 2 (*Cartobibliography*).

That a title appears in the list does not imply that the entire series has been examined; in fact, this is rarely the case. Almost all titles are added to the bibliography opportunistically; many serial titles are limited to single or a few citations. However, some principal serials that relate almost exclusively to the Grand Canyon and the Colorado River have been canvassed in their entirety; for example (but not limited to), Boatman's Quarterly Review, Canyon Views, Colorado Plateau Advocate, The Confluence, Grand Canyon Footprints, Grand Canyon Nature Notes, O'Pioneer/The Ol' Pioneer, Plateau, and The Waiting List. Titles of older inkprint serials that have been examined only from digital copies posted to the web are listed, although their complete runs have not necessarily been seen (for example, the Santa Fe Railway's employees' journal, Santa Fe Magazine, earlier known as Santa Fe Employes' [sic] Magazine). As a rule, serials are cited in this bibliography only if they are issued no more frequently than weekly; there are a few "daily" exceptions, such as the United States' Federal Register and The New York Times.

Titles are listed here in the format used by this bibliography. Awkward titles are as used by the organization or agency that published the serial. For titles that are a house organ that incorporates the name of the institution, organization, or agency within the serial title, the name of the originating entity usually appears first, followed by the series name, much in the way the titles will be found in most library catalogues. For example:

Proceedings of the Academy of Natural Sciences of Philadelphia is cited as  $\ensuremath{\mathsf{I}}$ 

Academy of Natural Sciences of Philadelphia, Proceedings 83

This style has become less customary in some digital catalogs, which now (although not always) list titles faithfully word by word—this despite that titles when so alphabetically ordered do not present a contiguous record of organizational sources, at least within that database field. Compounding that, many libraries do not catalog their serial holdings under multiple variant titles, thus they do not necessarily follow all changes in titles or the names of parties responsible for the serials. As noted in the introductory matter to this volume, all titles are cited in this bibliogrpahy as they

### PERIODICALS AND SERIALS CITED

Capitalization of words in serial titles is done according to English or American styles for proper names, not usually in the styles of the original languages that sometimes employ lowercase initials for various principal words (for example, in French, the adjective *belge* that in English is Belgian).

The list that follows is in strict alphabetical order, with the exception that *leading* definite articles are not alphabetized. Leading definite articles that appear in this bibliography are "The" and non-English equivalents "A" [in Hungarian], "Das", "De", "Den", "Der", "Det", "Die", "El", "Het", "Il", "L'", "La", "Le", "Les", "O", "Su", "T $\alpha$ " or "To" [Greek "Ta" or "To"], "W", and "Y".84

If a serial has a multilingual title, and one of them is also in English, the English title is usually preferred in this list of periodicals and serials, with the other title(s) cross-referenced to it (usually indicated by " = "). If a title is in non-Latin orthography, it is listed according to its *transliteration*, with its English translation (if determined) cross-referenced to it. Cross-listings are not enumerated and thus do not artificially inflate the total serial count.

For titles that change over time, individual citations in THE GRAND CANON reflect titles at the times of publication. Differences in spelling or variant uses of hyphens also reflect contemporary uses of a serial's name, as cited. The master list that follows notes these differences.

Explanatory information, when deemed necessary for clarity—such as a means to further identify the creator of a more obscure serial, to note the place of publication of a little-known serial, or to distinguish among multiple identical serial titles—is given in *(colored parenthetical italics)*. (The use of color is only a convenience for those who use this work in its original format, and italics so that this information will still stand out if a non-color reproduction is used.)

For a fuller explanation, see herein the section on "<u>Citations</u>" in the "COVERAGE AND FORMAT" part of this volume.

appeared on the issues being cited, thus they do track variant names over time. Given the legacy of the profuse variation of styles of citation in the published literature, the citation style noted above is retained. Further, this bibliography was begun in this format five decades ago. Retrofitting its more than 111,000 citations, for any reason, would be a prodigious task of uncertain usefulness, especially given that subtle differences between citations would make it impossible to employ a simple global digital search-and-replace process.

The non-English leading definite articles listed here reflect only those that appear in the periodical and serial titles cited in this bibliography. An exception to the exclusion of the leading definite article in alphabetizing this list is the serial *El Palacio*, which borrows the name of El Palacio Real de Santa Fé, the historical capitol of colonial Spanish government in Santa Fe, New Mexico, U.S.A.

## PERIODICALS AND SERIALS CITED IN

## THE GRAND CANON

Numerals in the left column are counters only for convenience; they are not a permanent registration of these serial titles nor are there any cross-references to them. The numbers continually change as new titles are added to this list; thus this particular number sequence appears only in the present edition of THE GRAND CANON.

# SOURCES OF ACADEMIC THESES AND DISSERTATIONS

ACADEMIC THESES AND DISSERTATIONS are cited in THE GRAND CANON even though technically they are unpublished; they nevertheless are available through academic libraries and many are now widely accessible on websites, and some are cited in more regularly established work, too. These kinds of "non-conventional" productions, as like gray literature, represent a record of ongoing research and are used and cited by researchers and other interested parties. They also are a part of the historical record of activities in, and attention to, the regions covered by this bibliography.

Numerals in the left column are counters (1–476) only for convenience; they are not a permanent registration of these names nor are there any cross-references to them. The numbers continually change as new names are added to this list; thus this particular number sequence appears only in the present edition of THE GRAND CANON.

Names and places of institutions are as cited and for the dates of citations; name changes may occur.

# NAME CHANGES AND NUMERATION NOTES FOR SELECTED PERIODICALS AND SERIALS

PERIODICALS AND SERIALS pass through name changes either through organizational changes or in the activities of editors and committees. A few periodicals cited in THE GRAND CANON have gone through some name and frequency changes, or they have interjected "special issues" in their series, which have posed some problems in tracing the bibliographical lineages of these serials for citations in this bibliography. These problematical titles are itemized here.

The selection is, however, restricted to series that are significant to the subjects of this bibliography rather than to their standing within general perspectives of world bibliography and cataloging. For example, some periodicals not listed here have gone through name changes as a normal process of business, without a change in volume numbering; for example: *National Geographic Magazine became National Geographic; National Parks and Conservation Magazine* became *National Parks*; and *Field Notes* (National Audubon Society) became *American Birds*.

For a listing of more than 12,000 periodical and serial titles that are cited in THE GRAND CANON, refer to the list of <u>Periodicals and Serials Cited</u>.

#### NAME CHANGES AND NUMERATION NOTES

# Active Interest Media Active Interest Media Outdoor Group/National Park Trips National Park Trips Media

Grand Canyon Journal
Grand Canyon National Park Journal
National Park Journal: Grand Canyon
National Park Journal (Grand Canyon Edition)

#### Unnumbered

Frequency: annual Responsibility varies:

Active Interest Media (Boulder, Colorado), 2012–2015, 2019

National Park Trips Media (Boulder, Colorado), 2016–2018

Active Interest Media/National Park Trips (Boulder, Colorado), 2020, 2022

#### Cover and masthead titles vary:

Grand Canyon Journal, 2012-2015 [2015 cover adds "National Park Travel Guide"]

National Park Journal: Grand Canyon [cover title], 2016-2022

Publisher's information below masthead specifies "National Park Journal's Grand Canyon edition". The note-to-merchants line below the Universal Product Code on cover reads for the 2016 ed., "Display Until July 12, 2016"; 2017 ed. notes, "Display Until December 6, 2016" [sic]; 2018 ed. notes, "Display Until January 16, 2018"; 2019 ed. notes, "Display Until January 15, 2019".

Grand Canyon: National Park Journal [or Grand Canyon National Park Journal] [cover title], 2020, 2022
Publisher's information below masthead specifies "National Park Journal's Grand Canyon edition".
The note-to-merchants line below the Universal Product cover reads for the 2020 ed., "Display Until January 14, 2020"

Running footers (2012-2018): "Grand Canyon Journal [year]"; (2019-2022): "Grand Canyon Edition [year]"

Variant: Also there are apparently copies not marked with UPC barcodes and display notices, not for newsstand distribution. (Verified only for 2019 ed.)

#### **Canyon Views**

1(1)-[current]

Spring 1996-[current]

Frequency: quarter, triannual; semiannual

Summer 2011 issue misnumbered as v. 18, no. 2, which should be v. 17, no. 2. The error was not later noted, and the Fall 2011 issue continued the enumeration with v. 18, no. 3. Accordingly, v. 17 has only one number, and v. 18 begins with no. 2.

Fall 2014 issue misnumbered as v. 21, no. 3, which should be v. 21, no. 4.

Beginning with 27(2) Fall/Winter 2020 GCC indicated that this title would henceforth be distributed only in digital format, with printable version available on request. The print version returned with the next issue, 28(1) Spring/Summer 2021.

## Museum of Northern Arizona Grand Canyon Natural History Association Grand Canyon Association and Museum of Northern Arizona

[Grand Canyon Natural History Association: organizational name change in October 1994 to Grand Canyon Association; organizational name change 1 November 2018 to Grand Canyon Conservancy]

These serials follow in chronological order.

The two series of Plateau were not formally denoted, but are so indicated here for bibliographical purposes.

#### Plateau

[first series]: Museum of Northern Arizona

1(1)-65(3) 1939-1994

Frequency: month(?)

Format and frequency change with vol. 49, no. 1 (Summer 1976).

Frequency: quarter and/or semiannual

#### Cañon Journal

Cañon Journal: Magazine of the Grand Canyon and the Colorado Plateau

1(1)–2(2) [four numbers only] Spring 1995–Fall/Winter 1996

Frequency: semiannual

#### Plateau Journal

[1(1)]-8(1) [Vol. 1, no. 1 and Vol. 3, no. 2 not numbered]

Summer 1997-Spring/Summer 2004

Frequency: semiannual

(continued)

#### NAME CHANGES AND NUMERATION NOTES

#### Plateau

[second series]: Grand Canyon Natural History Association/Museum of Northern Arizona

Plateau: The Land and People of the Colorado Plateau

1(1)-2(2)

Fall/Winter 2004-Fall/Winter 2005-2006

Frequency: semiannual

[Vol. 1, no. 1 (2004), includes a brief background statement (p. [4]) of the publishing history of *Plateau*, *Cañon Journal*, and *Plateau Journal*, and includes a notice about the name changes on the inside front cover of the Fall/Winter 2004 issue, but the second series of the title *Plateau* is not otherwise stated]

[Vol. 2, no. 2 (Fall/Winter 2005-2006) gives credit only as Museum of Northern Arizona]

#### Sojourns

1(1)-12(1)

Winter/Spring 2006-Winter/Spring 2017

Frequency: semiannual and annual [together irregular]

[NOTE: Issue numbering within volumes includes no. 1 even when no. 2 is absent from the volume]

CEASED

## Grand Canyon Natural History Association U.S. National Park Service, Grand Canyon National Park

#### **Grand Canyon Nature Notes**

[Grand Canyon Natural History Association]

1(1)-9(12) 1926-1935

Frequency: month [occasionally irregular]

CEASED, but see farther below for an implied continuation under another title and imprint

Vol. 3, no. 6 (December 1928) was misnumbered as no. 5 Vol. 9, no. 6 (September 1934) was misnumbered as no. 7

The masthead title in all issues is Grand Canyon Nature Notes, but the cover title varies as follows:

Nature Notes of Grand Canyon	1(1)-3(8)	March 1926–February 1929
Grand Canyon Nature Notes	3(9)-3(10)	May-June 1929
Nature Notes of Grand Canyon	3(11)	July 1929
Grand Canyon Nature Notes	3(12)	August 1929
Nature Notes of Grand Canyon	4(1)	September 1929
Nature Notes : Grand Canyon	4(2)	October 1929
Nature Notes of Grand Canyon	4(3)-4(4)	November-December 1929
Nature Notes from the Grand Canyon	4(5)-4(7)	March-May 1930
Nature Notes : Grand Canyon	4(8)	June 1930
Nature Notes from the Grand Canyon	4(9)	July 1930
Grand Canyon Nature Notes	4(10)	August 1930
Nature Notes from the Grand Canyon	4(11)-5(2)	September-December 1930
Nature Notes : Grand Canyon	5(3)	January 1931
Grand Canyon Nature Notes	5(4)	February 1931
Nature Notes : Grand Canyon	5(5)-5(6)	March-April 1931
Grand Canyon Nature Notes	5(7)-end	May 1931-end

By convention, the dates of publication for *Grand Canyon Nature Notes* have been cited as month and year, intimating that it was a serial dated by month. However, the earlier issues were dated with specific dates, which also illustrate that it was not always precisely issued monthly, nor that each volume began in the same month of a year; further, various typographical errors were introduced and corrected on the mimeographed forms. Following is a list of stated dates of issue, and notes on emendations:

Each issue in Volumes 1-3 is individually paginated.

```
Vol. 1, no. 1
                March 6, 1926
Vol. 1, no. 2
                April 7, 1926
                May 13, 1927 [with strikeover 1926]
Vol. 1, no. 3
Vol. 1, no. 4
                June 26, 1926
Vol. 1, no. 5
                August 16, 1926
Vol. 1, no. 6
                September 22, 1926
                October 11, 1926 ["October" overwritten by hand, "Nov."]
Vol. 1, no. 7
                December 16, 1926 [issue number "7" overwritten by hand, "8"]
Vol. 1, no. 8
Vol. 1, no. 9
                January 10, 1927
Vol. 1, no. 10
                February 8, 1927 [issue number badly typed, overwritten by hand, "10"]
                March 1, 1927 [with note, p. 4: "The above notes were written with the intention of
Vol. 1, no. 11
                   mailing them out March 1st. However, the absence of the Park Naturalist from the
                    Park, from the latter part of February until April 16th, prevented their issue until this
                   time."]

                November 30, 1930 [cover indicates "Nov.1930"]
                December 31, 1930 [cover indicates "Dec.1930"]
Vol. 5, no. 2
```

Beginning with Vol. 5, no. 3 (January 1931) dates are given only as month and year.

Special Note: In this bibliography numerous items in early issues of *Grand Canyon Nature Notes* have been attributed without author (as "Anonymous" by convention). However, beginning with Vol. 1, no. 12 (May 31, 1927), the masthead on p. 1 indicates a by-line of G. E. Sturdevant for whole issues, and citations have thus been emended where necessary. After Sturdevant's death in February 1929, whole-issue by-lines were not continued.

(continued)

#### NAME CHANGES AND NUMERATION NOTES

#### **Nature Notes**

[U.S. National Park Service, Grand Canyon National Park]

10(1)-23(1) Fall 1994-Summer 2008

Frequency: quarter, 10(1)-14(4); semiannual, 15(1)-21(2); annual, 22(1)-23(1)

#### **CEASED**

Begins with Vol. 10, thus.

Vol. 10 during the quarterly production period comprises nos. 1, 2 only.

Vols. 22, 23 each comprise no. 1 only, thus are designated as an annual production.

*Nature Notes* is intimated by its volume numbering to continue *Grand Canyon Nature Notes* (see above), even though a hiatus of some 60 years separates them. However, take notice as well of the new imprint.

**Disambiguation.** Grand Canyon Nature Notes was published partly under the auspices of the National Park Service during a time in which the Grand Canyon Natural History Association was partly supported by the work of NPS employees (the association was founded in 1932). Today, cooperating associations in the parks are not-for-profit organizations that independently assist the educational and interpretive missions of the parks they serve; NPS employees do not participate in the administration or routine functions of the cooperating associations. However, the cooperating associations as entities may contribute support to the non-administrative operations of the national park or other unit they support. The "continuation" of this serial as Nature Notes was produced solely by the U.S. National Park Service at Grand Canyon National Park, although it is likely that the costs of printing may have been supported by the Grand Canyon Association (which had organizationally changed its name in October 1994).]

2(1)-5(6) March 1991-June 1994
Frequency: bimonthly, quarterly through 4[2] (March 1993, no issue-number); monthly 4(3)–5(6) (May 1993–June 1994) except 4(9) (November/December 1993)
This title split into a continuation of the newsletter as <i>The Bulletin</i> (beginning with vol. 1, no. 1) and the periodical <i>O' Pioneer</i> (which continued the enumeration of <i>Grand Canyon Pioneers Society Newsletter</i> )
(continued)

#### NAME CHANGES AND NUMERATION NOTES

#### The Bulletin

[1(1)]-21(4) [Vol. 1, no. 1 not numbered] July 1997-Fall 2017

Frequency: month, irregular, quarter

#### **CEASED**

"The Bulletin" continued as a section within The Ol' Pioneer beginning with 29(1) Winter 2018

#### **Periodical**

#### Rimmin'

1(1)-7( ) March 1985-1992

Frequency: [?]

Volumes 1-5, 1985-1989; 6, 1990/1991; 7, 1992 [not all issues have been seen]

#### O' Pioneer

New title, but continues the enumeration of the *Grand Canyon Pioneers Society Newsletter* 5(7)-7(3) July 1994–March 1996

July 1994-March 1990

Frequency: month

#### The Ol' Pioneer

7(4)-[current] April 1996-[current]

Frequency: month; quarter beginning with Summer 1997 when additional news began to be published in *The Bulletin*; also irregular (3–4 issues/year); Special Edition December 2001

Fall 2007 issue mistakenly labeled 18(3). There was no 18(2) for vol. 18.

19(1) Spring 2008 mistakenly also labeled on masthead (p. 2) as 18(3) Fall 2007; correct on cover.

Fall 2008 issue mistakenly numbered 20(2); it should be 19(2); notice printed in Spring 2009 20(1) issue.

Summer 2014 issue mistakenly indicates Spring 2014 on masthead (p. 2); correct on cover.

Spring 2015 issue: endnotes for article by Jim Ohlman available only with online version; same layout, continuing the pagination for the print issue, 17-19.

Beginning with Winter 2018 issue, the discontinued newsletter, *The Bulletin*, appears as a separate section within *The Ol' Pioneer*.

  - 2. Comparable Bibliographical Productions for National Park Service Units

by Earle E. Spamer

FOR MORE THAN A CENTURY bibliographical lists have accounted for publications about the Grand Canyon and the Colorado River. The earliest lists did not focus on these regions except within larger compilations; for example, a bibliography about Arizona. They were modest achievements primarily because they focused on the major and most interesting productions then available—when of course there also were fewer of them. They cited what even then were iconic works, which at the time were not so old as we view them now, and newer works that were in those days part of current-reading lists. Even after the creation of the National Park Service in 1916 and the raising of Grand Canyon National Monument to national park status in 1919, no special efforts were made to establish a comprehensive bibliographical understanding of what had been written about the Grand Canyon, or for that matter any of the national park units. It was not until the Depression era of the 1930s, and government-funded jobs programs like those of the Work Projects Administration (renamed Works Progress Administration in 1939), which helped raise civilian morale and national economy, that more serious efforts were made to produce something comprehensive.

## 1

## Earlier General Bibliographies for the Grand Canyon and the Colorado River

The bibliographical listings in Part 1 of the Grand Canon Volume 1/Part A contain bibliographies and similar fact-finding compilations like indices. One will find there numerous Grand Canyon–Colorado River lists. Some are inclusions in larger works; others are mimeographed or otherwise inexpensively produced documents with relatively limited distribution. They all are traditional in scope; usually the forms of the citations they contain are not terribly comprehensive, sometimes lacking in precision that makes the task of locating copies of items more difficult.

Ignoring many special-interest bibliographies—for example, geology, botany, or ornithology—the chronological listing of more general bibliographies below tells a story of ambitious and broad projects. This selection of works includes titles that relate to the Grand Canyon or the Colorado River even though in many cases the substantive part of the bibliography may be more broadly "Arizona", or an even greater geographical expanse, containing far more citations about other aspects of the state or region that are extralimital to THE GRAND CANON. Some of them, however, include specially itemized sections for either or both the Grand Canyon and the Colorado River.

The list farther below is informative too for what it does *not* contain. Only a couple of the products offer an accounting as comprehensive as possible specifically for the Grand Canyon. The majority of products are cursory or repetitive in their coverage of the locales of interest to THE GRAND CANON; all of them include mostly the same material, with minor differences or through chronological updating. Even when the Grand Canyon is specially cited in these earlier works, focuses are still on the national park, which at the time had significantly less acreage than it has today. By intimation they included the whole of the physiographic canyon, of course, but the selective focuses were based on the political unit. Furthermore, those works that specially listed citations relating to the Colorado River more often embraced the entire river basin (THE GRAND CANON is restricted to the Lower Basin).

A 1919 National Park Service bibliography for the new Grand Canyon National Park, included in the Department of the Interior's annual report, is a patchwork compilation of the "usual" stand-outs; for example, the iconic exploration and research monographs of Joseph C. Ives (1861), John W. Powell (1875), and Clarence E. Dutton (1882), and a selection of magazine articles that seems to have been collated more fortuitously than from

## • THE GRAND CANON VOLUME 1, PART A—INTRODUCTION • SURVEYS

careful research (that is, whatever was at hand). Even though the Grand Canyon was then a newly established national park, the canyon had long been a national destination for travelers and researchers. Legally protected variously as a forest reserve, game preserve, and national monument, the Grand Canyon was a *de facto* national park for some years before its formal designation. As demonstrated by citations in THE GRAND CANON here, books and articles on the Grand Canyon had long been pulished with exhaustive attention, which makes the 1919 official list all the more peculiar for what was selected to be in it.

Hazel Voth and Harold Gill's 1939 production, *Grand Canyon National Park; A Bibliography* was the first serious attempt to compile a Grand Canyon bibliography, the result of work done with the cooperation of the Work Projects Administration (renamed Works Progress Administration in 1939) and the Civilian Conservation Corps. Typewritten and mimeographed for distribution, its 114 pages centered on the National Park Service unit, but by the nature of the contents of the works cited it unavoidably, and preferably, embraced a much larger portion of Southwest landscape and history. It was the first openly "official" bibliography about the canyon and the river from the perspective of the National Park Service; thus it was the first such administrative bibliographical tool for the park.

The list that follows, selected from PART 1 of THE GRAND CANON bibliography, is a chronology of basic, non-specialized reference works that precede or are contemporary with the editions of THE GRAND CANON; there are numerous others that have special topical focuses, as one will see by examining Part 1. These works, compiled for different purposes and audiences, are nevertheless the principal productions on which generations of researchers and administrators have relied; just a few were created after the first published Grand Canyon–Lower Colorado River bibliography in 1981. Inserted into this chronology are my comments on them, and a chronology of earlier work on what now is THE GRAND CANON.

1900 George Wharton James, "Bibliography of the Grand Canyon Region", in In and Around the Grand Canyon. Boston: Little, Brown, and Co., pp. 339-341.

A cursory listing of books and articles known to the author. Lacks details.
1900 Joseph Amasa Munk, Bibliography of Arizona books, pamphlets and periodicals in the library of Dr. J. A. Munk. Los Angeles: [privately printed], 28 pp.

Focused only on the holdings of one individual's personal, but extensive, collection.
1908 Joseph Amasa Munk, Arizona bibliography: a private collection of Arizoniana. Los Angeles: [privately printed], 98 pp.

Expanded from the 1900 listing.

#### SURVEYS

- 1913 Estelle Lutrell, A bibliographical list of books, pamphlets and articles on Arizona in the University of Arizona Library. Tucson: University of Arizona, 60 pp. ["Grand Canyon" and "Colorado River" lists, p. 37.]

  Very limited coverage for the canyon and river, though restricted to the holdings of one institution.
- 1914 Hector Alliot, Bibliography of Arizona; being the record of literature collected by Joseph Amasa Munk, M.D., and donated by him to the Southwest Museum of Los Angeles, California. Los Angeles: The Southwest Museum, 3rd ed. 431 pp.

  Focused only on the holdings of one individual's personal, but extensive, collection.
- 1919 "Bibliography of books, government reports, and magazine articles on Grand Canyon National Park." From: Report of the Director of the National Park Service. In: Reports of the U.S. Department of the Interior for the fiscal year ended June 30, 1919. Volume I. Washington, D.C.: U.S. Government Printing Office, pp. 1256-1260. This is the first compilation specifically for Grand Canyon National Park, although it is limited in scope.
- B. L. Walsworth, The Colorado River and its tributaries: A bibliography of books, magazine articles, and government documents in the Riverside Public Library. Riverside, California, 132 pp.

  Focused on the holdings of one library.
- International Water Commission, American Section, "Selected classified list of references and sources relating to utilization of lower Colorado River." In:

  Report of the American Section of the International Water Commission, United States and Mexico. U.S. 71st Congress, 2nd Session, House Document 359, pp. 97-98.

  Limited in scope to the international issues surrounding the use of the lower Colorado River and its diversions for agriculture and power production; an early representation of government-sponsored bibliography for this region.
- 1935 **The Colorado River, with special reference to the Boulder Dam.** [Washington, D.C.]: Library of Congress, Division of Bibliography, 47 pp.

  The first water-supply bibliography for the Colorado River, focused on and coincident with the construction of Hoover Dam.
- Hazel Hunt Voth and Harold Gill, Grand Canyon National Park; a bibliography.
   U.S. National Park Service, 114 pp.
   The first comprehensive bibliography for Grand Canyon National Park and the definitive work for decades thereafter.

#### **SURVEYS**

U.S. National Park Service, A bibliography of the national parks and monuments west of the Mississippi River. Volume 2. Washington, D.C.: U.S. National Park Service (compiled at the Western Museum Laboratories of the National Park Service with assistance provided by the Work Projects Administration and the Civilian Conservation Corps). [Boulder Dam Recreation Area, pp. 1-2; Grand Canyon, pp. 3-131; southwestern national monuments, p. 132.]

The Grand Canyon portion is in large part probably extracted from the 1939 work by Voth and Gill.

1953 Francis P. Farquhar, **The books of the Colorado River and the Grand Canyon: a selective bibliography.** Los Angeles: Glen Dawson, 75 pp. [600 copies.] [This has been reprinted in 1991 and 2003. A sequel for 1953-2003 is Ford (2003).]

The "gold standard" of Grand Canyon and Colorado River bibliographies as a selection of important and "worthwhile" titles.

1955 Lawrence Clark Powell, **Heart of the Southwest: A selective bibliography of novels, stories and tales laid in Arizona and New Mexico and adjacent lands.**Los Angeles: Printed for Dawson's Book Shop at the Platin Press, 42 pp., map.

An important contribution to regional bibliography for its selection of creative works.

Lawrence Clark Powell, **A southwestern century: A bibliography of one hundred books of non fiction about the Southwest** (illustrated by Tom Lea). Van Nuys, California: J. E. Reynolds, 29 pp.

In the vein of Farquhar's 1953 volume for the canyon and river, Powell's work is a personal selection embracing the greater Southwest.

Donald M. Powell, **An Arizona gathering**; a bibliography of Arizoniana, **1950-1959**. Tucson: Arizona Pioneers' Historical Society, 77 pp. (Pamphlet Series, no. 2) [Limited to 400 copies. Superseded by Powell (1973).]

Limited by its coverage of one decade.

David M. Goodman, Arizona odyssey; bibliographic adventures in nineteenth-century magazines. Tempe, Arizona: Arizona Historical Foundation, 360 pp.

A very useful compendium as it deals with magazine articles of the 1800s; however, numerous errors have been identified (and of those found and pertinent to the Grand Canyon and lower Colorado River regions, emended in The Grand Canon).

1969 Guidon Books, **The Colorado River, people and places**; a catalog of books, pamphlets, maps and manuscripts (introduction by C. Gregory Crampton). Scottsdale, Arizona: Guidon Books, 84 pp.

Useful for its selection of titles and annotations.

1970 Ruth L. Ruder, with Mr. and Mrs. Peter S. Bennett, **Selected list of references on the Grand Canyon area**. Museum of Northern Arizona, 42 pp. [mimeographed].

A general work.

#### **SURVEYS**

- 1973 Donald M. Powell, **An Arizona gathering II, 1950-1969; an annotated bibliography.** Tucson: University of Arizona Press, 207 pp.

  An expansion of the 1960 bibliography, limited by its coverage of two decades.
- 1974 Karen Ravitch, **Wide deeps, big water; a bibliographic guide to the Grand Canyon and the Colorado River.** Master's thesis, [institution not determined], 66 pp.
  - Copies seen, but a curious item not subsequently catalogued in standard library catalogues online; and the author seems never to have published anything further.
- 1974 Richard Yates and Mary Marshall, **The Lower Colorado River: A bibliography.**Yuma, Arizona: Western Arizona College Press, 153 pp.

  The first purposely focused bibliography for the region below Grand Canyon.
- 1974 [Compiling the Bibliography of the Grand Canyon and the Lower Colorado River begun by Earle Spamer.]
- Dennis Kubly, An annotated bibliography of limnologically related research on the Colorado River and its major tributaries in the region of Marble and Grand Canyons. Grand Canyon National Park, Colorado River Research Series, Contribution no. 9, under contract no. PO PX821041350, 27 pp.
  - Noted here as perhaps the first definitive bibliography of a special subject confined to the Colorado River through Grand Canyon National Park.
- 1978 Catherine T. Nutt and the Editors of Discovery, **Grand Canyon and the Colorado Plateau; a bibliography of selected titles in the NAU Libraries.** Northern Arizona

  University Libraries, 64 pp. (Discovery Series, no. 14.)

  As indicated, selective and focused on the collections of one institution.
- 1979 Gerald Stahler, **The Grand Canyon dams controversy, 1963-1968:** A **bibliographic research guide.** Monticello, Illinois: Vance Bibliographies, 41 pp. (Public Administration Series: Bibliography; no. P-274.)

  This bibliography of an important social and administrative issue for Grand Canyon
  - This bibliography of an important social and administrative issue for Grand Canyon also includes references that do not have direct bearing on the Grand Canyon, but instead are references to the context of contemporary issues of politics and the environment.
- 1981 [First edition of Earle Spamer's Bibliography of the Grand Canyon and the Lower Colorado River: Grand Canyon Natural History Association, Monograph 2.]
- Anthony J. Rose, Annotated bibliography of Colorado Plateau holdings of the Grand Canyon National Park Research Library. Northern Arizona University, Field Work Experience, History 608, [146] pp. including 504 photocopied 3-x-5-inch cards
  - An expanded coverage beyond the focus of Spamer's 1981 first edition of the Grand Canyon-lower Colorado River bibliography; not meant for publication but otherwise indispensable for its larger scope and in a collection as assembled by the Grand Canyon National Park Research Library.

#### **SURVEYS**

- 1990 [Second edition of Earle Spamer's Bibliography of the Grand Canyon and the Lower Colorado River: Grand Canyon Natural History Association, Monograph 8.]
- 1991 Francis P. Farquhar. **The books of the Colorado River and the Grand Canyon.**Austin, Texas: W M Morrison Books, 41 pp.; includes [5]-page addendum, "Index of authors and editors, with titles added to the index for the 1991 edition" [by W. M. Morrison].

Reprint of the 1953 edition; reset.

1992 Arizona State Library Association, Children's Services Roundtable, **Arizona** heritage: Bibliography of materials and directory of authors, illustrators and storytellers for teachers, librarians and parents. Arizona Humanities Council, 144 pp.

The first educationally-focused bibliography for the region.

- 1993 ["Supplement 1" to the second edition of Earle Spamer's Bibliography of the Grand Canyon and the Lower Colorado River: Grand Canyon Natural History Association, Monograph 8, Supplement 1.] [No more supplements were produced in this series.]
- 2000 [The digitally searchable "Internet Edition" of Earle Spamer's A Bibliography of the Grand Canyon and the Lower Colorado River first posted online on the Grand Canyon Association website, January 2000. It is frequently updated through May 2015; removed in October 2021.]
- Francis P. Farquhar. The books of the Colorado River and the Grand Canyon: a selective bibliography (ed., endnotes by Daniel F. Cassidy; expanded index by Richard D. Quartaroli). Flagstaff, Arizona: Fretwater Press, 98 pp. ("Reprinted 2003 by Five Quail Books, Prescott, Arizona, in cooperation with Fretwater Press, Flagstaff, Arizona".)
  - Reprint of the 1953 ed., with endnotes and an expanded index. Printing is reset but format, typography and binding reproduce that of Farquhar's original.
- 2003 Mike S. Ford, The books of the Grand Canyon, the Colorado River, the Green River and the Colorado Plateau, 1953-2003; a selective bibliography. Flagstaff, Arizona: Fretwater Press, 178 pp.

The important sequel to Farquhar's 1953 volume; in precisely the same vein.

- 2004 Marcia L. Thomas, **John Wesley Powell; an annotated bibliography.** Westport, Connecticut: Praeger Publishers, 256 [259] pp. (Bibliographies and Indexes in American History, No. 49.)
  - Indispensable for studies about the man and his work, embracing far more than his celebrated exploits on the Colorado River.
- 2006 A. Leeper, "The grandest canyon of them all." Book Links, 16(1): 32-34.

Contains lists of internet website links. An interesting item that should be useful in tracking the extinction rates of these selected online resources for the Grand Canyon. (While such items are useful for their currentness when published, they are not useful for retrospective documentation such as may be required in management issues and administrative affairs.)

- 2025 [Second edition of Grand Canyon, Colossal Mirror: the Term "Grand Canyon" as Used in Geographical Nomenclature, Analogy, Metaphor, and Neology, with an Appendix on Colorado River Nomenclature: Volume 3 of The Grand Canon.]

In this list one sees that until recently there have been few efforts to very comprehensively document the research and creative works that relate to the Grand Canyon and Colorado River. There have been numerous efforts to produce selected lists,

though. Yet because of their utilitarian uses most of them held little expectation for broad dissemination.

Part 1 of THE GRAND CANON lists many more bibliographies and comparable productions that specially focus on one or another precise topic with the regions of interest here. One example is Goulet and LaGory's 2009 extensively annotated bibliography on the humpback chub<sup>1</sup>, a Colorado River fish whose limited Grand Canyon habitat is endangered by the river's human-influenced flow regime, the result of the operation of Glen Canyon Dam upstream from Marble and Grand Canyons. This work was produced for the Western Area Power Administration (WAPA) by the Environmental Science Division of the Argonne National Laboratory. It obviously serves as a comprehensive guide to previous research for those working on environmental studies of the fishes of the Colorado River in Grand Canyon, comprising a review of the scientific and administrative literature on the subject. However, in terms of its primary purpose, it was produced in response to administrative needs of WAPA, the operating entity for power production and distribution in the West, including Glen Canyon Dam. Thus, a bibliography can serve both a widely interested audience and function as an informational guidance document for resource managers and administrative professionals; and it feasibly can be used as a summary document in matters of legislative action and judicial opinion.

THE GRAND CANON is not an annotated bibliography even though many of its citations include notations that move in this direction. It can, however, be used to produce a fully annotated bibliography, with appropriate editorial comments, either of the whole or for selected components. Similarly, this bibliography can be excerpted to create more focused bibliographies for any number of purposes.

C. T. Goulet and K. E. LaGory, Annotated Bibliography for the Humpback Chub (Gila cypha) with Emphasis on the Grand Canyon Population (Environmental Science Division, Argonne National Laboratory, Argonne, Illinois, for Western Area Power Administration, Colorado River Storage Project Management Center, Salt Lake City, Utah, 1990), 236 pp.

# 2 Co

# Comparable Bibliographical Productions for National Park Service Units<sup>2</sup>

THE GRAND CANON is the descendant of previous bibliographies and was the source document for the Internet Edition while that was online 2000–2021. The whole work has been independently compiled since 1974; and since 1981 the project has been supported through publication, distribution, and web access by the Grand Canyon Association (now the Grand Canyon Conservancy), a cooperating association with Grand Canyon National Park. The content of the bibliography, however, has been wholly my responsibility, with the added benefit of various contributors of citations who are cited in the acknowledgements of its various editions.

The earlier print editions were distributed as part of the Association's *Monograph* series, most of which had been distributed *gratis* as a service to academic institutions and individual researchers. In this way the bibliography furthers the Association's mission to "benefit Grand Canyon National Park" and to provide "premier educational opportunities about the natural and cultural history of the region". In so doing it also provides a research tool to the park's administrative and interpretive staffs. Grand Canyon National Park's website also includes links to the Association and to the bibliography, something that, as is explained below, is still a unique public service within the National Park System.

The survey that follows is one that was conducted in 2009–2010. Things have changed quite a lot in the past decade in the way the National Park Service expresses its online presence, which regretfully has significantly diminished the number of online bibliographical resources that were previously noted. The new presence shows far more standardization of NPS unit web pages. Layouts and the types of information follow the same model now, which favors streamlined web pages designed for conventional screens and (preferably, it seems) portable personal devices (smartphones, tablets, etc.). Examples for Grand Canyon National Park and Lake Mead National Recreation Area, from 2018, are shown *farther below* as they appear on conventional screens.

This standardization has modified the kinds and amounts of materials that once had been accessed through these webpages. Whereas various "selected" bibliographies were noted on these webpages in the 2010 study, none seem to be present now, reflecting the

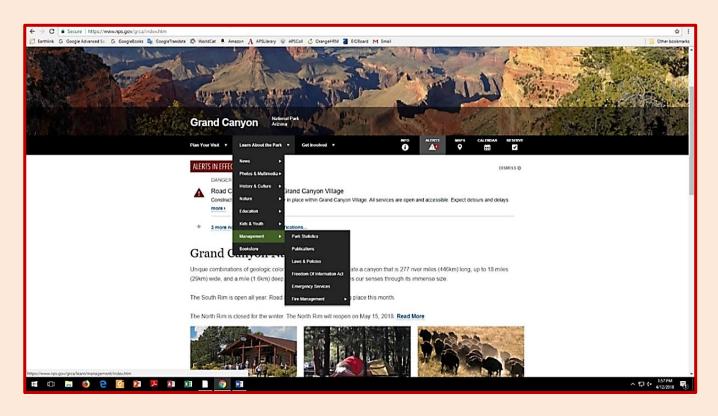

This section was first published in the first edition of THE GRAND CANON (2012). A resurvey was begun for the third edition (2019), but it encountered technological and thematic changes to National Park Service websites that made comparison unreliable, if not impossible. This was due to format and user viewing-style changes but principally due to content changes on those websites. Much of the needed information is no longer present on NPS unit-specific sites; a move toward substantially reducing content. The table from 2012 is thus reproduced here, with emendations to the preliminary remarks so as to accommodate some changes.

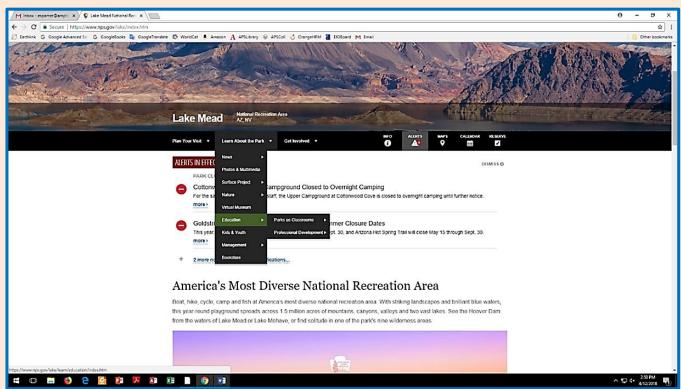

current streamlined format. Even the breadth of management documents so accessed is less through these webpages; and it is among them that are found various bibliographies noted to have been parts of management plans and various other reports reposted to the website or linked from it. Accordingly, the framework of the 2010 study was informative enough to be worthwile reviewing it again here. It had also taken note of available printed bibliographies, which have in any case not been substantially increased in that time.

illustrations follow

### **SURVEYS**

THE FOCUS of this survey is on printed or web-based access to bibliographical resources about individual, politically defined and geographically restricted National Park Service units. During the research done toward this study, comparisons were also made in more general fashion with similar governmental units charged with the land, resource, and site management. These other (non-Park Service) governmental units consistently show less attention to bibliographical resources in public venues, even as compared to the attention given these resources by National Park Service units, thus the attention here on the Park Service. This in itself is telling; that the National Park Service has continually demonstrated at least a perfunctory acknowledgment of the research and administrative values of bibliographies.

The bibliographical resources searched for are those that may be available through publication under government or affiliate imprints, or posted directly to the units' websites. The aim here is to identify those units of the National Park Service that have themselves produced, promoted or cited accountings of publications that relate to those units through either print references or their websites.

As noted, THE GRAND CANON extends its coverage beyond Grand Canyon National Park, embracing lands overseen by numerous other agencies of federal and state governments as well as Native American and privately-owned lands. Yet as a whole it serves to document the works about a unique, conterminous landscape, its resources and peoples. Only conceptually it is all awarded to the Grand Canyon and the Colorado River, but nonetheless the search for comparable bibliographical coverage, past or present, has likewise been extended to the entire region, its administratively overseen parts at federal, state, and similar levels of oversight. The search has been to identify, specifically, those research tools that function in the same fashion as THE GRAND CANON.

It seems incongruous that other than THE GRAND CANON no comparably robust and broadly accessible current accounting of publications has been found for any other unit administered by the National Park Service or other federal public-lands agencies. One might assume that certain National Park System units—two high-profile examples are Gettysburg National Military Historical Park and Independence National Historical Park, both highly visited areas each with a long history of detailed scholarship and popular writing—would have tremendous bibliographical research resources readily available; not just on-site at these units' research centers but widely, through publication or website posting. Thus far none have been identified. Scholars can produce citations that will inform users of numerous exceedingly well-documented bibliographical compendia for locations

#### **SURVEYS**

such as these<sup>3</sup>, perhaps even some annotated and critical overviews of existing literature on the specific historical fields on which they focus. It is quite a different thing, though, to find bibliographies that cover *all subjects* for a *geographically delimited* service unit or for a geographical region embracing it.

There are separate, detailed resource reviews that are "off the radar" of traditional bibliographies, too. One such item (found randomly) is geographically close to but out of scope with THE GRAND CANON —An Overview of the Cultural Resources of the Western Mojave Desert<sup>4</sup>, which is particularly interesting because it also describes a detailed literature-search project. Surely many more similar productions of lesser or greater ambition are available for discrete geographical areas like that covered by THE GRAND CANON or the Western Mojave Desert project; however, they are not easily identified or adequately advertised, nor are they usually noticed for awards. The second edition (1990) of Bibliography of the Grand Canyon and the Lower Colorado River received an Award of Honorable Mention in Publications in the 1991–1992 National Park Service Cooperating Association Publications Competition.

Bibliographies that relate to national parks in general, or national parks of particular regions of the country, are also commonly found. They contextually overlap with the kind of coverage provided by bibliographies that pertain (or would pertain) to specific Park Service units.

The only comprehensive bibliographical tool that approached THE GRAND CANON in scope and content was the *Greater Yellowstone Bibliography (GYB)* online, hosted by the University of Wyoming Libraries.<sup>5</sup> Although apparently no longer available, it is worth

For example, a masterful bibliography of the Gettysburg military campaign (as opposed to all things about today's Gettysburg National Military Historical Park) may be seen in Richard Allen Sauers, *The Gettysburg Campaign, June 3-August 1, 1863; a Comprehensive, Selectively Annotated Bibliography* (Greenwood Press, Westport, Connecticut, 1982). For the second example, it seems superfluous to select a similar kind of bibliography for Philadelphia's Independence National Historical Park or its historical events given the proliferation of Colonial-era reference works that are available. However, of particular note is an 8,000-item *unpublished* bibliography that was assembled by 1953 for restoration work on Independence Hall, although it included large numbers of manuscript materials and citations from photographic archives. That was a prodigious work, one which is representative of many of the types of unpublished resources that may be available for select park units. (Information on the Independence Hall work from Constance M. Greiff, *Independence; the Creation of a National Park*, University of Pennsylvania Press, Philadelphia, 1987.) Nonetheless, Independence National Historical Park still lacks an all-encompassing and current master bibliography among its easily accessed resources such as those examined here (Karen Stevens, Archivist, Independence National Historical Park, personal communication).

Gary E. Stickel and Lois J. Weinman-Roberts, An Overview of the Cultural Resources of the Western Mojave Desert, Eric W. Ritter, general ed., Environmental Research Archaeologists: A Scientific Consortium, Los Angeles, 1980, for U.S. Bureau of Land Management, California Desert Planning Program, Riverside.

Greater Yellowstone Bibliography (GYB), "developed by William O. Van Arsdale with help from Tami Hert and technical web support by the UW Libraries, Library Technology Support, October 2000. Updated 8/8/2001." [University of Wyoming Libraries, Laramie] http://www-lib.uwyo.edu/db/ynp/default.cfm. William O. Van

#### **SURVEYS**

noting its scope. The website indicated that the GYB was last updated in 2001 and "contains over 28,900 bibliographic citations to scholarly, popular, professional, and creative literature about the greater Yellowstone region of Idaho, Montana, and Wyoming". But the structure and function of the Yellowstone production differed greatly from those of THE GRAND CANON. Users interacted with it only through a single webpage, its search screen. Queries parsed citations only as lists of links to individual catalogue records; the search returns could not be printed or downloaded as a set of citations such as returned by the online Grand Canyon bibliography. GYB added some photographs and descriptions of artifacts, although no special effort had been made to be comprehensive. There were (and are) no earlier versions of the Yellowstone production available in printed format, and neither Yellowstone National Park nor the Yellowstone Association sponsored the GYB. Supplementing the Yellowstone work is the administratively-focused Management of the Greater Yellowstone Ecosystem; An Annotated Bibliography<sup>6</sup>, which, again, is not a production of either the park or its cooperating association. Also, A "Yellowstone Database" restricted to scientific literature was available until about 2020 although static for the previous decade; it was posted to the Washington State University website and contained "about 14,060 references".7

Arsdale, III, is a Wyoming writer and bibliographer, a professor in the University of Wyoming Libraries. *GYB* was last accessed by the compiler 1 April 2012, but when revisited 28 May 2013 it was not found, nor has it been replaced anywhere on the University of Wyoming Libraries website, or elsewhere. *GYB* had contained nearly 29,000 citations, though as a database it was not in any way visible as a contiguous, browsable whole. When it was last accessed it had not been updated in more than a decade. Since then, THE GRAND CANON has grown by tens of thousands more citations. (*E.E.S.*, April 2018.)

<sup>&</sup>lt;sup>6</sup> Tim W. Clark (project manager and contributor) and Ann H. Harvey (editor and contributor), *Management of the Greater Yellowstone Ecosystem; an Annotated Bibliography*, 2nd ed. (Northern Rockies Conservation Cooperative, Jackson, Wyoming, 1999), 92 pp., maps.

http://refbase.wsulibs.wsu.edu/yellowstone/index.php (last accessed February 18, 2020; not accessible November 13, 2021). Queries to the Yellowstone Database retrieve summary lists of pertinent publications, but to view bibliographical information one must use a hyperlink to view each individual citation, one by one. Search links on the library's page imply that there may be material that had been very recently added; these link, though, are standard links for searches in this library. The Yellowstone Database has no further additions after 2010.

#### **SURVEYS**

#### **Notes**

- A Table updated to 2021. The online bibliography, as noted in the Introduction to THE GRAND CANON, was, except for some editing, no longer updated after mid-2015 and was removed in October 2021. It is now wholly superseded by THE GRAND CANON, a searchable monographic series that now (2025) contains 111,000 items. The *Greater Yellowstone Bibliography* was, in terms of breadth of coverage for a geographical area related to National Park Service units, the closest comparable online bibliography to *A Bibliography of the Grand Canyon and Lower Colorado River*. The URL for the Yellowstone work in 2021 was https://lib-sierraapp.uwyo.edu/record=b3009633~S1 but the search link on that page was inoperative (accessed June 6, 2021); at the time that this table was first compiled the link was www-lib.uwyo.edu/db/ynp/default.cfm. The overall site is no longer accessible (16 June 2024). Information in the remaining notes is as published in the original table and remains in the present tense.
- The number of items in the *online* Grand Canyon–Lower Colorado River bibliography is taken from THE GRAND CANON (1st ed., 2012) but the opening webpage for that bibliography still counts several hundred additional citations that are no longer present in THE GRAND CANON; the disparity is explained elsewhere.
- <sup>C</sup> Searches in the Grand Canyon–Lower Colorado River Bibliography are Boolean "AND" searches; they return only the citations that meet the conditions specified by the content entered into any number of search fields (thus for example, a search for author "Dutton" and keyword "Tertiary" will return only those citations by Dutton that have "Tertiary" in the search field). Searches by default also return citations that meet plural and grammatically similar words to those entered in a field.
  - Searches in the Greater Yellowstone Bibliography are Boolean "OR" searches; they return citations that meet *all* of the conditions specified by the content entered into any number of search fields (thus for example, a search for author "Lincoln" and subject "fumaroles" will return all citations authored by "Lincoln" *as well as* all citations relating to "fumaroles").
- P Keyword searches in the Grand Canyon–Lower Colorado River bibliography search any part of the citation; wildcard characters may be used. Keyword searches will return only those words that are part of the original citations; this is not a contrived "subject" field.
- In the *Grand Canyon–Lower Colorado River bibliography*, Subject Area allows user to restrict searches to any one of 32 separate parts of the bibliography (see the Content Guide in Volume 1, Part B, for their descriptions). (The default search method searches the entire bibliography.) User-selected words or strings will be returned only if that information is included somewhere in the full citation; there is at this time no separately contrived "subject" field in this bibliography.
  - In the *Greater Yellowstone Bibliography*, Subject Keywords are restricted to key words contrived by the compilers and placed within a separate "Subject Keywords" field of the database, although it will also search by default in the "Title" field.
- F The default chronological search parameter for the bibliography is "all". Searches may be restricted to year ranges or single years by changing the values in the beginning- and end-year fields; leaving the beginning-year field blank and the default current year in the end-year field (the default setting) searches the entire database. Specific searches for *only* citations with "no date" or dates undetermined may be conducted by using the adjacent check boxes.
- Although not immediately discernable to the online user, the Grand Canyon–Lower Colorado River bibliography may be *browsed* by leaving all fields of the search screen blank (except the default ending-year field). There is, however, no current capability to jump ahead to citations farther into the list, except by advancing page by page. The number of items returned per page may be changed to any number up to 999. Also, any one subject part of the bibliography may be browsed separately by selecting that part in the drop-down "Subject Area" field and proceeding as just indicated.
- H Citations in the Grand Canyon–Lower Colorado River bibliography are cross-listed to the earlier print editions (1st ed., 1981; 2nd ed., 1990 and supplement 1993). Citations are also cross-listed to a number of standard bibliographical reference lists (as explained in the introductory section herein, Cross-listings to Reference Lists).
- I See <u>Preceding and Continuing Editions</u> in the front matter herein.

#### **SURVEYS**

**Survey.** A study of resources available for and from National Park Service units across America brings attention to how infrequently bibliographical compendia are assembled, much less promoted, for individual Park Service units. While tried-and-true library catalogues (online today) are one way to search for existing published bibliographies, a newer entranceway is through the websites both of Park Service units and their cooperating associations. Of course, this approach relies upon the administrative arrangement of a unit's website, whether sufficient time or resources were made available for creating it, and further, whether notice of research aids were made a part of it.

In 2009–2010 I conducted a study of principal bibliographical resources in the National Park System. While this survey will eventually be outdated, it serves as a benchmark for the breadth of publicly available resources during the first years when the greatly updated online Grand Canyon–lower Colorado River bibliography was available. At that time, the National Park Service's website listed 463 units in the system, from Abraham Lincoln Birthplace National Historic Site to Zion National Park.<sup>8</sup> A few of the individual units with websites had bibliographies of selected references, but more than not these were just suggested-reading lists. Many of the small units did not even have a separate website presence. It will be interesting to renew the survey in the future, to detect substantial responses over time by National Park Service units to the value and utility of comprehensive bibliographical resources prepared by or sponsored by those units on behalf of the general citizenry and Park Service staff and administrators (although perpetually at the mercy of staffing and funding).

In 2010, fifty-two National Park Service units had affiliated cooperating associations. However, only twenty-seven were formal affiliates of park units; others were wholly independent of the park units they had adopted. The purposes of these organizations are to help support the educational, interpretive and outreach services of the units with which they work; most if not all are not-for-profit organizations that are affiliated under memoranda of understanding with the National Park Service. The websites of cooperating associations (if any) were also searched for online bibliographical guides or references to available guides. Grand Canyon Association was the only one with either a master bibliography or a link to one created by another organization. (Even the *Greater Yellowstone Bibliography* cited above was not mentioned on the websites for the park or its cooperating

By January 2017 (the latest listing found on the National Park Service website in April 2017), the NPS listed 417 units, divided among: National Battlefields (11), National Battlefield Parks (4), National Battle Field Sites (1), National Military Parks (9), National Historical Parks (51), National Historic Sites (78), International Historical Sites (1), National Lakeshores (4), National Memorials (30), National Monuments (87), National Parks (59), Parkways (4), National Preserves (19), National Reserves (2), National Recreation Areas (18), National Rivers (5), National Wild and Scenic Rivers (10), National Scenic Trails (3), National Seashores (10), and other designations (11); and adding Affiliated Areas (25), National Heritage Areas (48), National Trails System (30), and National Wild and Scenic Rivers System (43).

association, although in 2010 the Yellowstone National Park website included a general link to University of Wyoming Libraries data sources.)

The survey, summarized below, includes information on published bibliographies that were derived from databases of libraries' holdings. All other information came from the websites of the Park Service units.

Most of the "Published Bibliographies" are more than several decades old, and many are of the "gray literature" genre of limited-distribution documents that are notoriously difficult for researchers to be aware of and to find. Most of them are small in size or limited to a specific topic. Only a few are comprehensive bibliographies for the unit, embracing numerous topics. The published bibliographies for thematic Park Service units (such as historic-house or social-event sites) of course direct their users not so much to site resources as to citations about the persons or events that they commemorate. In some cases they by default are small compendia restricted by the historical or temporal perspectives of the units as well as by the vigor of later historical interests and research trends.

Park units that had website presence in 2009–2010 and contained some kind of bibliographical guide are also noted in the summary below. Those that had brief suggested-reading lists *only* are not indicated in the table. Websites that contained substantive bibliographical guides are marked; those that had "selected" bibliographies or superficial lists of just a few citations are specially noted. Additional notes indicate when bibliographical guides were specialized in any way, or sourced from a management document that was in that venue not meant to be comprehensive. None of the cooperating associations (except Grand Canyon Association–now Grand Canyon Conservancy) had bibliographical resources available through their websites.

Though dated now by a decade and the impracticality of creating a new survey that could be meaningfully compared to it (as mentioned above), the survey is likely to be not very much outdated anyway because of the general lack of progress in creating and promoting bibilographical resources. This is due in part to the increasing administrative demands placed on park units that are far more utilitarian and pragmatic within the oversight and operational needs of every unit; and similarly, the outreach services of the affiliate cooperating associations seek more engaging opportunities. Only THE GRAND CANON stands out as an exception.

<sup>&</sup>lt;sup>9</sup> See the separate commentary herein regarding gray literature.

**Notes** (current at the time of the survey, 2010); see remarks at the beginning of this section regarding the lack of updating. This study is nonetheless still instructive.

- \* Cooperating associations are noticed here only when they are linked to, or otherwise advertised by, the Park Service unit's web pages, or if the websites of the cooperating associations note their sponsorship of or advertise bibliographical resources; this information, when present, is included in pertinent Notes (below). It is likely that other resources have been overlooked as the result of undersupported webpage development for some Park Service units or cooperating associations, which may reflect more upon administrative issues for agency outreach rather than a complete absence of bibliographical resources.
- <sup>†</sup> *Printed* bibliographies have been located through library catalogues online, including the library source list for the National Park Service. Many are the result of Depression-era federal work projects, or are independently compiled works; none apparently are as comprehensively arranged as is the current bibliography.

All web access to National Park Service units is through the NPS main page, http://www.nps.gov

#### **Enumerated Notes**

Bibliographies noted as parts of management plans and other administrative reports are limited in coverage.

- 1. Research bibliography in progress
- 2. Crater Lake Natural History Association is the cooperating association for the national park and Oregon Caves National Monument. The Crater Lake Institute, which is not an affiliate of the national park nor is formally a cooperating association, promotes through its website a modest Research Bibliography of 300 titles in 16 subject areas. Unaffiliated resources such as this one may be noticed for other park units. When studies are made of formal park relations with cooperating associations attention should be held to distinguish between informal and formal relationships with the park
- 3. Website refers users to a 2008 published history of the national monument that includes an "extensive bibliography"  $^{\prime\prime}$
- 4. Bibliography included as part of Historical Resource Study
- 5. An online bibliography is available for the subject areas of natural history and environment, and for recent research; abstracts and public-domain articles can be downloaded
- 6. Extensive online bibliography available through cooperating association; park website includes some bibliographical entries under its natural science sections
- 7. Bibliography included as part of Historical Resource Study
- 8. Website cites a 1993 annotated bibliography of biological collections from the national park
- 9. Bibliography included as part of Historical Resource Study
- 10. Bibliography included in Cultural Landscape Report
- 11. Website refers to the park holding a "complete natural resource bibliography"
- 12. Bibliography included as part of Management Plan
- 13. Bibliography included as part of Historical Resource Study
- 14. Website includes a facsimile of 1929 park article that notes, "a complete bibliography of literature on Mount Rainier has been prepared"

#### **SURVEYS**

- 15. The American Samoa Digital Library includes a comprehensive bibliography; links to University of Hawaii, Pacific Islands Coral Reef Program Environmental Reports and Publications—American and (western) Samoa, by the park's Inventory and Monitoring staff; comprising thousands of citations, with PDF downloads for many of them
- 16. Website contains an external link to U.S. Forest Service Nez Perce annotated bibliography
- 17. Website contains an external link to the Bibliography of the Tomales Bay Biodiversity Inventory
- 18. Bibliography included as part of Comprehensive Management Use Plan
- 19. Website contains an external link to University of Northern Colorado's bibliography for Rocky Mountain National Park
- 20. Website includes two research bibliographies related to park themes
- 21. Website includes a "Pig War Bibliography"
- 22. Website refers to a Natural Resources Bibliography, which has not been located
- 23. Bibliography included as part of Cultural Landscape Report
- 24. Bibliography included as part of General Management Plan
- 25. Bibliography included as part of Park History document
- 26. Bibliography included as part of History Trail Feasibility Study
- 27. Bibliography included as part of Cultural Landscape Report
- 28. See <u>above</u> [p. 530] for remarks concerning the Greater Yellowstone Bibliography online via the University of Wyoming Libraries
- 29. Bibliography included as part of General Management Plan

There is no significant correlation between the physical size, visitation profile or subjective "fame" of a Park Service unit and the presence of bibliographical resources produced by Park Service or other government personnel or by a unit's cooperating association. Some units for which one would expect to find at least an old bibliography do not seem to have such documentation, or at least none are prominently noted by that unit. Possibly, the resources available to the me had not captured information about pertinent resources, meaning either that such documents for those units may be all the more obscure or that the units do not place such documents among their principal resources.

It seems surprising that so many of the smaller units have bibliographical resources, especially published documents even if they are brief and limited in scope. This may be due to the limited number of general resources that pertain to these small units, making it easier to make such compilations. This may also reflect short historical timeframes or the relative obscurity of (hence fewer resources for) the persons or events they commemorate. Or it may be due to the independent diligence of a bibliographer who contributed the work to the unit.

Park website-based bibliographical resources, too, are largely selective and very limited. They also may not be specially prepared works, having been borrowed from resource and management documents, which in turn are not meant to be bibliographically comprehensive.

As noted above, only the *Greater Yellowstone Bibliography (GYB)* online was truly comparable to THE GRAND CANON, at least in numbers of citations and breadth of coverage. The *GYB* was, however, not sponsored by either Yellowstone National Park or its cooperating association; it was available only online with no earlier printed editions, and it did not have an alternate digital layout that could serve as a printed publication (like THE GRAND CANON here). The two online resources (*A Bibliography of the Grand Canyon and Lower Colorado River* and *GYB*) also returned search results in very different manners.

THE GRAND CANON thus is a unique, utilitarian research tool for users like historians, scientists, and biographers, even other bibliographers. It also serves resource managers and administrators of land-oversight agencies and other administrative entities who have oversight of units that lie within the geographic bounds of the greater Grand Canyon region and the lower Colorado River. The managers and administrators of other, affiliate agencies like those for waters and airspaces likewise will find THE GRAND CANON a source of documentary information.

In all, THE GRAND CANON documents past activities conducted within these geographic and administrative areas. It is the evidentiary record of human perspectives and civil uses of the resources there, and of official activities relating to the administration of those resources. It embraces pragmatism and philosophy alike, through widely different approaches—the views and avocations of domestic and foreign travelers; the concerns of civic organizations, citizen action groups, educational institutions and corporate entities; and the duties of branches of government and official agencies.

The earlier printed <u>editions</u> of THE GRAND CANON (as *Bibliography of the Grand Canyon and the Lower Colorado River*, 1981, 1990, and 1993) are greatly outdated, but the 1990 second edition is still serviceable because it includes introductory essays for each thematic part of the bibliography. The online edition (first posted 2000) was significantly revised but after mid-2015 experienced issues that foretold its technological life was short; and it was discontinued in October 2021. THE GRAND CANON, in its digitally word-processed format (here, in PDF), contains the same bibliographical content, far more updated and cleaner in presentation, but, unlike its online database predecessor, with the familiar layout of a traditional bibliography. THE GRAND CANON is, further, modernized and made more useful with internally placed digital hyperlinks.

"A necessary nuisance"—
The Traditional Bibliography in a Digital Age

How Many Voices Unheard? The Choir of Gray Literature in Bibliography

with examples from THE GRAND CANON

### COMMENTARY

# "A necessary nuisance"— The Traditional Bibliography in a Digital Age

by Earle E. Spamer

WHEN ELLIOTT COUES died it was the closing time of an era of scholarship when some practitioners seemed to know everything. Coues (pronounced *cows*) was one of these scholars whose experiences and capabilities crossed into a number of widely different subject areas. He is best known for his prodigious works on American ornithology, but his studies went much further, including original research in natural history and medicine, editing critical editions of Western American exploration, and compiling bibliographies; even essays on spiritualism. Among his indefatigable labors that have been lost is a three thousand-page manuscript on the birds of Arizona, which he temperamentally tossed purposely into the fire.¹ Much of his professional career as a physician with the U.S. Army found him stationed far away from the best (or sometimes any) libraries. To have accomplished so much by himself, even though he was constantly in touch with many correspondents wherever he was, is astonishing. His bibliographical work is of such

For a complete biography on Coues, see Paul Russell Cutright and Michael J. Brodhead, *Elliott Coues: Naturalist and Frontier Historian* (University of Illinois Press, 1981), 509 pp.

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

volume that it alone could have been a lifetime's work; and this was conducted, one must remember, without the benefit of modern digital resources either as sources or for preparing manuscripts.

The art of bibliography has been viewed, particularly in the later part of the 20th century and on to today, as an indulgence of those with special interests and for limited audiences, perhaps even a pastime of puzzling or suspect worth. Used by few, most publishers today see bibliographies as uneconomical. And indeed, why bother with jotting down the authors, titles, and publishers of things that may already be awaiting online? Why bother preparing a publication that will be out of date even before the printed pages are bound? It is a dramatic shift of opinion from a century earlier, when bibliographies were reference tools expected to be found—and used. Substantial tomes, some of them as multiple volumes, were issued by publishers worldwide; awaited for, purchased, cataloged, and worn out by librarians and researchers.

Yet even in Coues' day the process of bibliography bore the stigma that it is not scholarship, at least not in the sense that it contributes new insights to a given field of study. Perhaps; because a bibliography is not usually a product that provides new interpretations or criticism of historical works and scientific hypotheses. Only the truly comprehensive bibliography of a broadly recognized field of scholarship (Americana, for example), when it contains authoritatively critical commentary on the items it cites, may provide contextual contributions toward understanding in its field. The various editions of Henry R. Wagner and Charles L. Camp's *The Plains and the Rockies* are a fine example, to single out but one title.<sup>2</sup>

Few users "read" a bibliography; it is a reference work, used piecemeal like a dictionary or like a thematic concordance.<sup>3</sup> Sometimes it is a biographical aid about a certain author, or it is a bookseller's or collector's key to an author's works. These are its immediate uses; yet, what often is unrecognized in a ponderous list of published works is that it can harbor much of utilitarian value.

At its usual and most basic, a bibliography embraces a chronological and literary history, a guide to tangible objects that are stored somewhere and, there, they are available for use. Each item can be a point for source material, or many items may be a foundation for evaluation, annotation, and enhancement by researchers. If one takes the time to read through portions of a comprehensive bibliography, it brings attention to what has already been done (as expected) but it can also reveal to those who are knowledgeable in the

The last edition is Henry R. Wagner and Charles L. Camp, *The Plains and the Rockies : A Critical Bibliography of Exploration, Adventure and Travel in the American West, 1800-1865*, revised and enlarged by Robert H. Becker (John Howell—Books, San Francisco, 4th ed., 1982), 745 pp.

<sup>&</sup>lt;sup>3</sup> But see also my remarks in the <u>Preamble</u> for this volume.

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

subject problems and areas of neglected work. A thorough reading is also surely bound to draw one's attention to many surprising, peculiar, even important items that may otherwise go unnoticed even by diligently precise researchers. And, as a caveat that bears repetition, one which is empirically proved, the work on a bibliography is never done, even when one thinks little more can be done. A bibliography, updated, emended and corrected, always bears fruit.

Indeed, how *does* one "read" a bibliography? Not so much as one would read a story, accumulating the thoughts of paragraph after paragraph. Instead, it is read as paragraphs (citations) by themselves, each to be dismissed or acknowledged as useful or interesting, yet as with conventional reading with some anticipation for what may come. All the while, one does begin to grasp the idea that there is a lot of information that is beyond the simple list of authors, dates, and publishers.

I argue that specialized and truly comprehensive research perspectives can be gained, and administrative needs met, by using bibliographies that are, or claim to be, comprehensive. These are the works that have been assembled by thoughtful evaluation, essentially by hand; they are not shopped out from queries run in existing databases whose construction and content may not be fully suited to the work being done. There are, sadly, many examples of computer-generated reference lists from the third and fourth quarters of the 20th century; often they were unaesthetically reproduced in facsimile, having been generated by what were called line printers.

One may suppose, correctly, that in earlier times the frequent users of bibliographies understood how such works could be mined for information beyond the simple listing of things that had been published. I, however, infer from having worked with newer scholars that this kind of resource is becoming forgotten knowledge; some of these researchers were unaware of the diversity (even the presence) of extensively detailed bibliographies and how such works record the progress of and access to scholarship in the pre-digital world. This is unkind as a generalization; there are many researchers who do not fall into it, but it is an empirical observation I have made of others.

If more of the traditionally published (paper) bibliographies from years past were digitized, perhaps the awareness of such tools would be less overlooked today, perhaps even less shunned as research tools. However, many of these bibliographies have escaped the major efforts of digitization, likely because of their obscurity or, for some, that they remain under copyright. It's probable, too, that some of them are not digitized because it does not seem worth the effort; there is a perception of their limited, antique kind of usefulness, not to mention dated content. A kind of emphasis against bibliographies may be imposed as well by modern publishers, who see in bibliographies only whispers of market share. But in the end, it is a user-dominant perception of bibliographies that occludes them;

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

they provide low returns to scholastic or administrative needs. Hand-conducted searches such as those that would be done with conventional bibliographies takes time when the resource is dauntingly large, a prospect that is not always in the immediate best interest of hurried researchers and, in particular, administrators who work with deadlines in fiduciary straits. Still, these resources exist; and they *can* be used to greater effect than for which they are given credit.

The power that can drive re-recognition of bibliographies can come from the very medium that threatens them to begin with: developments in (what today is called) artificial intelligence. There is coming a time, which already has begun to appear, when computers will have the ability to analyze what the user *expects* to find for application to the work at hand. The major advance in this area will be when they do not err with obvious mistakes or by finding glaringly unrelated items; a demanding expectation from our viewpoint today. And a digital resource's own responses (in some fashion we can only wish for today) will have to be able to *contextually* retrieve or flag material that the user may not have known will be useful. We are not yet there, despite the promises and implementations of interpretive software such as that utilized by commercial developers like Google (to use one example<sup>4</sup>). Yet who even a generation ago could have anticipated the things we use today? The abilities I envision are likely to come, and they could well toll the death bell for bibliographies. In the meantime (and for quite a while yet), we have a world filled with available resources, paper and digital alike, and to overlook the power of one over the other is an unfortunate tendency. Encouraging them to work together will improve the utility of future resources for researchers.

Notwithstanding its potential as the foundation of future ambitious projects, the comprehensive bibliography is—and should be promoted as—the documentation for everything that has been published (and thus available) within the constraints of its scope and content. It is further an administrative account, documenting activities as revealed through publications produced in the execution of official duties, and documenting the conduct of those who carried out that work.

But—this is important—students new to a field of work should see that a pertinent bibliography is a guide to previous research, opinion, criticism and commentary; a body of literature that expresses the development of themes that pertain to the subject; and a chronology of changing research focuses over time. The astute student may also seize from

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

a bibliography ideas of things that are problematical and discern things that seem not to have been done or have not been adequately explored—prime focuses for theses, dissertations, and future professional research for them and for their students in turn.

MOST RESEARCH MATERIALS today still are produced in paper formats and, pragmatically, will remain so for a long time to come. Digital materials now add to the volume of available research material, but despite some that have widespread use and attention they pale against the total that is not digital. The digital forms may someday, probably, dominate libraries; but will they represent the greater part of the whole of all available literature?

The present-day Google Books effort, for example, is both laudable and becoming indispensable, especially for materials that are now in the public domain. There are other such projects, each with specific focus, but the Google project is encouragingly broad in scope and incredibly productive. Many obscure titles and source materials come to light because of its search functions; this much is obvious. It is a very powerful tool for analyzing cultural trends, even thought it is restricted to the relatively "few" millions of items already digitized. Yet, Google Books is not without its recognized flaws; for example, misaligned pages lacking parts of their content, pages warped, miscentered and unreadable due to the operator's mishandling, pages obscured by the operator's hand, the procedural omission of fold-out pages and other things that deviate from the single-page format, and discordant, even useless, publication titles miscited in the Google Books metadata. Utilitarian goals have superseded craftsmanship. Furthermore, anything that fails to replicate the original publication may force one to search for an original copy of the work anyway, which is counterintuitive to the conservational intentions of digitization.

One may envision a day when book scanning is accomplished in the same fashion as, for example, non-invasive three-dimensional investigations inside the human body, like Magnetic Resonance Imaging. The idea is every bit as preposterous as the idea of MRIs would have been to our grandparents when they were young adults, or for that matter, X-rays to our generations of greater-grandparents. The medium is different, and thus the methods will differ from imaging organic bodies, but suppose the technology can be invented, just as were X-ray and MRI machines. These inventions would view the three dimensions of pages, compensating for thickness, warping and crenulations; the layers of formed lines of ink also in three dimensions, in one direction on one side of a page and vice versa, detecting the differences between impressed print blocks and effectively flat-surfaced offset printing; and detecting the chemical qualities of colors of those inks, while distinguishing drawings from half-tone illustrations and lithographs——and so on! The brute processing power, too, may have to await the next generations of what we still quaintly refer to as "computing" technology; for example, the foretelling promises of

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

"quantum computing". Taken a step further from the printed page, we may envision scanning the most fragile of scrolls, never unrolled, imaged and digitally (mathematically) "flattened". But these are accomplishments for the future. Right now we work in a research and reference world partly digital and, a page at a time, still mostly paper. The guides and aids are ever-increasingly digital, and all the processes and materials will move more toward it.

By and large, in major research libraries digital formats are not *replacing* that which is already available in paper. Resources published in inkprint remain a principal research tool, copies of which are usually obtainable in several or many locations. In judiciously maintained collections, the originals of those items that have been digitized will be kept in addition to the accessible digital copy. Regretfully, some libraries must respond to the limitations of finance and physical storage space by retreating from the conveniences of shelf access, banishing "less used" holdings to remote storage locations or disposing(!) them. The general philosophy is that such material is a burden to maintain and is also "available elsewhere". That presumption holds that *other* institutions *will* gladly carry the burden. It is a fatalistic approach that raises roadblocks along researchers' paths. How nonor inconvenienced-access affects the research routines of scholars is so far as I know not well studied; and whereas the determined researcher will one way or another find what is needed, how many will not have the financial, temporal or temperamental resources to pursue some items, then proceed without them? Productivity and scholarship thus suffer.

For the time being, there *is* a good chance that everything that is cited in a bibliography of published materials will be accessible somewhere. One may correctly surmise that digitization is improving access to some materials, even from the comforts of one's home or office. But what of material that is uniquely digital, like the nebula of webposted materials? The web material may be instantaneously accessible now, but there lingers uncertainty whether, citations or not, web-based resources will be accessible at *any* time in the future. If, say, a citation for a publication printed in 1900 is discovered in 2150, there is a reasonable expectation that a copy of that work will be found somewhere; not so with web-based products, which may be gone tomorrow, in five years, or any time, at the blink of an eye. So-called "archives" of past websites are useful but they are limited by noncomprehensive selection, inoperative hyperlinks to material that is no longer attached, and the technological liabilities of the very medium they strive to archive. Moreover, web archives are endangered by the very fact that they themselves also remain—ephemerally—in the web environment.

Web resources can absolutely disappear—every "copy" as it were—at the whims of website compilers who take away posted documents; website managers and tinkerers who change the electronic location of documents, moving, adding, revising, and disposing at

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

will; and website hosts who may move to new internet locations, rename themselves, or close down. In every case the loss of replicable access points, or the outright loss of material, is an electrifying travesty; so much so that many people probably cannot fathom the ramifications should major portions (or the whole of!) the web collapse. Paper, for the long foreseeable future, will continue to serve as a hedge against loss of information.

A web-link citation with no actual linked material relocatable, accessible, *or* surviving is pointless; like the call-number of a library book irretrievable or with no copies extant. We might be fortunate, in such instances, to discover that this kind of "light gray literature" had been captured here and there, digitally or as hardcopy printouts in other locations and collections.<sup>5</sup> But discovering these uncharted islands in the vast archipelago of personal and institutional collections may be only serendipitous; certainly not assured. And further, such survivors may represent only a fraction of the original set of documents or web pages.

The dramatic drive toward routine computerization that took place in the later part of the 20th century limned a constellation of large digital bibliographical databases. Researchers now may find in a digital search individual items that meet certain selected parameters. The selection of parameters is partly that of the inquirer in structuring the query, but it also relies on the catalogers who, as they always have even in the days of card files, have made selective and professional assumptions as to the pertinent subject and content of a work—this to allow researchers to locate "all" works applicable to their present tasks even though the method does not anticipate those researchers who have specialized or unusual focuses.

The digital databases are only as good as they are designed, of course, but there are many good and well-used ones in fields of study from medicine to ecology to sociology, and so on. There are, too, the master files of library holdings like OCLC and WorldCat, or the profound but still-limited Google Books content-searchable digitization effort, although all are restricted to those institutions and organizations who participate. Then, too, there are the online catalogues for individual libraries. Or, we may turn to numerous commercial content-indexing services, some of which have been adopted by academic libraries, like JSTOR or EBSCO MegaFILE. We are thus subservient to the whims of catalogers, whose professionally directed assumptions establish the subject content of an item and thus the retrievable citations from an individual subject query. Likewise, one is also at the mercy of authors and editors, who may not craft informative titles and subtitles. One may wonder after a digital query has been made, what has been missed in the returns?

Earle E. Spamer, "What a Woven Web: Archives, Websites, and the Coming Legacy of "Light Gray Literature", Provenance, Vol. 20 (2002) [2004], pp. 59-71 (https://digitalcommons.kennesaw.edu/provenance/vol20/iss1/8/; last accessed 15 November 2024).

### "A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

Fortunately, the whole-volume digitization efforts now available online are a marvelous means of finding key words or "strings" of words within publications, right to the page. This steps by the functional purpose of a bibliography, yet at the same time it does not allow for the grouping of works such as that provided by bibliographies. Right-to-the-page searches are a different sort of tool; they do not replace bibliographies. But the full-volume digital products have their own issues, not the least of which is faulty optical-character indexing, which is a technological issue that can be improved.

One of the perplexing problems of regular digital querying is receiving spurious citations that have nothing to do with what is expected, even though the structured query does correctly hit upon homonymical words or strings. As cases in point, a search for "Grand Cañon"—hence also "Grand Canon", a common typographical permutation used in the late 19th and early 20th centuries—will yield citations about:

- 1) ecclesiastical commentary (as in grand canons of scripture that include lists of authoritative works, which one may see simplistically as "rules" of faith or conduct)
- 2) clerical grand canons (canons being a body of clerics who live according to rules and are self-ruled amongst themselves)
- 3) canonical affairs generally (as in references to something being a "grand canon" or [again] "rule" for some aspect of human conduct; for example, the "grand canon of writing" or a "grand canon of law")
- 4) the history of artillery (*grand canon*, "large cannon" in French<sup>6</sup>)
- 5) music ("grand canon" being a definitive set of musical pieces)
- 6) mathematics (a "grand canonical ensemble" is a representation of thermodynamic states in statistical mechanics)
- 7) typography ("grand canon" being a style of large point size, one not precisely defined, also known as "double canon"; examples have been noted at 44 and 48 points)<sup>7</sup>

When in French literature the term is capitalized "Grand Canon", in pertinent contexts it is a direct translation of "Big Cañon" in English, a former name for the Grand Canyon of the Colorado River. It is thus most usually in reference to published reports from the J. C. Ives expedition of 1858, which described and portrayed "Big Cañon". There is, too, published account of the Place au Grand Canon in Ghent, Belgium, the location of an "enormous cannon" named *De dulle Griete*, or Mad Margery, manufactured in 1452 (John Murray, *A Handbook for Travellers in Holland and Belgium*, John Murray, London, 19th ed., 1876, p. 135).

One can be misled, too. For example, the round-the-world memoir by Le Comte de Beauvoir (Ludovic Hébert, the marquis de Beauvoir), *Pékin, Yeddo[,] San Francisco : voyage autour du monde* (Henri Plon, Paris, 1872 and numerous reprintings and editions), makes reference to "le canon du *Colorado"* followed by several passages replete with exclamation marks (pp. 265-266). One could mistake this, without reading (or understanding) the whole, for a visit to Grand Canyon, which of course it cannot be since it is in a passage dated from May 19, 1867. The reference is actually to the firing of the cannon of the ship *Colorado* upon leaving port in Japan. Thus, blind searches do not necessarily lead to proper references to Grand Canyon as "Grand Canon".

<sup>&</sup>lt;sup>7</sup> See also for example, Linotype Sabon Next. Part 1. Roots and Design Processes (Linotype Library GmbH, Bad

### "A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

- 8) references to "Le Grand Canon", misspelling of the Civil War memoirist, Le Grand Cannon [Le Grand Bouton Cannon] or the 20th century novelist Le Grand Cannon (and possibly others with this name)<sup>8</sup>
- 9) references to physiographic features named "Grand Cañon" that are not the familiar "Grand Canyon" <sup>9</sup>
- 10) generic terms of a physiographic feature as "a grand cañon" or "a grand canon".

Discerning which among all these finds is pertinent to a task at hand is up to the user; no software can do that for them without some direction from the user.

Still, the preponderant usefulness—and precision—in these master databases is a wonderful resource. They would be missed if they did not exist. Yet they did not exist a couple of generations ago. All that were available then were printed, eye-searchable bibliographies, only occasionally indexed or annotated, and, of course, ubiquitous card catalogs—each a Version 1.0 of its digital descendants.

IF ANYTHING (within reason) can be discovered quickly in a lightning storm of digitally cataloged publications, why in the world should anyone fall back on a broadly focused bibliography that laboriously and slowly plots decades or centuries of publications in a serialized, print-like format, one plodding, discrete item at a time?

The use of conventional, inkprint bibliographies is contrary to the instant matters-at-hand ethos that has assimilated an "online", "wireless" generation. The big picture may be superfluous, and from such a view a bibliography may invoke ideas of wearying overextension, or at its cuttingest, quaint irrelevance. Yet the reason a comprehensive bibliography can still stand firm in spite of its asynchrony with sped-up modern research methods is that its compilation authoritatively audits observations and work produced within the subject it embraces. It is the evidentiary record, visible as a whole, of the work of individuals, agencies, and organizations. It is responsive, even if slowly, to unique lines of inquiry or to administrative needs that cannot rely on presupposed, standardized categories of indexing nor solely upon structured queries (the rigor of and results from which may and do vary).

It is the *content* of a bibliography that brings its attention to users, less so the composition of its citations. While many bibliographies are compilations of books only,

Homberg, 2002), p. 11.

Note must be made also of one Le Grand Canon Griswold, a member of the Class of 1903 at Princeton University. (*Directory of Living Alumni of Princeton University*, Princeton, 1911, p. 137.)

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

others may compile magazine articles (perhaps just from the 19th century, for example). The permutations are numerous, each utilitarian within its scope and intended audience. Rarer are those bibliographies that canvas multiple source types (books, magazines, pamphlets, etc.) or multiple media types (printed, audio, audio-visual, etc.) or are temporally comprehensive, spanning centuries. The modern digital databases are similarly focused; they have selective content depending upon their intended coverage and audience. The most attractive aspect of the digital forms is that they are broadly accessible and take up no shelf space, though they are susceptible to digital decay and non-migration to revised software and updated hardware. But most weakly, the digital *databases*, unlike traditional bibliographies, do not lend themselves to browsing.

Traditional print bibliographies can be concisely packaged or cumbersome, even unwieldy in multiple volumes. They can be complex in ways that some questions asked of them can be answered only by flipping back and forth in the volume, or between volumes, fingers, papers, or scribbled notes holding places. While some users find this kind of basic research fascinating and productive, others find it arduously counterproductive, thus they rely more on searchable digitized bibliographies or databases. But it depends upon how fine a focus the user has on the project that is in progress, and how deeply into time that project delves. Many older bibliographies are not digitized, and the large electronic databases may be selective in the time range they cover. Many good and surprisingly useful resources just are not yet available digitally; and perhaps they never will be.

The kinds of pertinent information sources—citations, in the parlance of bibliographies—that catch a researcher's attention cannot be assembled (yet) by a computer program that responds to a structured query. The broad palate of raw data is understood only by the researcher; it is not delivered in an individual citation or structured group of queries. With the raw data the researcher is informed of sources that will deductively contribute to, argue against, or ratify hypotheses and opinions, or occasionally will even alter long-standing axioms in a field of study. The broad palate contributes toward the construction of arguments and helps draw up the support used for critical commentaries and unique conclusions.

To use digital databases to compile sets of data for supporting arguments, or for making meaningful evaluations of scholarly questions, requires a prodigious amount of data-gathering. For example, Stephen J. Pyne in *How the Canyon Became Grand* <sup>10</sup> used the 1990 print edition of Earle Spamer's *Bibliography of the Grand Canyon and the Lower Colorado River* <sup>11</sup> to collate statistics about the kinds of publications that had been

<sup>&</sup>lt;sup>10</sup> Stephen J. Pyne, How the Canyon Became Grand: A Short History, (Viking, New York, 1998), 199 pp.

Earle E. Spamer, Bibliography of the Grand Canyon and the Lower Colorado River: From 1540, *Grand Canyon Natural History Association Monograph 8* (1990), and supplement, 1993. This is the last print edition of this bibliography.

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

produced during the previous century and a half. Lacking a database format at that time, the bibliographical information Pyne sought was tallied by eye and hand, somehow an appropriately traditional use of the bibliography in a time which even then was rapidly embracing digital formats.

This brings up an important point, one which takes the step beyond usual bounds of academic curiosity, stepping toward pragmatic inquiry. Perhaps those who demand the most information, but in discrete packets, are administrators, of whom one may never predict what will be needed or how a question will be framed. In the case of a national park, for example, a resource manager there might at one time need to account for every bit of publicly reported entomological research conducted in the park and the adjacent federal forest lands, but only since the creation of the national park. At another time, a query may be had about published discussions of the park's sewerage facilities and water recycling. Polling library and special-serials databases might provide some answers quickly, but there are many catalogued citations that will overlook a component contained in a larger, unrelated work because it is not a cataloger's duty to relate the detailed content of a work.

Two further points are that some works never have been catalogued into the modern databases, and no bibliography is a "master index" to *everything* contained in the publications it cites. A comprehensive bibliography can, however, pay its dues in a farreaching administrative sense by revealing more than may be available anywhere else. True, it may not be the administrator who does the work, but the data delivered will be used to administrative effect. And in the objective sense of administration, the worst thing for any administrator is to be not informed.

If a researcher will wile the time to peruse a large bibliography just once, they will find works that would have been overlooked by a database query. There also are adjunct references that may not be directly related to the inquiry but which will have some ancillary application to research then underway—and, if not to the research then in progress, then serendipitously to another task the inquirer is working on or contemplating, perhaps even to inspire a whole new project. These are things that will not be delivered by querying databases. Only a *user* has the knowledge to recognize the things that do not fit a predetermined, pre-analyzed set of criteria. And by critically reviewing an entire bibliography, assuming it is reliable within its stated scope, a researcher will have the comfortable assurance that a substantial portion of the work previously done will have come to his or her attention.<sup>12</sup>

<sup>&</sup>lt;sup>12</sup>To illustrate how a database search compares to a reading of the same page in a monographic format, consider the kinds of returns one would get from a query about the short story, "El Gran Cañon", by the Dutch writer F. C. Terborgh (a pseudonym of Reijnier Flaes), which pertains to a Spanish expedition to the Grand Canyon in

#### "A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

It is similar in scientific or historical research. Only the researcher has the expertise to recognize the things that are useful for the study at hand. Running a database query will return far different results than a more laborious, time-consuming "read" of a bibliography. This is nowhere more important than to the student who is new to a field; there is no other place that will provide, in one source, a view of all that which has been already done—and I do not refer to a "selective" view of the "most important" things even though such overviews are themselves important and useful. I am quite at a loss as how to advertise the benefits of a comprehensive survey in lieu of the snap-of-the-digital-fingers return of an answer that, outwardly, seems to be comprehensively satisfying by itself. From resources that claim to include "everything", a user will gain a better perspective of the range of what Benjamin Franklin called the "useful" and the "ornamental" 13; or more pointedly, the

"1527". The story is unmistakably, loosely based upon Francisco Vazquez de Coronado's *entrada* in search of the Seven Cities of Cíbola and Pedro de Castañeda's account of the visit to Grand Canyon in 1540. If one's citation in hand referred to the English translation that appeared in the 1945 compendium of Dutch writing, *Harvest of the Lowlands*, one would retrieve from a database only:

### **Terborgh, F. C.** [pseudonym] [Flaes, Reijnier]

7.994 El Gran Cañon. (Jo Mayo, translator.) *In:* Greshoff, Jan (compiler, ed.), *Harvest of the Lowlands : an anthology in English translation of creative writing in the Dutch language with a historical survey of the literary development.* New York: Querido, Inc., pp. 478-489. [Translated from Terborgh; source text not identified. This is an imaginative retelling of some events of the Coronado *entrada*, although much smaller, starting in 1527, and never heard from again. The encounter with Grand Canyon is on pp. 487-489, which includes a party's descent into the canyon in order to follow the river to the sea.]

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

"treasures and trash" as librarian Louise Hinchliffe more judiciously viewed the coverage in a comprehensive bibliography. 14

Which brings us back to Elliott Coues. His bibliographical work is all the more remarkable when we realize that he reached this level of achievement at a time when things were done by hand. I am now in my fifth decade of bibliographical work, compiling, editing, and formatting editions both printed and digital. I understand the time it takes to do these things even with the help of computers now; and looking at Coues' productions I am impressed. Even in 1886 he was intending to compile a "universal bibliography" for ornithology—"from Aristotle" no less! 15—and although he accomplished a master North American ornithological bibliography of tens of thousands of items, 16 and embarked on one for other world locales, he quit, finally, when confronted by the realities of the volume of material and the limitations and distractions of life. Imagine his perspective of things were he to forecast the literary tsunami of the 20th century.

Collating and arranging references is mundane work, certainly, sometimes augmented by interpretive commentary that provides more exercise for the mind. Only one who is intrigued by the printed word, by the rewards of reassembling information, and delving deeply for treasures in existing resources finds it interesting. But none of it is done mechanically; it still does take a person to make evaluations of material to be added, skipped, elaborated, revised, reverified, corrected or otherwise corroborated or emended for the bibliography. A single citation that appears in a bibliography is not always a simple recitation, quickly assembled before moving to the next "find"; each reflects its part in a cycle of acquisition and evaluation. Sometimes batches of citations are discovered at once, conveniently herded together and ready for classification; and other times specific in-depth searches will yield but few items (or one, or none!) in a long trawl.

Coues, in 1897, admitted for himself, and probably for all bibliographers, that "It takes a sort of an inspired idiot to make a good bibliographer . . . ." <sup>17</sup> He called bibliography "a necessary nuisance, and a horrible drudgery that no mere drudge [can] perform". He likened the drive to do it to "the appetite of a gambler or dipsomaniac". I agree, but I add, for myself and for Coues, that there is a separate, eager force that comes with "infatuation",

Louise M. Hinchliffe, Foreword *in* Earle E. Spamer (compiler), Bibliography of the Grand Canyon and the Lower Colorado River: From 1540, *Grand Canyon Natural History Association, Monograph 8* (1990), pp. v-vi.

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

which ameliorates drudgery and tedium. Perhaps infatuation is a kindlier form of inspired idiocy.

Years earlier, in 1874, Coues had already discerned the modern purpose for bibliography, one that sees scholarship challenged by utility. <sup>18</sup> He explained, "The labor of such compilation does not appear on the surface, [which I mention only] in the sincere hope that, once accomplished, the weary drudgery of future workers in the same vein may be materially lightened." In this statement, too, may be read that the reward in bibliography is usefulness to persons and in times not known to the compiler. On the other hand, the statement flies in the face of a remark made a generation earlier by the preeminent cataloger (and in fact a bibliography can be seen as a catalog), Charles A. Cutter, who said that "The cataloguer should not expect to be satisfied with his work" <sup>19</sup>, meaning that continued revisions may not lighten the work of others as surely as Coues supposed it could.

Elliott Coues would certainly have embraced the computer as a savior to a bibliographer's work of collation and editing. In Coues' day the routine work of compilation led predictably to drawers full and stacks of index cards and papers, to lengthy pages of drudged, uniform citations not meant for fireside reading; which when done up in printed form became rather a nuisance to use. At least in printed form they were readily accessible nuisances. Today, the routine work of identification, evaluation, and compilation still has to be done even for the digital databases. But now, the ways in which value-added products can be derived from the main body of bibliographical data significantly amplify the usefulness of digital forums, although often at the expense of limiting or wholly occluding the ability to perceive and browse the whole.

When my compilation of the *Bibliography of the Grand Canyon and the Lower Colorado River* was first published in 1981<sup>20</sup>, I never gave a computerized version a thought. In fact, various draft and final lists well into the 1980s all were rolled through typewriters. I was, incidentally, about to embark at that time into a part of my career where I wrote (on typewriters) technical reports about computers. Computers then were mostly batch-oriented mainframes, impractical to load up with millions of bytes of data just to sit and wait; most data were typed first onto punch cards or paper tape and read as needed

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

into the computer's memory to be processed by programs loaded into it just for the job. Interactive terminals, which were yet new, were pokey contraptions with awful keyboards that had stiff, rackety keys; across murky, usually green-phosphor "CRT" (cathode-ray tube) screens data returned from the "core" of the computer, noticeably character by character, with dot-matrix resolution that one could easily see on the screen. No one had one of these things at home. And what became the internet was embryonic, the limited domain of military consortia and hard-wired academics shuttling bytes and words, not graphics; it was still unknown to the world at large. Besides, computers of the day were meant for "data processing", which effectively meant "number-crunching" or delimitedfield arrangements of text. Relatively crude compilations of bibliographical data could be, and were being, compiled through the assembly of boxes of punch cards or reels of digitally formatted tape, but these in the end resulted in more pages of paper documentation, awkwardly printed on aesthetically unpleasing computer printouts. And simply unheard of were digitally composed pages—except those like that of Quadex, a proprietary computerized system, inside the large, floor-sitting boxes of which individual characters on fiche-like cards were strobe-flashed perfectly, in synchronized computer-instructed arrangements, through lenses (determing type size) onto rolls of photographic paper, which, after chemical development and physically cutting and pasting them into page layouts, were used as camera-ready copy for offset printing.<sup>21</sup>

I admit that it is difficult for me to rely on something other than five centuries of book production technology and the distinctly diverse ways in which books have been distributed and used. The ephemeral nature of the internet can be scary to a paper-dependent person, despite unspecific promises of a world of data—notably not "the world's data"—at one's fingertips. An online or otherwise digital bibliography can further allow for a continuously updated format, unencumbered by the methodological "edition" of traditional publication with its physical constraints, expense, and distributional needs of printing, warehousing, and shipping. In that fashion, looking ahead such a bibliography can be reused and improved in ways we probably cannot imagine now. It may well turn out, too, that bibliographies *in general* are only an indulgence of research methods that will no longer apply in the 21st century and after. And bibliographies succumb to human limitations. Coues himself abandoned the work of bibliography, "forcibly divorced", he said, from a mania with which he could no longer keep pace. <sup>22</sup> But he gave up because of the volume of material, not because the technology had changed. I, however, have experienced a forced divorce due to technology: the digital database edition of the Grand Canyon–Lower

Quadex has long since been absorbed and reabsorbed in corporate sales and mergers. I used this phenomenally innovative system, now a clumsy antique, in the early '80s while employed by a commercial publisher of computer technology reports.

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

Colorado River bibliography, posted online in January 2000, was by 2015 unable to continue its updates, and it was finally removed from the web in October 2021.

I wonder how infrequently are Elliott Coues' bibliographies referred to today, whether in paper format or through one or another of the massive digitization projects online. His bibliographies are outdated by the passage of time, but I think a more accurate term is "outpaced", as Coues himself admitted had happened. Regardless, they still are reliable for the time periods they embrace, and they are accessible to those who need them.

Even though every good intention may be held to make a bibliography comprehensive (if that is its intention), pragmatically it is not. The very nature of bibliography lends itself to incompleteness; there is always more to be found, even within the most conscientious of scholarly and avocational fields where it may be vainly believed that "every work" has been found. The fact that multiple editions of a bibliography are published, each of which include many citations that should have been found for earlier editions (and not just newer works acquired since the last edition), testifies that the obscurity of references is due both to the diverse and broadly scattered material that must be found, often serendipitously, and to the growth of and improvements to the bibliographer's methods and resources. The passage of time naturally adds new works as well as allowing a compiler to rediscover old works previously overlooked. And it allows new technologies (like the internet) to overtake the compiler, which reveals all the more. Those who are the users of bibliographies are, in turn, beneficiaries of this work.

In 1878, Elliott Coues had already confirmed observations that I have made on my own more than a century later. In his ongoing master bibliography of North American ornithology he wrote, "Bibliography is never finished, and always more or less defective, even on ground long gone over . . . . "23 And, speaking of himself, but which the prospective bibliographer can heed, too, he concluded in the third-person, "The writer would [like to] be accurate; yet he feels the weight of Stevens's satire: 'If you are troubled with a pride of accuracy, and would have it taken out of you, print a catalogue.'" It is more broadly a recurring predicament of scholarly publishing, even if hardly ever admitted. Malacologist Henry Pilsbry conceded in 1949, "If you want to learn how much you can overlook or forget, just write a book." 24

Elliott Coues, "Birds of the Colorado Valley: a Repository of Scientific and Popular Information Concerning North American Ornithology. Part First, Passeres to Laniidae, Bibliographical Appendix", U.S. Geological Survey of the Territories, Miscellaneous Publications, no. 11 (1878), 807 pp. [The appendix to this work is Coues' first installment in his American Ornithological Bibliography.]

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

The traditional bibliography *is* still essential in the digital age. By "traditional" I mean comprehensively monographic—all in one place, not parsed into fields to be grabbed piecemeal and never truly comprehending its entirety. Thus grasped, traditional bibliographies offer perspectives that databases do not because the marvelous electronic guides do not offer a view of the whole to the user. Neither do the electronic guides anticipate all perspectives of a researcher's task in the ways that the researcher may have in mind. This may change—so we hope from the work and talk of artificial-intelligence developers—but for now a person's most productive searches are realized in two ways: one from filtered digital responses, the other from the scrutiny of pages with one's own experience, anticipation and capacity in charge.

Services provided by a database are unambiguously focused; its selections depend upon the way in which the user has queried it. It depends, too, upon how the database's creators have fashioned its data fields and the methods by which the data are parsed in response to the user's query. One depends upon the skill of the other to uncover what is useful.

The traditional bibliography, on the other hand, depends foremost upon the skill of its compilers: for its stated subject, is it accurate and useful? In practice, it first reveals at a glance the whole volume of its subject, then it affords its user numerous points of entry that are invisible from a query screen in a digitized database. By identifying sections of the bibliography in which to browse, an indulgent and patient researcher so disposed can uncover qualitatively and subjectively more by paging through it.

With databases we are, regretfully, subservient to the limits of technology. With traditional bibliographies we are obeisant to the physiological and temperamental limitations of the human body and mind; most of all boredom, tedium, and oversight. To be sure, while databases and pages are procedurally at odds, they are for now both indispensable. The dichotomy challenges researchers; administrators, too, who need timely and concise information; and librarians, who provide access and direction to useful resources. Using a digital database gets "a" job done. A slowly used monographic bibliography provides the finer resolution of a subject.

Users who must be time-conscious may view a detailed bibliography as a regretful nuisance, one not useful to the task whether by its sheer volume or by the greater number of "inconsequential" references in it that make it difficult to isolate those that are deemed "important" or "significant". And yet, another user whose very mission is to uncover myriad minor resources—or perhaps an elusive clue—is likely to retrieve them from a careful browsing. The contextual positions that specific or minor items hold can be discerned only by a subjective analysis by the user. Someday, ever more complex search needs will be matched by the resources and techniques of a vastly more precise ("intelligent") digital

"A NECESSARY NUISSANCE"—THE TRADITIONAL BIBLIOGRAPHY IN THE DIGITAL AGE

world. Likewise, researchers' subjectively unique queries may be far more satisfactorily (even serendipitously) answered. In the meantime, we have our usefully, sometimes fumbly, mixed world of bytes, pixels and paper.

Despite concomitant arguments that admonish either conventional or digital resources, the traditional bibliography, whether it is on paper or presented in digital format like PDF, still provides one of the greatest resources available to new students in a field. While it may be deemed to be an awkward, if not antique, kind of resource, at its best it records much which has been published on the subject it embraces. With it one may see how that body of previous work applies to the fields it covers. As a student advances, the traditional bibliographies they may encounter will be seen with broader familiarity and with greater insights gained from the student's growing command of the field. Bibliographies also record contributions and false leads; they may even reexpose and reinvigorate perspectives and arguments that have been forgotten in a historical eddy along the main stream of a field's advancements. In reading the bibliography the student may also discern insufficiencies that draw attention to areas needing more or renewed work.

A bibliography serves all researchers as a documentary and evidentiary tool—this is the principal service that bibliographies have always provided. But further, it may serve as a foundation upon which to build more detailed, modernized, and reliably useful new guides—including new digital databases. No longer perceived as interminable lists of static citations, traditional bibliographies, even those produced years ago, can even serve as platforms on which digitally accessible copies of the cited items may be acquired. This will not just depend upon random, user-structured queries or search strings (such as how users can work with Google Books today, for example), but the bibliography–platform will serve as an authoritative, pre-analyzed, perhaps annotated, list that can deliver copies of the very material cited there, rather than just the citation and the information conveyed by it.

One most essential fact remains even in the digital age: within a traditional bibliography the work of proving sources is already done. It frees its readers to extract from it what is most immediately useful. It allows researchers and information providers to devise and refine value-added products. It affirms for administrators a body of available documentation and prior work. And it may in some cases set benchmarks in the evaluation of specific resources or identify new items of historical significance. Thus a bibliography never will be again a dreary documentation of what-has-been-done, but is the proof for points of historical and administrative interest and a meticulous, mercurial contributor to what can be done next.

# How Many Voices Unheard? The Choir of Gray Literature in Bibliography

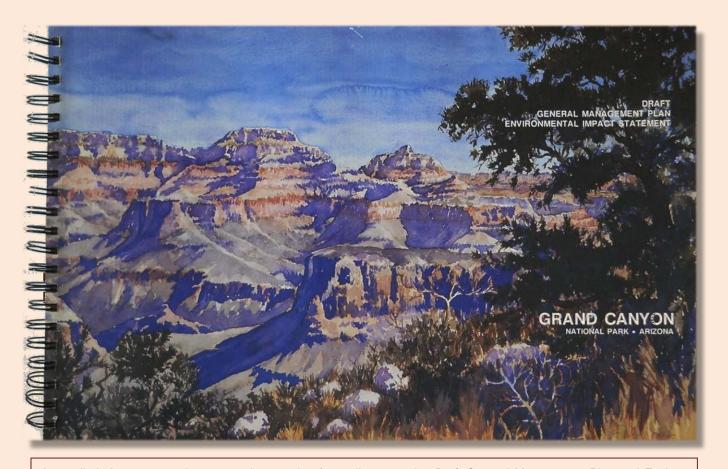

with examples from THE GRAND CANON

by Earle E. Spamer

RESEARCHERS of most every kind eventually meet up with "gray literature", the murky informational nebula of publications that are produced usually for limited distribution, sometimes not intended for longevity, and which seem to be cited and cataloged every which way. It is called "gray" because these documents lie outside of the usual channels of publication and distribution and confound tidy forms of cataloging and citation. Data about authorship, publisher and place of publication may not be clearly shown, at least not like as seen in conventional books and serials; even the title may be ambiguous or confused with another document, even worded differently on the cover and title-sheet. Further, some may be parts of series, and those series names may be used instead if they include separate volume numbers.

Gray literature stands out in some sections of THE GRAND CANON; such is the nature of the subject and the means by which people and agencies communicate their opinions and findings. For this reason this essay is an excursion into the realm of gray literature, partly to relate the hidden importance of this kind of literature and partly to introduce it to those readers who may be unfamiliar with it. Gray literature is a peculiarly interesting form of publication that may not have been encountered by some readers, and for those who are all too familiar with it they may be unaware of the broad professional perspectives of it by an industrious, sometimes bewildered, community of librarians, bibliographers, and researchers.

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

A peculiarly immense, and ornamental, example of gray literature, the *Draft General Management Plan and Environmental Impact Statement* for Grand Canyon National Park, 1995. It contains a number of watercolor paintings (including the cover, *here*) by an artist who is, regretfully, not credited. Whereas some sources may know who this is, the general readership does not. (By analyzing the hasty signature, the artist is here identified as Philip Thys, whose name is listed on p. 317 as a Visual Information Specialist consultant in the National Park Service's Denver Service Center.) In addition to containing original artwork, this document measures 11 x 17 inches (shy of a yard fully opened); all in all a very unsual example of gray literature. The Final plan, printed at a more conventional 8½ x 11 inches, simply presents collated updates and *refers the reader back* to this Draft document, now made indispensable, for specifics; also an unusual aspect.

# **Color-Coding Grayness**

CATALOGING DOCUMENTS may seem to be only an academic exercise, a mundane part of running a library, but it is the means by which a document can be identified and, whenever it is needed, found. The level of detail in cataloging is a function of a library's resources in staff time, expertise and perceived needs in serving its clients; despite professional cataloging standards, it can, and does, vary.

Sometimes years or decades pass before an item is called for—longer times of a century and more are not unheard of—but *a document's usefulness is not best measured in* 

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

its frequency of use but in its availability. This is in stark contrast to the pressing responsibilities of overcrowded libraries that relegate materials rarely called for to "annexed" storage, often under warehouse conditions in a facility physically apart from the library. This material may be "called for" on request; usually a day or more passes. In some academic libraries, these off-site materials may be requested by students and faculty, but guest researchers may not have permission to request these items. Sometimes this kind of material is simply considered to be "on file"; and the "files" are often not easily browsable by a library's users.

Worse, some libraries elect to dispose of less-used materials. While such decisions are pragmatic, still one may never presume what will be of interest or use to a researcher in any place or time—and to fail a researcher's needs is a library's greatest failing. Unfortunately, a lot of gray literature is just the kind of material that wends its way to the annexes, re-sale bins and recycling containers. I prefer a less-used term, "fugitive information", to describe the content of gray literature because it accentuates both the inherent usefulness of the material and the predicament of the gray literature genre; but researchers and librarians are more familiar with the long-standing "gray" label.

Within a library's cataloging schemes it may be a matter of *how* "gray" a document is that determines its projected usefulness to the library's clientele; whether it is accessible immediately, "on request", or not kept. In THE GRAND CANON here, the number of such fugitive citations are particularly apparent in the sections devoted to the environment and geology, so it is the researchers in these areas who will be most attracted to and impacted by the inavailability of gray literature. Whether or not all of these cited documents can be located today is a matter that is, regretfully, the burden of the researcher and the hapless librarian who assists.

Once, the medium was limited by economy, too. Many works were produced by mimeograph; even, as around the turn to the 20th century, by such arcane methods as the Edison Electric Pen process. Today, in addition to its conventional text-on-paper-sheets format, gray literature may appear as slick, professionally produced documents, as often as not in full color—and now in digital formats as well. But the "gray" remains: the creator's intentions for audience and distribution, and the ways in which the document is physically

This term is from a web-posted document by Joanne V. Lerud and Lisa G. Dunn, "Fugitive Information on the World Wide Web: A Cost-Effective Method of Access for a Diverse Clientele", original URL http://educate1.lib.chalmers.se/IATUL/proceedcontents/fullpaper/lerud.html, relocated at http://www.iatul.org/doclibrary/public/Conf\_Proceedings/1997/Dunn.doc (accessed 26 November 2011; reaccessed 9 January 2017). This web page was subsequently removed (attempted access 26 October 2017), offering a good example of the inconvenience to future researchers when web-posted materials have been moved or are no longer accessible. A startling, more pragmatic case of inconvenience is such as that of opinions of the Supreme Court of the United States, which formulate legal precedent and orders, that cite web-based materials that may no longer be accessible (Adam Liptak, "In Supreme Court Opinions, Web Links to Nowhere", New York Times (September 24, 2013), p. A13).

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

composed, continue to shroud the very tidy and conventional things that librarians and researchers look for when they catalog and cite these documents.

A document's size or format never determines whether it is "gray" or not; it may be one or few pages, or multiple volumes; and it may be a blurry mimeographed document or a colorful, professionally printed compendium of information. What makes it "gray" is how such literature is produced, acquired, retained, and retrieved. Some libraries receive these items as a function of maintaining their institution's internally-produced records, or by happenstance or donation, occasionally by purposeful acquisition, paid for or at no cost. Then, different librarians may follow different rules for cataloging the same document, depending upon whether the library follows established practices or its own special schemes. If the library is cataloging a document as "one of its own", produced by the staff or department of an organization or agency that it supports, it may follow different procedures than if the library were cataloging a document received from outside. Some may catalog them for inclusion on the readers' shelves; others may banish them, perhaps not even cataloged, to "reference files" whose only guides are alphabetization or enumeration.

When "gray" documents are cited by researchers or as part of administrative productions, the writers or their editors will follow standarized professional guides or house rules of style for citations; sometimes they will be creative. Citation styles vary greatly between professional journals and publishing houses; some follow one or another of separately published writing guides (for example, the Chicago Manual of Style, which is followed by many publishers and academics, or agency-specific guides like Suggestions to Authors of the Reports of the United States Geological Survey). "Forcing" a gray-literature citation to conform to one style may muddle the information contained on the title page or from other evidence within the document, a disservice to those who follow up on it. Titlepages may display a confusing arrangement of typography, title, subtitle, series name, and other information—not necessarily well arranged—while other times the same breakdown may be displayed on various pages, even the last leaf. Researchers who find citations written in one format may look for, or request through a librarian, one of these documents only to learn it cannot be located, not because the document may not exist in the repository but because the document may have been cataloged differently from the source the researcher has in hand—thus, "not found". One must wonder how much potentially useful gray literature does not find its way into a researcher's work only because a copy of a promising source could not be found.

To cut to the chase: I have followed a simple rule in THE GRAND CANON—I cite the title, author, and responsible parties for documents of gray literature, as precisely as possible from the original, gleaned from a careful examination of more than just the cover sheet (the cover- and title-sheets may differ, or authors' names can appear elsewhere in the

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

document), and following as closely as possible the citation style used in THE GRAND CANON. Special investigatory program or contract numbers are included as notations when they are indicated in the original document. It is then up to the interested researcher to use this *verbatim* information in tandem with the cataloging schemes of libraries or other repositories, perhaps with the assistance of librarians, to establish how *those* repositories may have cataloged and stored the same item.

# **Pulling the Curtain Aside**

GRAY LITERATURE is usually restricted to academic and political venues. In THE GRAND CANON, as we shall see, most of the gray literature appears in the environmental and geological subject areas. There is a very large proponent, too, issued from legislative branches of government, but which (as explained elsewhere in THE GRAND CANON) is probably severely undercited due to the sheer volume of material as yet unlocated; so this specific grouping will be overlooked as examples in this essay although the principles discussed here apply to it.

Furthermore, today's increasing number of general publications that are produced "on demand" follow in the same vein as gray literature. In brief, many of the on-demand publications do not display imprints as such; and as for place of publication certain central printing establishments, such as one in Lexington, Kentucky, produce works for many ondemand publishers wherever those publishers may be located; and there are other locations, too, none of which truly constitute an "imprint". The printer's date in a document—for the identical document—will vary from "demand" to "demand", too. This is becoming a perplexing problem bibliographically. THE GRAND CANON has accommodated some of these on-demand publications when they have been encountered, and the dates are those of the dates of printing, which thus far seem to represent (at least among the citations in THE GRAND CANON) the earliest known occurrences because they have not previously been available as such. As time goes by, however, it will probably be prudent to cite only these earliest known dates regardless of the variations that may appear in the product (different cover illustrations, different pagination, and so forth); but making retrospective surveys may thus be impossible if the earliest dates are unknown. This is a problem that I have not addressed since keeping apace with new appearances of ondemand titles has not been too difficult thus far. We may yet have to discern in this special kind of gray literature a new kind of citation style, but this is a matter for the future.

The "murkiness" of the gray-literature nebula is the view from the perspective of the users of these documents—librarians and researchers. Surviving copies may be scarce to begin with, and they may be cataloged in different ways among libraries that do hold them. The problems of gray literature are neither shunned or glossed over by professionals;

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

international conferences on the problems and issues of gray literature are held from time to time. And as a bibliographer I, too, have had to come to terms with the presence of these kinds of works, benefiting from the experiences of other researchers and librarians with whom I have worked when it comes to citing (and looking for) these productions.

In the late 1990s I wrote an essay (this one, in part) to include with what became the Internet Edition of *A Bibliography of the Grand Canyon and Lower Colorado River* (but since October 2021 no longer available online); but this and other introductory materials that I had hoped to use were not added to the online presence. A decade and a half later, I found that the essay not only still stood well by itself, but it now offered a contrasting perspective of the topics that it addresses.

This views both an embryonic digital world of the 1990s and the present world that functions in a vastly more web-based fashion than it did even then. Many of the example citations were those that were known to me in the '90s; the fact that they are still relevant to the discussion makes it less necessary to force an updating of the essay to embrace "timely" citations from recent work. In reusing some of the text here I further recognize instructive lessons to be learned in the retention of the older citations and the attempts to relocate them a decade and more later.<sup>2</sup> And since the purpose of a bibliography is to record in context everything that has been done, this essay in support of the bibliography is partly historical, reflecting perspectives from a time when digitization and online resources were coming to the fore; partly a retrospective analysis of these views.

So, the greatest frustration addressed in this essay is the demise of accessible links to web-based resources. This comes as no surprise to a researcher, but these examples expose the uselessness of web citations in historiographical work. If one of the foundations of scholarly research is the citation of references, which one then may find for themselves to reassess or to continue on a new road of investigation, how then does one travel these avenues if the work is no longer available? In the examples I cite herein, using a web address (URL—Uniform Resource Locator) from the 1990s originally, I follow through with searches for the same material to illustrate the points that are raised here. In most cases, as one shall see, the information has been relocated; but it should not be the researcher's job

In the footnoted references that follow in this essay I retain the original URLs that were cited in the first draft of the essay, written in the late 1990s. Where URLs were shown in 2011 to be no longer valid, I searched for the same web-posted document or website via an online search; and where updated URLs were located I so indicate them. Of course, there is no assurance that these in turn will remain valid. Websites or documents that could not be relocated are so indicated. [URLs were not generally further updated for the revision of this essay in the 4th Edition of THE GRAND CANON, nor now in the 5th Edition—purposely, to further demonstrate the futility of relying fully on them in the future, at least for that material which has not been made otherwise "permanent" or recaptured in some other format. It is a ridiculous situation: future researchers may be able to re-quote the source of lost documents, but others will not be able to corroborate the information, substantiate its use, or examine the greater whole of the document. —E.E.S., December 2021/November 2024.]

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

to hunt for the material yet again in spite of the useless URL. At best, web citations duplicate effort in the long run.

What, too, does this mean to those who created the work in the first place? And, will any copies, in whole or in part, survive somewhere? These are aspects that relate to what I have called "light gray literature". Specifically, light gray literature comprises materials retrieved from online resources either in digital format or printed to paper, whether they represent the online resource in whole or in part. The medium is inconsequential; rather, the genre embodies a combination of the intentions of the document's creators in posting the materials online, and the intentions of those who saved copies of that material in whole or in part. At the time of their acquisition (for whatever reason) these materials may be a researcher's "Fair Use" reference copies, which clearly are available elsewhere. But in the future, this same material in one collection may then represent the sole surving relics, in whole or in part, of digital material that is no longer extant. The challenge to an archivist or librarian of that day will be to ascertain whether it is material that is still accessible elsewhere, presumably in a copyright-protected venue, or whether it is then a unique or exceedingly scarce resource worthy of retention with restrictions if copyright provisions are still in force. Eventually, all such material will fall into the public domain, which is reason enough to safeguard it should it be the only record of a work by an individual, institution, or agency. This is, after all, a loss through technological decay or mishap, probably unintended or unanticipated by the work's creator.

I consider the genre of gray literature overall just as informationally useful as is traditionally published literature; much of it is plain facts and data that publishers would not find cost-effective in production and distribution through conventional channels. (Light gray literature does not come under the purview of THE GRAND CANON, although it will run as a current through research efforts conducted in the future; it will always be present.) There are as well problems in gray literature about the integrity and reliability of data, or biases, contained in the documents, often having not weathered the academic process of critical peer review; and for these reasons they are not always considered to be *bona fide* source materials for research. But this, too, is beyond the scope of the bibliography, whose purpose it is simply to document previous work and to provide the information by which it may be sought.

The term was first used in passing in Earle E. Spamer and Arthur E. Bogan, "Your Code or One Code?", Systematic Biology, Vol. 46 (1997), no. 4, pp. 748-750. I elaborated on its principles in Earle E. Spamer, "What a Woven Web: Archives, Websites, and the Coming Legacy of 'Light Gray Literature'", Provenance, Vol. 20 (2002) [2004], pp. 59-71.

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

# The Gray Cat at Night

THERE IS NO simple answer to the question, "What is gray literature?" There are probably dozens of definitions.<sup>4</sup> Most formal among them is a definition adopted in 1997 by the Third International Conference on Grey Literature, "The Luxembourg Convention on GL", which defines gray literature as "That which is produced on all levels of government, academics, business and industry in print and electronic formats, but which is not controlled by commercial publishers." Unfortunately, this is a sanitized vision of the genre; it does not meet the complexities that produce so many problems in cataloguing (and citing) many different kinds of gray literature.

Like the proverbial gray cat at night, gray literature is hard to identify; it is difficult to find, and, when sighted, it is often described poorly. Topically these documents can appear in any venue; even "popular articles" such as those which are commercially published for the lay reader have been labeled as gray literature.<sup>6</sup> Some definitions of gray literature exclude "nonstandard media" such as electronic documents<sup>7</sup> even though in the decade since first citing this source electronic documents now fall under every acceptable aspect of publication and production, from formal to gray (and light gray).

Gray literature is simply problematical. It contains mostly useful information, but it is not distributed in channels usually used by libraries and individuals. It is difficult to obtain, hard to properly catalogue, often peculiarly cited because it is neither book nor serial, and, completing the cycle, hard to find using another person's citation. While dutifully credited in an author's list of references, gray literature frequently differs from conventional literature because it is thrown out to the reader without any help for finding it; the reader is left to his or her own wits to be as fortunate as was the author in getting hold of it. Sometimes, authors cite gray literature on the authority of other authors who have cited it. Of course, this scenario creates its own problems when the citation formats—and the information in them—are modified to accommodate the re-citation's editorial style.

Despite problems, gray literature is hardly ignored as a subject of study. Numerous articles about it have been published, there are organizations which pursue its studies, problems and attempts to organize it, and there have been international symposia on the

Patrick Moos, "In a Little-Known Library Lies a Nationally-Recognized Collection. Brown's Demography Library Holds One of the Nation's Preeminent Centers of Population Research", The Brown Daily Herald

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

the subject. The Science, Technology and Business Division of the Library of Congress has a special section, Technical Reports and Standards Special Collections; they note in introductory comments that among its technical reports on file is "an extensive collection of foreign technical reports and other 'gray' literature"<sup>11</sup>, which seems to categorize as gray only the foreign materials in what otherwise is an area that already is widely regarded as being gray. The Owens Library at Northwest Missouri State University states that "Gray literature includes pamphlets from professional associations, information provided by nonprofit organizations, and technical papers created by scholars and shared among colleagues."<sup>12</sup>

Regardless of what is gray literature, being neither book nor serial and often lacking an imprint in the conventional categories of cataloguing, it also usually fails to fit the usual citation schemes. For gray literature, I have adopted a scheme of citation which captures all pertinent information that could be used to catalogue it, using as much of it as possible to create a citation in the format used by this bibliography, sometimes complexly or by appending spurious, perhaps useful, data as notes. In turn, the user searching for the item may have to work with librarians to establish just how a particular document may have been catalogued in their—or other—libraries.

Gray literature varies tremendously also in its outward appearance, and this seems to have a kind of subliminal influence on whether it is perceived as "legitimate" or "scholarly". Some of it may be bound for durability and aesthetics; some may be held together by spiral wire, plastic combs, or heat-fused plastic strips; some of it may be drilled for use in loose-leaf binders; and some of it may be saddle-stitched, side-stapled (with or without taping around its "spine", with or without separate cover leaves), or just simply stapled in one corner. Some kinds of gray literature may be indistinguishable from memoranda; other kinds may be mistaken for books. (Readers may correctly make the point, too, that some of these descriptions can also be applied to some publications from commercial, scholastic, and private publishers, thus diffusing the physical distinction

(http://www.theherald.org/issues/111898/library.f.html [the "theherald.org" doman is no longer valid; the newspaper's newer web address no longer posts its back issues online (http://www.browndailyherald.com/)]). The item referred to here, posted to a former version of *The Brown Daily Herald* website, noted that the story originally appeared in the issue of Wednesday, November 18, 1998. As is virtually always the case with Internet-posted documents reformatted from documents originally published in the print medium, a bibliographically proper citation cannot be made from it because it lacks page numbering of the original article; the resulting imprecision of locating quotations is at best unsettling. A related distasteful situation is the result of incomplete credits, where an author posts on a website what obviously is a previously published article but fails to fully credit its source.

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

between conventional and gray literature.) There is no common denominator as to just what is a gray document other than the confusion it provides to all of the people who either store it or must find it again.

The advent of what once was called "table-top" publishing that arrived with the personal computer and printer, and the photocopier, expanded the volume of gray literature. Where before if it was not traditionally printed, it was reproduced by mimeograph or ditto machine, neither method efficient for large numbers of copies; now it can be economically and reliably run off by the thousands even without the outside help of commercial printers and business-copying franchises—although now pay attention to the burgeoning "on-demand" printing industry and the flock of authors who come into its fold, further graying the field of what is a "publication".

# **Gray Literature in THE GRAND CANON**

In this bibliography, gray literature largely includes scientific field guides produced for conventions and symposia, the results of ongoing or "final reports" of environmental or legislatively directed investigations, and all kinds of government documents that are not parts of regularly published series. Despite the label of "gray literature" I treat all of these as publications. I cannot any more look at gray literature as second-rate than I can privately published, self-distributed books, of which many are cited in THE GRAND CANON. The only screening process that I have applied is that the document must have been made available in multiple, identical copies, and made available to those who wish to have access to it (that is, officially "secret" or similarly classified productions of government agencies would be excluded; then again, they would not likely be known to me anyway). Manuscripts and memoranda do not meet this criterion. Publications posted only to internet sources and otherwise not arranged as discrete publications, are specifically excluded, too, because of the problems of assuring that they will always be available.

Even in the earliest stages of this bibliography, in the late 1970s, the gray literature citation was a pressing concern. Identifying just what it is was something I had to learn by doing, and only much later did I discover that in the past couple of decades it has become a widely recognized and studied concern of librarians, information specialists, and researchers. Where it was showing up in the literature seemed to have no direct bearing on its content or on its reliability; it was being cited for the most part "on the fly"; often, those who cited it seemed to have special sources for their material because it just was not showing up in the places I was turning to find it. Debachere called gray literature "a fuzzy set that is irregular and variable." She continued, "On the one hand, it spills over in areas that remain uncontrollable for a long time, such as meeting reports, associative publications, or

<sup>&</sup>lt;sup>13</sup> M. C. Debachere, "Problems in Obtaining Grey Literature", IFLA Journal, Vol. 21 (1995), no. 2, p. 94.

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

even private publications, which are clearly in the confidential or private domain. On the other hand, it enters into published literature, the existence of which is hence known by libraries, such as the proceedings of meetings."

This is not always as clear as it seems. There are the International Geological Congresses, major conventions which have met somewhere in the world about every four years since the 1880s. In one respect the congresses' *Compte-Rendu* (when the standard meeting language was French) or the *Abstracts* or *Proceedings* (when the standard meeting language became English) are serials; they are usually easily found in a library's catalogue, even if there is a cross-reference between the French and English titles, "Congrès Géologique International" and "International Geological Congress". Another example, a little less easy to find, is the *Transactions and Proceedings Series* of the U.S. National Park Service, irregular in date, which in turn encompasses many separately published volumes that can as well be catalogued by their individual titles; for example, the *Proceedings of the Third Biennial Conference of Research on the Colorado Plateau*, which in turn can be located also by its informative but less used document number, "NPS/NRNAU/NRTP-97/12".

Other meeting volumes are more problematical, such as *Proceedings of the Fossils of Arizona Symposium*, which not only is not periodic but its proceedings volume received very limited distribution. (Indeed, because distribution was primarily to those in attendance means that few if any such documents wind up catalogued in a library, because many libraries balk at the prospect of taking in "donations" of such documents buried in the accumulata of researchers who either are cleaning their offices or from the effects of those who have died.) Or then there is the instance of *Colloque sur la Stratigraphie du Carbonifère* held at the Université de Liège and published as volume 55 in its irregular series, "Les Congres et Colloques de l'Université de Liege". In each case, there are different key words that can be selected as the primary name for cataloguing.

The reader should try to locate in this bibliography these citations using the information given above. Imagine, then, the problems inherent in looking for these documents in a library catalogue whose cataloguing scheme, digital or not, may not well accommodate these kinds of documents. Imagine, too, finding these titles by handsearching in a library's older card file. And what of those libraries who may have these materials, cataloged or not, but which do not contribute to the globally available library catalogs online? These problems and a special example of "minimum cataloging" is outlined by Bichteler, who asks, "If the major research libraries don't contribute cataloging records for gray literature to the networks, who will?" Without quick and easy access to large segments of gray literature, users are left to the traditional grunt work of handsearching 15—I call it

Julie Bichteler, "Geologists and Gray Literature: Access, Use, and Problems", Science and Technology Libraries, Vol. 11 (1991), no. 3, pp. 39-50.

 $<sup>^{15}</sup>$  The term "handsearching" was brought to my attention in "How Can I Participate?" in the Cochrane

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

"browsing"—which for a long time yet may still be the most effective way. In fact, bibliographies such as the present one will compound the problem further, by providing references to gray documents, but cannot provide the means by which to let the user find them in libraries. The overall problem is not as extreme as it was even a decade ago thanks to the widespread advances of web resources, but the nuances of cataloging and retrieval remain.

In almost every case I met in this bibliography, gray literature was "non-conventional", to use one phrase of description given to this kind of literature. But it is clear, in the context of this bibliography, that there are two main categories of gray literature beyond that of purely administrative documents: geological and environmental. The part of the bibliography on Administration is also filled with gray literature, but it should not come as a surprise that there should be so much of it in this category. There is a similarly obscure subset of archaeological literature, too, which fits the criteria of grayness, <sup>16</sup> but much archaeological literature in turn is so-called "black literature"—classified—given its locality-sensitive content. (For discussion of the shades of informational categories, see in Stefik. <sup>17</sup>) Such exclusionary literature cannot be cited here; it is superfluous to the research community because of restrictions on its availability.

# **Geological Gray Literature**

GRAY LITERATURE has long been a specifically peculiar problem among geologists because they are a much more socially- and geographically-integrated group. Lest one jump on this remark as being elitist, I will simply point out that, by far more than do other scientists, geologists routinely gather not only to meet and discuss, but also to conduct field excursions to places of special interest and problems. The field trip has been *de rigueur* in geology since the birth of modern geology in the 1700s (although in earlier times, even in ancient times, the field trip was often a solo endeavor by curious academics). Field trip guidebooks abound; included in them often are road logs with which other researchers can retrace the routes on their own. The accompanying explanatory texts and conjectural discussions will not likely be found anywhere else. Separate maps are sometimes a part of these documents, which are an entirely different problem to librarians and to those who

Collaboration, http://www.compmed.ummc.ab.umd.edu/compmed/cochrane\_collaboration/cmpart.htm. [Revised URL: http://www.cochrane.org/handbook/6221-handsearching (accessed 26 November 2011).]

For example, some reports can be located in the Reports Module of the National Archeological Database, <a href="http://cast.uark.edu/other/nps/nadb/">http://cast.uark.edu/other/nps/nadb/</a> wherein gray literature is defined as documents that are "unpublished, uncataloged, and have limited circulation". [URL remains valid; accessed 26 November 2011; access on 10 December 2021 redirects to a generic link for University of Arkansas "archived" resources.]

Mark Stefik, Internet Dreams: Archetypes, Myths, and Metaphors (MIT Press, Cambridge, Massachusetts, 1996), 412 pp.

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

wish to obtain photocopies or electronically derived copies<sup>18</sup>; the problems are more magnified when these large, folded maps are printed in color, which is less an aesthetic concern than it is a very specifically important way of conveying a great deal of geological information. All of these factors contribute to field trip guidebooks being "orphans", which "may not be shelved or catalogued"<sup>19</sup>.

Ironically, these kinds of documents are sometimes superior to those which are more traditionally published either under the imprint of a recognized journal or national or international organization. Bichteler indicated specifically that "guidebooks are the best and most recent source of information of the geology of a very specific area, thus they are in high demand."<sup>20</sup> But with limited distribution, such as noted above, they fail to wind up in the repositories that can best serve those who need to find them. Bichteler also quoted Rosalind Walcott who depicted these "sneaky, fly-by-night, changecoat publications [as] hard to identify, hard to acquire, hard to catalog and retrieve, and hard to preserve."21 What neither of these authors noted is that, even when the contents of these kinds of publications are peer reviewed prior to publication, they also sometimes contain information which is purely conjectural, as a means of promoting discussion and as a defense of particular views of geology as researched in the field; more specifically, in the real-time environment of field trips, with the field guides serving as a syllabus. Some such articles, for example, appeared in the field trip guidebook for Colorado River trips through Grand Canyon sponsored by the 28th International Geological Congress.<sup>22</sup> (Incidentally, the lastmentioned publication was distributed in comb-bound volumes to members of the field trips, but was otherwise sold as perfect-bound books at the congress in Washington, D.C., and through the mail by the publisher, the American Geophysical Union. The perfect-bound version, although identical to the comb-bound one, has the outward appearance and feel of a book that is more likely to be more properly maintained—and cataloged.)

Even today's mammoth and ever-growing Google Books effort, which is making available on the web millions of digitally scanned books, periodicals, and other catalogued documents, is not without its own problems of accessibility. Due to copyright concerns, some of these documents are not yet viewable online. Of those that are available, oversized pages (fold-outs and the like) are bypassed as part of the scanning process, a procedure that does not make the whole document available, forcing those who do need to see that passed-over material to find a physical copy anyway.

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

In related matter on gray literature from this same geological congress, another volume (perfect-bound), limited to 300 copies, was independently prepared for these field trips by Spamer.<sup>23</sup> It was distributed to the members of the field trip and afterwards sold by its producer, the Department of Malacology, Academy of Natural Sciences of Philadelphia, as part of its irregular "Miscellaneous Publications" series, *Tryonia*. But owing to problems of citing gray literature, it has since been variously cited as "*Tryonia*", as "Miscellaneous Publications" (of the department), and as the adjunctive, invented series title (it was an administrative justification for its production), "Contribution of the Invertebrate Paleontology Section, no. 1" (of which, incidentally, there has only been one). In cataloging this item, it would seem that the variations of typography, by which important and less-important information is displayed, is ignored in favor of "what seems to be" pertinent information from the cover or title-sheet.

Geology does seem to stand out from other sciences in that there are more detailed discussions of work in progress, and more open sharing of information, than there are in other scientific fields. In 1964 there was a symposium in Flagstaff, Arizona, on the geological history of the Colorado River. Its proceedings volume offered brief analyses and commentaries stemming from the convocation, focusing on the history of the Colorado River in Arizona.<sup>24</sup> Despite its having been published as part of the Museum of Northern Arizona's *Bulletin* series, its relative scarcity made it seem in coming years as if it were part of the gray literature genre. In 2000 a second, formal symposium on the same subject was held at Grand Canyon; its proceedings volume was published by Grand Canyon Association as part of its *Monograph* series, not without its own hiccups in citation.<sup>25</sup> Then in 2010 an informal follow-up workshop was held in Flagstaff.<sup>26</sup> Its abstracts, posted to a secure website, comprise both true gray literature and a prime candidate for light gray literature.<sup>27</sup> The abstracts were in turn, some with revisions, produced for the Open-File series

Earle E. Spamer, "The Development of Geological Studies in the Grand Canyon; Prepared for the 28th International Geological Congress Colorado River Field Trips Through the Grand Canyon, Lees Ferry to Temple Bar, Lake Mead, Arizona, June-July 1989", *Tryonia* (Academy of Natural Sciences of Philadelphia, Department of Malacology, Miscellaneous Publications), no. 17 (1989) (Contribution of the Invertebrate Paleontology Section, no. 1), 87 pp.

Edwin D. McKee, Richard F. Wilson, William J. Breed, and Carol S. Breed (eds.), "Evolution of the Colorado River in Arizona; an Hypothesis Developed at the Symposium on Cenozoic Geology of the Colorado Plateau in Arizona, August 1964", Museum of Northern Arizona, Bulletin 44 (1967), 67 pp.

Richard A. Young and Earle E. Spamer (eds.), Colorado River: Origin and Evolution: Proceedings of a Symposium Held at Grand Canyon National Park in June, 2000 (Grand Canyon, Arizona: Grand Canyon Association, 2001), 280 pp. (Grand Canyon Association, Monograph 12.) [The volume carries the copyright date 2001, and the Library of Congress cataloging date 2003, but was not released until July 2004. It has traditionally been cited with the 2001 date, which more closely reflects the date of the 2000 symposium, even though strict bibliographical applications focus on the actual publication date.]

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

of the U.S. Geological Survey; but the document is available only on the web—again, both gray and light gray literature.<sup>28</sup>

The kinds of geological gray literature that show up in great numbers in THE GRAND CANON as might be expected are those from the U.S. Geological Survey; specifically, its informal series, *Open-File Reports*. (State geological surveys also produce such on-file reports.) These are precisely what the name says: they are not part of traditional publication series such as the USGS's *Bulletin* and *Professional Paper* series—or even the formally published map series, *Miscellaneous Investigations*. The *Open-File Reports* are reports of field investigations, whether texts, maps, or both, that are reproduced either in small quantities or on an as-needed basis (although today most of the *Open-File Reports* are accessible online). Such limited distribution is driven by economic concerns, and indeed, as one moves from a more financially flush period before the 1970s to the present, the number of such documents increases tremendously. Fortunately, the USGS distribution network is easy to access now<sup>29</sup>, and these documents are no more harder to obtain than are the principal series, the exception being that the oldest such materials are not included and must be sought out the old-fashioned way, by hunting, with help, and occasionally with luck.

Many of the USGS *Open-File Reports* cited in THE GRAND CANON are maps. Again, geology is a very geographically- and visually-oriented field of science, and the geologic map is a unique way to convey a great deal of information. With some maps, geologists can also derive a three-dimensional image of geological structure in a region. This is admittedly a means of communication specific to geologists, but one so important that it demands its own section in THE GRAND CANON. Map data are now being made available in electronic formats, with which maps can be produced by the user, if the user has the appropriate equipment.<sup>30</sup> There will for a long time yet still be a need for the large, paper map, and the only economic way of making it available will be to "open-file it"; and today that means in

digital format. It should be noted that until the advent of digital production such maps were not usually produced in color; increasingly, only those which have been preapproved for publication in one of many formal map-publication categories are published in colors.

# **Environmental and Administrative Gray Literature**

Environmental studies embrace a hugely diverse number of topics, ranging from organismal biology to physical and chemical aspects of waters and the atmosphere. So often the organismal and other studies are interrelated that I group them together in this discussion, but I segregate them in the topical parts of the bibliography in response to researchers' needs.

In the Grand Canyon region, as well as everywhere, environmental studies have shifted from individual and institutional initiatives to programs of research that are administratively managed by legislative or judicial mandate or with the official sanction of government oversight agencies (for example, the National Park Service). Comprehensive results of scientific research are being recorded and publicly distributed in summary reports and environmental impact statements, while the traditional scholarly journals usually publish more focused and interpretive aspects of research.

Modern administrative directives provide for meticulously documented studies of the predicted impact that changes to the landscape or its use will have on the quality of the environment and the impacts such changes may have on human endeavors. This has created a bewildering panalopy of documents—preliminary, final, and revised—that provide administrative direction and remedial courses of action in response to a multitude of implementary scenarios. These documents also provide all kinds of environmental data that not only provide the basis for making evaluations, but also capture present conditions for many aspects of the environment.

Management documents within the gray-literature genre can range from the aesthetic qualities of "quiet" in the national park, as impacted by low aircraft overflights<sup>31</sup>

For example, U.S. Federal Aviation Administration, *Written Reevaluation; Notice of Clarification; Environmental Assessment; Special Flight Rules in the Vicinity of Grand Canyon National Park* (U.S. Federal Aviation Administration [Washington, D.C.], 1997), 30 pp., appendices. (Prepared by William J. Marx, Ann M. Hooker, Ernestine Hunter, Jake A. Plante, Gregg G. Gleming, Amanda S. Rapoza, John R. D'Aprile, Paul G. Gerbi, Fred B. Bankert, William J. Willkie, Kimberly C. Hughes, Wendi L. Baldwin, and Mylinda H. Green [cf. pp. 27-30]. [First leaf is transmittal sheet signed by Reginald C. Matthews. Received accompanied by 34-page document headed: "4910-13 / Department of Transportation / Federal Aviation Administration / 14 CFR Parts 91, 93, 121, and 135 / [Docket No. 28537; Amendment Nos. 91-253, 93-73, 121-262, Special Flight Rules in the vicinity of Grand Canyon National Park [square bracket not closed] / Agency: Federal Aviation Administration (FAA), DOT / Action: Notice of clarification: request for comments. Dates: Comments must be received on or before (insert 60 days from date of publication)". Apparently a draft of item to appear in the Federal Register, but with signature of John S. Walker, hand-dated 27 October 1997.]

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

or outboard motors on the Colorado River<sup>32</sup>, to the impact of human visitation of historic sites on breeding populations of bats<sup>33</sup>. Other documents address concerns usually beyond the immediate notice of the park visitor; for example, sewage management.<sup>34</sup>

Present concerns in the national park relate to environmental aesthetics such as natural quiet and to such problems of visitation as overcrowding. (When this essay was first written in the 1990s, these were current concerns; they still are.) There are a great many articles that pertain to these issues, and they increase in number; a variety of plans are in the process of implementation or under study. These include all kinds of Environmental Assessment documents, Management Plans, Findings of No Significant Impact, Records of Decision, and so forth. These documents may be released separately as a matter of public record (such as those cited above), publicly posted as a matter of legal announcements in the *Federal Register*<sup>35</sup>, or formally published in a book that is intended to serve as research documentation of the evaluation process<sup>36</sup>.

Interestingly, research conclusions published under a formal imprint such as the National Academy Press would otherwise be considered gray literature without the imprint. This book is perfect-bound, has the appearance of a book, and is available by purchase from the publisher. On the other hand, a similarly crafted book<sup>37</sup> is as well documented and produced, but it lacks an imprint and is available from the Commission (upon request without charge) or from the National Technical Information Service (with a charge). The overall purpose of each product is the same, but the cachet of a well known

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

publisher, such as the publications arm of the National Academy of Sciences, seems to elevate such documents from the category of gray literature.

By and large, the majority of environmental gray literature is that of government agencies. It is therefore easy to make the assumption that most of these documents will also have peculiarly segmented citations, reflecting the arrangement of pertinent information on the cover pages of these documents, that the authorship credit may be to a confoundingly bureaucratic string of commissions and committees, and that titularly similar documents may exist. (This is not always the case. One of the most important gray literature documents of recent years for the region of interest here is the *General Management Plan and Environmental Impact Statement* for Grand Canyon National Park.) Not only is the topic of great significance to the administration of the national park and the public's use of the lands, but the documents themselves, while having concise information on their cover sheets, are samples of nearly everything that makes them difficult to catalogue and cite.

The *Draft General Management Plan and Environmental Impact Statement* (GMP–EIS)<sup>39</sup> was published as a wide, greatly detailed, oversized ( $11 \times 17$  inches) wire spiral-bound document (<u>illustrated at the start of this essay</u>). The *Final General Management Plan and Environmental Impact Statement*<sup>40</sup>, instead of reprinting this cumbersome document as

Compare these two documents: **(1)** U.S. Federal Aviation Administration, *Written Reevaluation: Notice of Clarification: Environmental Assessment: Special Flight Rules in the Vicinity of Grand Canyon National Park* (U.S. Federal Aviation Administration [Washington, D.C.], 1997), 30 pp., appendices. (Prepared by William J. Marx, Ann M. Hooker, Ernestine Hunter, Jake A. Plante, Gregg G. Gleming, Amanda S. Rapoza, John R. D'Aprile, Paul G. Gerbi, Fred B. Bankert, William J. Willkie, Kimberly C. #### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

a revised and updated edition, simply listed by line number all the revisions to be applied to the Draft GMP-EIS; it is printed on conventionally sized paper ( $8\frac{1}{2} \times 11$  inches) with card-stock covers, side-stapled with three heavy-duty staples. Libraries may store these two documents in separate places because of the differences in size and binding. An author who cites just the Final GMP-EIS does a disservice to all those who need to examine the document because the Draft GMP-EIS is—unusually—a part of the final documentation. The Final GMP refers specifically to the Draft GMP-EIS, and the two must be used together. This relationship may not be caught in cataloguing the Final GMP-EIS, and it is feasible, too, that the Draft GMP-EIS could be discarded by a less attentive librarian in light of there being a "final" version.

Other gray-literature documents are workshop proceedings. These are most likely to be among the most confusing to catalogue because the cover data are not necessarily easily categorized. One example of a problematical citation from a workshop proceedings adds the peculiarity of an unconventional authorship. This example fails to clearly identify the issuing agency, avoids listing authors by name but instead lists them by their titles and functions, and carries the date it was prepared as well as the date it was distributed. Some of the data are interpreted from other evidence in the volume. The user can thus see just how differently this citation can be listed in references and how many different ways there can be to catalogue it. On the other hand, some such workshop proceedings are much more clearly cited thus they will be likely to be found more quickly in a catalog.

The Glen Canyon Environmental Studies, in fact, probably produced the most wideranging group of gray literature and conventional literature combined. (The name referred to Glen Canyon Dam, while its research was conducted principally downstream through lower Glen, Marble, and Grand Canyons.) It was an important research program, conducted in phases over two decades, embracing physical, biological, and environmental sciences, archaeological surveys, and issues of concern to Native Americans and recreational industries, and socio-economic studies. A first comprehensive overview was compiled by

U.S. Forest Service, 1995), 179 pp. [This item refers to line changes in the Draft plan; see the oversized document cited just above.]

<sup>&</sup>lt;sup>41</sup> Glen Canyon Environmental Studies Senior Scientist, Glen Canyon Environmental Studies Program Manager, and a small group of scientific experts, "Interim Flows for Grand Canyon; Recommendations for Interim Operating Procedures for Glen Canyon Dam", separately paginated section in *Long-Term Monitoring Workshop for the Grand Canyon, October 5-6, Irvine, California* (National Research Council, Water Science and Technology Board, 1992), 19 pp. [Document dated 1991, prepared for U.S. Bureau of Reclamation and GCES cooperating agencies, from Center for Environmental Studies, Arizona State University.]

<sup>&</sup>lt;sup>42</sup> Grand Canyon Trust, with U.S. Bureau of Reclamation, The Colorado River Workshop: Issues, Ideas, and Directions: February 26-28, 1996, Phoenix, Arizona. Proceedings Report (Grand Canyon Trust, Flagstaff, Arizona, 1996), 256 pp.

#### HOW MANY VOICES UNHEARD? THE CHOIR OF GRAY LITERATURE IN BIBLIOGRAPHY

the U.S. National Research Council<sup>43</sup>, but the studies continued for another decade to culminate in an Environmental Impact Statement for the operation of Glen Canyon Dam<sup>44</sup>. The amount of conventionally published research and discussion on GCES-related topics is tremendous. But so much exists just among preliminary and final reports from principal investigators, filed with GCES, that it has been worthwhile to include in THE GRAND CANON a separate part listing these documents, compiled by Richard Quartaroli who then was the research librarian for the Glen Canyon Environmental Studies program.<sup>45</sup>

### **Conclusion**

THAT THE FORMULATED citations in some parts of THE GRAND CANON are so broken up by "less tidy" citations of gray literature is testimony to the pervasive and persuasive importance of such products. One can get a feel for it just by browsing, particularly in the parts on Administration, Environment, and Geology. I hope that the very few examples in this discussion show the reader that no bibliography can adequately cover the gigantic volume of material that can be found only in the most specialized and comprehensive collections; though it may try. To try to gather it all would be a prodigious task, one calling for the extended periods of time of many capable searchers. I hope, too, that the examples that do appear throughout THE GRAND CANON bring to light the problems of something even as simple as citing gray literature, that even the most capable of bibliographers will resort to invention; the same, too, with writers when they cite these items. This is what makes bibliography both art and science—not to mention the fixation of "inspired idiots". 46

The RAVEN'S PERCH MEDIA colophon recalls this bird's habit of gathering and caching objects. Derived from original artwork by Balduin Möllhausen, it is a fine detail from the lithograph delineated by J. J. Young that is "General Report Plate VII" in Joseph C. Ives' Report Upon the Colorado River of the West, Explored in 1857 and 1858 (Washington, 1861), which depicts a wintry camp just south of the Grand Canyon. The scene was sketched and described by Möllhausen on April 10, 1858, while he was perched in a nearby tree. He noted (in translation here), "a couple of ravens [paar Raben] croaked morosely on the bare branches of a dried-up fir tree as they waited impatiently for our departure, so that they could scout around the abandoned campsite for fat morsels." (Möllhausen, Reisen in die Felsengebirge Nord-Amerikas bis zum Hoch-Plateau von Neu-Mexico, unternommen als Mitglied der im Auftrage der Regierung der Vereinigten Staaten ausgesandten Colorado-Expedition. Hermann Costenoble, Leipzig, 1861, Vol. 2, p. 83.) Möllhausen's original watercolor painting is now in the Amon Carter Museum of American Art (Fort Worth, Texas; <a href="https://www.cartermuseum.org/collection/character-high-table-lands-1988146">https://www.cartermuseum.org/collection/character-high-table-lands-1988146</a>).

Raven's Perch Media was created in 2018, but Möllhausen's remarks on this very scene were not discovered until the translation was made for *Möllhausen's Grand Canyon*, another Raven's Perch Media production (2022).

#### **About the Author**

My first field of study was geology at Rutgers University in the 1970s. For several years afterward I was in commercial publishing, writing about computer technology — before personal computers. In the early '80s I began an established period of employment in natural history study collections, first at the New Jersey State Museum, then in the Academy of Natural Sciences of Philadelphia. My 18 years in the Academy's employ began in 1986; before that I had been for 12 years a student research assistant and volunteer there. While on staff I was at various times a collection manager in several departments and collections — invertebrate paleontology, paleobotany, mineralogy, malacology, general modern invertebrates (a collection of organisms other than mollusks, insects and arachnids), diatoms, and modern botany; and continued to volunteer in vertebrate paleontology. My publications have embraced each of these fields — as well as historical and

bibliographical topics about the Grand Canyon and Colorado River regions. Concurrently, for seven years I was editor and managing editor of the Scientific Publications branch of the Academy, which publishes peer-reviewed articles and monographs from authors around the globe in America's oldest uninterrupted line of serials on natural history, from 1817. My last five years at the Academy was as its Archivist, for which I had studied in the graduate program of Temple University's Department of History. On leaving the Academy in 2005 I continued my affiliation as an elected Research Associate. For the next 14 years I was Reference Archivist in the research library of the American Philosophical Society, a polymathic institution in Philadelphia founded in 1743 by Benjamin Franklin, whose staff supports the society's membership, visiting researchers from around the world, and graduate level researchers on society fellowships. Since November 2018 I am enjoying an active retirement continuing all of these interests.

Following two visits to the Grand Canyon in 1974 that included my first canyon hikes, I began work on a bibliography of the canyon and the lower Colorado River country. In 1981, the Grand Canyon Natural History Association (now the Grand Canyon Conservancy) published the first edition as a part of its new Monograph series of scholarly publications. A second edition appeared in 1990, with a supplement in 1993. In January 2000, a completely revised bibliography was placed on the Association's website, with its own URL, as a searchable database. Frequently updated, it was discontinued in 2021. In 2012, I privately published the first edition of *THE GRAND CANON*, a much-embellished resurrection of the print monograph, in digital format (PDF) that can be viewed in book layout on-screen or printed to paper. The fifth edition (2025), significantly revised, embraces the 16th to 21st centuries and now cites 111,000 items in 115 languages. (The separate *Cartobibliography* includes citations for maps of this period, with extensive chorographical notations.)

In 1989, the 28th International Geological Congress convened in Washington, D.C., which also offered an ambitious series of field trips across the United States, two of them on the Colorado River through Grand Canyon. My first river trip was with an IGC group. In 1990, I began working as a geology interpreter on yearly summer trips in Grand Canyon with a Colorado River outfitter, continuing this until 2001. I participated in two scientific study trips through the canyon under the Glen Canyon Environmental Studies program administered by the U.S. Bureau of Reclamation, on one of which I prospected for living mollusks, the first such investigation ever to have been made along this canyon river. In 1994, I had attended a Penrose Conference sponsored by the Geological Society of America, "From the Inside and the Outside: Interdisciplinary Perspectives on the History of Earth Science." This conference for the first time brought earth scientists and historians together to discuss how each group approaches research in these complementary fields; from it I developed new perspectives in my research activities, which extended into revisions of the Grand Canyon-Lower Colorado River bibliography. In 2000, I attended a geology symposium at Grand Canyon on "The Colorado River: Origin and Evolution," the proceedings of which were edited by Richard A. Young and me. In 2012 I was honored with the annual Pioneer Award from the Grand Canyon Historical Society. Among many affiliations I hold life memberships with the Grand Canyon Conservancy, the Grand Canyon River Guides, and the Arizona–Nevada Academy of Science.
